time Hugo Award winner Ben Bova chronicles the saga of humankind's expansion beyond the solar system in *Death Wave*. In the precursor to the *Star Quest Trilogy*, *New Earth*, Jordan Kell led the first human mission beyond the solar system. They discovered the ruins of an ancient alien civilization. But one alien AI survived and it revealed to Jordan Kell that an explosion in the black hole at the heart of the Milky Way galaxy has created a wave of deadly radiation expanding out from the core toward Earth. Unless the human race acts to save itself, all life on Earth will be wiped out. When Kell and his team return to Earth many years after their departure, they find that their world has changed almost beyond recognition. Not only has a second wave of greenhouse flooding caused sea levels to rise, but society has been changed by the consequences of the climate shift. Few people want to face Jordan Kell's news. He must convince Earth's new rulers that the human race is in danger of extinction unless it acts to forestall the death wave coming from the galaxy's heart.

The Star Quest Trilogy 1 Death Wave 2 Apes and Angels **American Science Fiction and the Cold War** David Seed, 2013-10-31 American Science Fiction in both literature and film has played a key role in the portrayal of the fears inherent in the Cold War. The end of this era heralds the need for a reassessment of the literary output of the forty year period since 1945. Working through a series of key texts, *American Science Fiction and the Cold War* investigates the political inflections put on American narratives in the post-war decades by Cold War cultural circumstances. Nuclear holocaust, Russian invasion, and the perceived rise of totalitarianism in American society are key elements in the author's exploration of science fiction narratives that include *Fahrenheit 451*, *Invasion of the Body Snatchers*, and *Dr. Strangelove*.

Apes and Angels Ben Bova, 2016-11-22 Six time Hugo Award winner Ben Bova chronicles the saga of humankind's expansion beyond the solar system in *Apes and Angels*, the second book of the *Star Quest Trilogy* which began with *Death Wave*. Humankind headed out to the stars not for conquest nor exploration nor even for curiosity. Humans went to the stars in a desperate crusade to save intelligent life wherever they found it. A wave of death is spreading through the Milky Way galaxy, an expanding sphere of lethal gamma radiation that erupted from the galaxy's core twenty-eight thousand years ago and now is approaching Earth's vicinity at the speed of light. Every world it touched was wiped clean of all life. But it's possible to protect a planet from gamma radiation. Earth is safe. Now guided by the ancient intelligent machines called the Predecessors, men and women from Earth seek out those precious rare worlds that harbor intelligent species determined to save them from the doom that is hurtling toward them. The crew of the *Odysseus* has arrived at Mithra Gamma, the third planet of the star Mithra, to protect the stone-age inhabitants from the Death Wave. But they'll also have to protect themselves.

As the science advisor to a newly elected freshman senator, Jake has crafted a comprehensive energy plan that employs innovative new technologies to make America

the world's leader in energy production while simultaneously boosting the economy and protecting the environment. The facts and the science are on Jake's side but his plan soon runs afoul of entrenched special interests, well-funded lobbies, cynical bureaucrats, pork barrel politics, and one very powerful U.S. Senator. To keep his plan alive and secure a sustainable future for America, Jake needs a crash course in the way Washington really works. Everyone keeps telling him that his plan has no hope of succeeding but Jake is determined to prove them wrong even if it kills him, something that certain hostile parties may be all too happy to arrange. Transhuman Ben Bova, 2025-09-23 Six-time Hugo Award winner Ben Bova presents *Transhuman*. Plausible twenty-first century medical research, the bond between a grandfather and his granddaughter, and political power all serve to make this book a must-read for those who enjoyed *The Fugitive*. A combination of thriller, adventure, and drama will enthrall. Booklist starred review. Luke Abramson, a brilliant cellular biologist, has one joy in life: his ten-year-old granddaughter, Angela. When he learns that Angela has an inoperable brain tumor and is given less than six months to live, Abramson wants to try an experimental new therapy that he believes will kill Angela's tumor. Her parents object, and the hospital bureaucracy blocks the experimental procedure because it has not been approved by the FDA. Knowing that Angela will die before he can get approval, Abramson abducts Angela from the hospital. He plans to take her to a private research laboratory in Oregon. Luke has turned his old SUV into a makeshift medical facility, treating Angela as best he can while they are on the road, desperately trying to keep his granddaughter alive long enough to give her the treatment he believes will save her life. Abramson realizes that he's too old and decrepit to flee across the country with his sick granddaughter, so he injects himself with a genetic factor that has successfully reversed aging in animal tests. As the chase weaves across the country from one research facility to another, Luke begins to grow physically younger, stronger. He looks and feels the way he did thirty or forty years ago. But will he be able to save Angela? At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

New Earth Ben Bova, 2013-07-16 Fans of hard SF will enjoy this space adventure that follows *Farside* in the Grand Tour series from the six-time Hugo Award winner. Library Journal: "The entire world is thrilled by the discovery of a new Earthlike planet. Advance imaging shows that the planet has oceans of liquid water and a breathable, oxygen-rich atmosphere. Eager to gain more information, a human exploration team is soon dispatched to explore the planet, now nicknamed New Earth. All of the explorers understand that they are essentially on a one-way mission. The trip takes eighty years each way, so even if they are able to get back to Earth, nearly 200 years will have elapsed. They will have aged only a dozen years thanks to cryonic suspension, but their friends and family will be gone, and the very society that they once knew will have changed beyond recognition. The explorers are going into exile, and they know it. They are on this mission not because they were the best available but because they were expendable. Upon landing on the planet, they discover something unexpected: New Earth is inhabited by a small group of intelligent creatures who look very much like human beings. Who are these people? Are they

native to this world or invaders from elsewhere While they may seem inordinately friendly to the human explorers what are their real motivations What do they want Moreover the scientists begin to realize that this planet cannot possibly be natural They face a startling and nearly unthinkable question Could New Earth be an artifact Mercury Ben Bova, 2006-03-07 An industrialist builds his dreams while a disgraced scientist plots revenge in this dramatic science fiction novel by the six time Hugo Award winning author The closest planet to our Sun Mercury is a rocky barren heat scorched world But there are those who hope to find wealth in its desolation Saito Yamagata thinks Mercury s position will make it an ideal orbit point for satellites that could someday create enough power to propel starships into deep space He hires Dante Alexios to bring his dreams to life Astrobiologist Victor Molina thinks the water at Mercury s poles may harbor evidence of life and hopes to achieve fame and glory by proving it Bishop Elliot Danvers has been sent by the powerful Earth based New Morality to keep close tabs on Molina s endeavors which threaten to produce results contrary to fundamentalist teachings Three of these men are blissfully unaware of their shared history and how it ties into one of mankind s greatest tragedies Years before visionary engineer Mance Bracknell made his own attempt to help man progress into space by building a ladder to the stars a glistening tower stretching thousands of miles into the air anchored by spans of steel to a satellite in geosynchronous orbit But technological endeavor was no match for human passions and greed and jealousy provoked terrorists to an act of sabotage that resulted in the death of millions There s no telling how many more will have to die before Mance has his revenge Praise for Mercury This superior entry in one of the classic hard sf sagas going is pretty much a guaranteed crowd pleaser Booklist Bova presents a dramatic tale of ambition and vengeance coupled with an absorbing look at the inner solar system s smallest and most elusive planet Fans of the author s technological expertise and his strong prospace bias should enjoy this action packed tale Library Journal
