

A person stands on a beach, looking out at a large, bright sun over the ocean. The scene is bathed in a warm, golden light. The sun is a large, glowing orb on the horizon, and its reflection is visible in the water. The person is a small silhouette in the center of the frame, looking up at the sun. The overall mood is contemplative and awe-inspiring.

Star Within Cd:

A General Catalogue of Double Stars Within 121° of the North Pole Sherburne Wesley Burnham, 1906 **The Complete CD Guide to the Universe** Richard Harshaw, 2007-09-06 This is without doubt the largest and most comprehensive atlas of the universe ever created for amateur astronomers. It is the first major observing guide for amateurs since Burnham's *Celestial Handbook*. With finder charts of large scale and unprecedented detail in both normal and mirror image views for users of the ubiquitous Meade and Celestron Schmidt Cassegrain telescope ranges and an extensive list of 14 000 objects, it will provide a detailed observing guide for almost any practical amateur astronomer up to the most advanced. Spanning some 3 000 pages, this is a project that is possible only with Springer Extra Materials. <http://extras.springer.com> The atlas covers the whole range of objects viewable by amateur astronomers with 8 to 11 inch telescopes from latitude approx 40 degrees. The projected total number of objects is currently 13 238 compared with Burnham's approximately 5 000 double stars in three volumes. This is much more than just a catalog of objects. As planned, the atlas will have about 270 double star images and sketches and 590 or so deep sky images and sketches. Comparisons with other atlases are invidious, but Tirion's atlas and *Uranometria* for example don't go as deep in magnitude and the scale is unsuitable for star hopping in the eyepiece where the action REALLY takes place. The charts in the Complete CD Atlas of the Universe and the scale they are on allow the user to get enough detail to easily find the objects described. In addition, mirror image charts are supplied for instruments with reverse fields of view, all SCTs. This is also much more than planetarium software. Many planetarium programs do not have good object databases and those that do have databases that are too large for practical field use. For example, TheSky, one of the most popular and best programs, can display the entire Washington Double Star Catalog, some 120 000 doubles, but 90% of these are not resolvable or even viewable from certain horizons and there is no way to determine that by looking at the screen. The result is that there are more objects plotted on the screen than you can actually see and the clutter makes it very hard to find what you want. The pages on Springer Extra Materials are extensively indexed and referenced for quick location of objects, areas, classes of objects, etc. The accompanying book gives an introduction to the Atlas, showcases the maps, thus buyers can see what they are getting without visiting Springer Extra Materials. *A General Catalogue of Double Stars Within 121 Degrees of the North Pole* Sherburne Wesley Burnham, 1906 **New Quests in Stellar Astrophysics: The Link Between Stars and Cosmology** Miguel Chávez, Alessandro Bressan, Alberto Buzzoni, Divakara Mayya, 2002-09-30 Stellar astrophysics still provides the basic framework for deciphering the imprints left over by the evolving universe on all scales. Advances or shortcomings in the former field have direct consequences in our ability to understand the global properties of the latter. This volume contains the most recent updates on a variety of topics that though independent by themselves are inevitably connected on a cosmological scale. These include comprehensive articles by leaders in fields extending from stellar

atmospheres through properties of the stellar component in the Milky Way up to the stellar environment in high redshift galaxies The wide coverage of astrophysical themes makes this volume very valuable for researchers and Ph D students in astrophysics **The Astrophysical Journal** ,1915 Letters to the Editor issued as Part 2 and separately paged from v 148 1967 Beginning in 2009 the Letters published only online **The Observatory** ,1881 A review of astronomy varies **The Samaritans** Alan David Crown,1989 **The Hundred Greatest Stars** James B.
