*Innovation and the Development of Flight* Roger D. Launius, 1999 Perhaps no technological development in the century has more fundamentally transformed human life than the airplane and its support apparatus The nature of flight and the activities that it has engendered throughout the world makes the development of aviation technology an important area of investigation Why did aeronautical technology take the shape it did Which individuals and organizations were involved in driving it What factors influenced particular choices of technologies to be used More importantly how has innovation affected this technology *Innovation and the Development of Flight* a first strike at the new aviation history represents a significant transformation of the field by relating the subject to larger issues of society politics and culture taking a more sophisticated view of the technology that few historians have previously attempted This volume moves beyond a focus on the artifact to emphasize the broader role of the airplane and more importantly the entire technological system This suggests that many unanswered questions are present in the development of modern aviation and that inquisitive historians seek to know the relationships of technological systems to the human mind Some of the subjects discussed are early aeronautical innovation and government patronage the evolution of relationships among airports cities and industry the relationship of engine development to the entire aviation industry the Department of Commerce's influence on light plane development pressure in the Air Force for the development of jet engines and lessons of the National Aerospace Plane Program Aviation historians and historians of technology will find *Innovation and the Development of Flight* a valuable examination of aeronautical innovation providing foundations for continued explorations of this field **The Modern Airliner** Peter W. Bilstein, Roger Bilstein, 2008-12-01 From 1918 to 1929 American aviation progressed through the pioneering era establishing the pattern of its impact on national security commerce and industry communication travel geography and international relations In America as well as on a global basis society experienced a dramatic transformation from a two dimensional world to a three dimensional one By 1929 aviation was poised at the threshold of a new epoch Covering both military and civil aviation trends Roger Bilstein's study highlights these developments explaining how the pattern of aviation activities in the 1920s is reflected through succeeding decades At the same time the author discusses the social economic and political ramifications of this robust new technology Aviation histories usually pay little attention to aeronautical images as an aspect of popular culture Thoughtful observers of the 1920s such as Stuart Chase and Heywood Broun considered aircraft to be an
