Deep Fields S. Cristiani, Alvio Renzini, R. Williams, 2001-12 This book is a synopsis of modern deep field astronomy based on the powerful telescopes and instruments developed in recent years It is organized along topical themes such as the extragalactic background radiation at different wavelengths the evolution of galaxies the history of star formation the nature of absorbers the reionization of the intergalactic medium the validity of photometric redshifts gravitational lensing and clustering of galaxies Stellar and substellar objects were not neglected however and one session was devoted to nearby bodies such as trans Neptunian solar system objects brown dwarfs and stars with special characteristics Stellar Populations Piet C. van der Kruit, Gerry Gilmore, 2013-12-01 The concept of Stellar Populations has played a fundamental role in astronomy in the last few decades It was introduced by Walter Baade after he was able to resolve the Andromeda Nebula and its companions into stars when he used red sensitive plates and realised that there were two fundamentally different Hertzsprung Russell diagrams in our and these nearby galaxies common stars in the solar neighborhood versus globular clusters This result was published in two papers in 1944 in volume 100 of the Astrophysical Journal Subsequent research gave the concept a much firmer basis and at the famous Vatican Symposium of 1957 resulted in a general scheme of the concept and a working hypothesis for ideas on the formation and evolution of the Galaxy This has been a guiding principle of studies of our and other galaxies for decades Some years ago it seemed to us appropriate to commemorate Baade's seminal work in 1994 when it would have its 50 th anniversary and to review its present status and also its role in contemporary understanding While we were in Leiden for an administrative committee we discussed the matter again and over beers on October 29 1991 we decided to take the initiative for an IAU Symposium on the subject during the 1994 IAU General Assembly in Den Haag the Netherlands Literature 1988, Part 2 Astronomisches Rechen-Institut, 2013-06-29 From the reviews Astronomy and Astrophysics Abstracts has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Reviews 1 Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes The Observatory Magazine 2 *Reports on Astronomy* Immo Appenzeller, 2012-12-06 IAU Transactions are published as a

volume corresponding to each General Assembly Volume A is produced prior to the Assembly and contains Reports on Astronomy prepared by each Commission President The intention is to summarize the astronomical results that have affected the work of the Commission since the production of the previous Reports up to a time which is about one year prior to the General Assembly Volume B is produced after the Assembly and contains accounts of Commission Meetings which were held together with other material The reports included in the present volume range from outline summaries to lengthy compilations and references Most reports are in English The Galactic and Extragalactic Background Radiation International Astronomical Union. Nonlocal Gravity Bahram Mashhoon,2017-05-05 Relativity theory is based on a postulate of locality which means that the past history of the observer is not directly taken into account This book argues that the past history should be taken into account In this way nonlocality in the sense of history dependence is introduced into relativity theory The deep connection between inertia and gravitation suggests that gravity could be nonlocal and in nonlocal gravity the fading gravitational memory of past events must then be taken into account Along this line of thought a classical nonlocal generalization of Einstein's theory of gravitation has recently been developed A significant consequence of this theory is that the nonlocal aspect of gravity appears to simulate dark matter According to nonlocal gravity theory what astronomers attribute to dark matter should instead be due to the nonlocality of gravitation Nonlocality dominates on the scale of galaxies and beyond Memory fades with time therefore the nonlocal aspect of gravity becomes weaker as the universe expands The implications of nonlocal gravity are explored in this book for gravitational lensing gravitational radiation the gravitational physics of the Solar System and the internal dynamics of nearby galaxies as well as clusters of galaxies This approach is extended to nonlocal Newtonian cosmology where the attraction of gravity fades with the expansion of the universe Thus far scientists have only compared some of the consequences of nonlocal gravity with astronomical observations *Reprints - National Radio Astronomy Observatory, Green Bank, W. Va National Radio Astronomy Observatory (U.S.),1975* Hubble Space Telescope Space Telescope Science Institute (U.S.),1992 **Galactic Bulges** Eija Laurikainen,Reynier Peletier,Dimitri Gadotti,2015-09-29 This book consists of invited reviews on Galactic Bulges written by experts in the field A central point of the book is that while in the standard picture of galaxy formation a significant amount of the baryonic mass is expected to reside in classical bulges the question what is the fraction of galaxies with no classical bulges in the local Universe has remained open The most spectacular example of a galaxy with no significant classical bulge is the Milky Way The reviews of this book attempt to clarify the role of the various types of bulges during the mass build up of galaxies based on morphology kinematics and stellar populations and connecting their properties at low and high redshifts The observed properties are compared with the predictions of the theoretical models accounting for the many physical processes leading to the central

mass concentration and their destruction in galaxies This book serves as an entry point for PhD students and non specialists and as a reference work for researchers in the field **Scientific and Technical Aerospace Reports**, 1991-03 Stellar Populations (IAU S262) International Astronomical Union. Symposium, 2010-04-29 IAU Symposium 262 presents reviews on the current understanding of the theories of stellar evolution galaxy formation and galaxy evolution It emphasises what we have learned in the past few years from massive surveys covering large portions of the sky e g SDSS HDF UDF GOODS COSMOS Several critical aspects of research on stellar populations deserve further effort in order to be brought in tune with other areas of astrophysical research The next ten years will see the opening of major observatories that will increase the quality and quantity of astronomical data by orders of magnitude The expected benefits from these instruments for the study of stellar populations are explored This critical review of state of the art observational and theoretical work will appeal to all those working on stellar populations from distant galaxies to local resolved galaxies and galactic star clusters

Multiwavelength AGN Surveys Ral Mjica, Roberto Maiolino, 2004 The huge amount of data obtained by surveys in all wavebands from radio to X rays has allowed major progress in the understanding of Active Galactic Nuclei and of their cosmic evolution This book contains the proceedings of a conference intended to give a broad overview of the recent results obtained by recent AGN surveys over the whole electromagnetic spectrum Topics which were discussed during the conference and are included in this volume are AGN evolution contribution to the cosmic background AGN luminosity functions in different wavebands multiwavelength properties of AGN unified model and unconventional AGN connection with the host galaxies co evolution of AGN and galaxies implications for the local density of supermassive black holes Future AGN surveys planned with forthcoming new observational facilities are also included The proceedings have been selected for coverage in OCo Index to Scientific Technical Proceedings ISTP ISI Proceedings OCo Index to Scientific Technical Proceedings ISTP CDROM version ISI Proceedings OCo CC Proceedings OCo Engineering Physical Sciences **The Dark Universe** Mario Livio, 2004-02-26 This book reviews the findings on the composition of the universe its dynamics and the implications of both for the evolution of large scale structure and for fundamental theories of the universe With each chapter written by a leading expert in the field topics include massive compact halo objects the oldest white dwarfs hot gas in clusters of galaxies primordial nucleosynthesis modified Newtonian dynamics the cosmic mass density the growth of large scale structure and a discussion of dark energy This book is an invaluable resource for both professional astronomers and graduate students *Toward a New Millennium in Galaxy Morphology* David L. Block, Iv nio Puerari, Alan Stockton, DeWet Ferreira, 2012-12-06 South Africa a land of paradigm shifts A land where we are willing to leave behind the old to bravely accept the new What do we need to exit the dark ages in the morphology of galaxies How prevalent is the cherishing of old concepts Traditional morphology has been mask oriented focusing on masks of dust and gas which may constitute only 5 percent of the dynamical mass of a galaxy Some of the world s foremost astronomers flew to South Africa to address

morphologically related issues at an International Conference the proceedings of which are contained in this volume Examine predicted extinction curves for primordial dust at high redshift Stars evolve why not dust Read about the breakdown of the Hubble sequence at a redshift of one Explore the morphology of rings the mysteries of metal rich globular clusters vigorous star formation in the Large Magellanic Cloud the world of secular evolution where galaxies change their shapes within one Hubble time And much more Examine a new kinematical classification scheme of the unmasked dust penetrated near infrared images of spiral galaxies This volume contains over 80 refereed contributions including 18 in depth keynote review articles 40 pages of questions and answers a panel discussion transcribed from tape and 24 colour plates The volume is unique in that contributions from both high and low redshift experts are represented at a level readily accessible to postdoctoral students entering the exciting world of morphology whether it be of the local or more distant Universe

Extragalactic Astronomy and Cosmology Peter Schneider, 2014-10-08 This second edition has been updated and substantially expanded Starting with the description of our home galaxy the Milky Way this cogently written textbook introduces the reader to the astronomy of galaxies their structure active galactic nuclei evolution and large scale distribution in the Universe After an extensive and thorough introduction to modern observational and theoretical cosmology the focus turns to the formation of structures and astronomical objects in the early Universe The basics of classical astronomy and stellar astrophysics needed for extragalactic astronomy are provided in the appendix While this book has grown out of introductory university courses on astronomy and astrophysics and includes a set of problems and solutions it will not only benefit undergraduate students and lecturers thanks to the comprehensive coverage of the field even graduate students and researchers specializing in related fields will appreciate it as a valuable reference work *Active Galactic Nuclei* Volker Beckmann, Chris Shrader, 2012-09-24 Active Galactic Nuclei This AGN textbook gives an overview on the current knowledge of the Active Galactic Nuclei phenomenon The spectral energy distribution will be discussed pointing out what can be observed in different wavebands The different physical models are presented together with formula important for the understanding of AGN physics Furthermore the authors discuss the AGN with respect to its environment host galaxy feedback in galaxies and in clusters of galaxies variability etc and finally the cosmological evolution of the AGN phenomenon This book includes phenomena based on new results in the X Ray and gamma ray domain from new telescopes such as Chandra XMM Newton the Fermi Gamma Ray Space Telescope and the VHE regime not mentioned so far in AGN books Those and other new developments as well as simulations of AGN merging events and formations enabled through latest super computing capabilities From the contents The observational picture of AGN Radiative processes The central engine AGN types and unification AGN through the electromagnetic spectrum AGN variability Environment Quasars and cosmology Formation evolution and the ultimate fate of AGN What we do not know yet *ISO Science Legacy* Catherine Cesarsky, Alberto Salama, 2006-06-30 Stars are born and die in clouds of gas and dust opaque to most types of radiation but

transparent in the infrared Requiring complex detectors space missions and cooled telescopes infrared astronomy is the last branch of this discipline to come of age After a very successful sky survey performed in the eighties by the IRAS satellite the Infrared Space Observatory in the nineties brought spectacular advances in the understanding of the processes giving rise to powerful infrared emission by a great variety of celestial sources Outstanding results have been obtained on the bright comet Hale Bopp and in particular of its water spectrum as well as on the formation chemistry and dynamics of planetary objects in the solar system Ideas on the early stages of stellar formation and on the stellar initial mass function have been clarified

Literature 1997, Part 1 Astronomisches Rechen-InstitutARI,2013-11-11 Astronomy and Astrophysics Abstracts is devoted to the recording summarizing and indexing of astronomical publications throughout the world Two volumes are scheduled to appear per year Volume 67 records 10 903 papers covering besides the classical fields of astronomy and astrophysics such matters as space flights related to astronomy lunar and planetary probes and satellites meteorites and interplanetary matter X rays and cosmic rays quasars and pulsars The abstracts are classified under more than one hundred subject categories thus permitting quick surveying of the bulk of material published on the same topic within six months For instance this volume records 119 papers on minor planets 155 papers on supernovae and 554 papers on cosmology
