Star Wind:

Instability and Variability of Hot-Star Winds Anthony F.J. Moffat, Stanley P. Owocki, Alex W. Fullerton, Nicole St-Louis, 2012-12-06 This specialized workshop was conceived during the workshop on Non isotropic and Variable Outflows from Stars which was held at the Space Telescope Science Institute in October 1991 At that meeting the four of us collectively decided that the time was ripe for an even more focussed discussion of the basic issues in the area of hot star wind instability and its observable manifestations Not that the big problems have been solved Rather we are currently in a phase of rapid development both with regard to the models and to the observations The key issue at this new workshop would be to decide how the time dependent structures observed in hot star winds e g NACs DACs blobs clumps filaments shells puffs jets etc relate to radiative and other instabilities Further questions concern the role of turbulence and the nature of its driver and the effect of stellar rotation pulsation and magnetic fields on time dependent phenomena in hot star winds Of no less importance is the impact of stellar wind variability on the derivation of mass loss rates on stellar evolution and on momentum energy deposition in the interstellar medium To attain our goal of maximum confrontation in the positive sense we decided 1 to limit the workshop to the observers and theoreticians most active in this field in the world 2 to insist that virtually all participants present a talk thereby avoiding the distraction of poster sessions and 3 to allocate approximately half of the allotted time to discussion

Clumping in Hot Star Winds Wolf-Rainer Hamann, 2008 [Pulsation and Mass Loss in Stars](#) R. Stalio, L.A. Willson, 2012-12-06 Stellar mass loss is an essential part of the cycling of material from the interstellar medium into stars and back and must be understood if we are to model processes on galactic to cosmological scales The study of stellar winds and the effects of stellar mass loss has reached a particularly exciting stage where observational capabilities are increasingly able to provide interesting constraints on models and theories Recent results from theoretical and observational work for both hot and cool stars with substantial winds have led to the suggestion that a combination of pulsation with other mechanisms makes for particularly efficient mass loss from stars This provided the original motivation for the organization of this workshop The conference was organized along relatively conventional lines according to the types of objects being scrutinized However the true unity of the proceedings comes from the interplay of the mechanisms involved For example for the cool luminous Mira variables pulsation leads to shock waves that extend the atmosphere enhancing dust formation radiation pressure on dust drives the wind cooling the atmosphere and in some cases suppressing the shocks Similarly for the Be stars both pulsation in this case non radial and radiation pressure due to UV resonance lines are expected to be important and this expectation is at least qualitatively borne out by the observations [Wolf-Rayet Stars](#) Karel A. van der Hucht, Peredur M. Williams, 2012-12-06 In this IAU Symposium on Wolf Rayet stars binary aspects received ample attention notably because of the recognition that many observations of spectral and photometric variability at all accessible wavelengths are related to colliding winds or other forms of wind interaction The basic structure of the conference

and its proceedings is basic parameters and general properties of WR stars state of the art model atmospheres for WR stars anisotropic mass loss and disk formation of WR stars properties of WR binaries influence of stellar winds on mass transfer in hot massive binary evolution dust formation near WR stars and other circumstellar phenomena and hydrodynamics and high energy physics of colliding winds in WR O binaries and of WR winds interacting with compact objects Within this framework 20 invited reviews 38 invited oral contributions and 76 poster papers were presented at the Symposium entertaining 111 astronomers from 24 countries These proceedings provide up to date information on all aspects of Wolf Rayet atmospheres binaries and colliding winds

The Art of Modeling Stars in the 21st Century (IAU S252) International Astronomical Union. Symposium, 2008-12-18 Stellar models are the very basic building blocks with which we build up our knowledge of the Universe New numerical experiments are heralding a new level of sophistication in our ability to model and understand how stars work This volume provides an overview and the most recent advances in modeling of stellar structure and evolution Modeling of stars relies on our understanding of the detailed physical processes happening in stars and the most recent observations of stars made by modern large telescopes and current high technologies IAU Symposium 252 presents the most recent developments in five key areas including improvements of the physical ingredients of stellar models the evolution of low and intermediate mass stars the evolution of massive stars close binary evolution and stellar physics in the era of very large telescopes This overview of stellar research is at a level suitable for research astronomers and graduate students

Radio Stars R. Hjellming, David M. Gibson, 2012-12-06 This book is the proceedings of a workshop on stellar continuum radio astronomy that was held in Boulder Colorado on August 8 10 1984 Although it was originally intended to be a small workshop with participants mainly from North America it evolved to a workshop with 72 participants from twelve countries U S A 52 Canada 3 the Netherlands 3 United Kingdom 3 Australia 2 Ireland 2 Italy 2 France 1 Mexico 1 Switzerland 1 West Germany 1 and U S S R 1 This workshop was sponsored by the Joint Institute of Laboratory Astrophysics JILA and the University of Colorado In order to preserve a workshop atmosphere while still presenting both extensive reviews and contributed papers an experimental format was adopted All contributed papers related to the topics of the day were presented in poster form in the early morning and were accessible all day During each morning or afternoon session review papers were presented followed by a coffee break in the poster area adjacent to the conference room Then the review papers and contributed papers were discussed for roughly one and a half hours The last session was devoted to invited panel papers and discussion of current and future problems in the field of stellar radio astronomy

Cyclical Variability in Stellar Winds Lex Kaper, Alexander W. Fullerton, 2013-06-05 It is well known that stellar winds are variable and the fluctuations are often cyclical in nature This property seems to be shared by the winds of cool and hot stars even though their outflows are driven by fundamentally different physical mechanisms Since very similar models have been proposed to explain the cyclical wind variations observed in a wide variety of stars the time was ripe for astrophysicists from many different sub disciplines to

present the state of the art in a concise form The proceedings will provide a useful up to date overview of the observations interpretation and modelling of the time dependent mass outflows from all sorts of stars

Path of the Sun Violette Malan, 2010-09-07 On their search for two missing Mercenary Brothers Dhulyn Wolfshead and Parno Lionsmane must track a serial killer into the Path of the Sun an ancient labyrinth from which few people return

The Environments of the Sun and the Stars Jean-Pierre Rozelot, Coralie Neiner, 2012-08-17 Based on lectures given at a CNRS summer school in France this book covers many aspects of stellar environments both observational and theoretical and offers a broad overview of the field More specifically Part I of the book focuses on the Sun the properties of the ejected plasma of the solar wind and on space weather The second part deals with tides in planetary systems and in binary stellar systems as well as with interactions in massive binary stars as seen by interferometry Finally the chapters of Part III discuss the environments of young or evolved stars stellar winds agnetic fields and disks With its broad approach the book will provide advanced students as well as researchers with a good overview of the environments of the Sun and the stars

The Symbiotic Phenomenon Joanna Mikolajewska, M. Friedjung, Scott J. Kenyon, Roberto Viotti, 2012-12-06 Symbiotic stars were identified spectroscopically as M giants with a very strong He II 4686 emission line After five decades of study by many astronomers the first international meetings devoted to symbiotics were held at the University of Colorado Boulder and at the Haute Provence Observatory during the Summer of 1981 These conferences emphasized exciting new results obtained by modern satellite EINSTEIN IUE and ground based observatories Although the vast majority of the participants were already fairly sure that symbiotics are almost certainly interacting binary systems and not extremely peculiar single stars it was not clear exactly which types of physical processes were needed to be invoked to explain their observed behaviour Many were even worried that it might not be possible to clearly define a class of symbiotic stars and thus establish a unique model applicable to any system Since the publication of the Haute Provence proceedings our understanding of the physical processes occurring in symbiotic stars and in related objects such as cataclysmic variables and compact planetary nebulae has greatly improved We now speak confidently of a symbiotic phenomenon in which an evolved red giant and a hot companion object usually thought to be an accreting main sequence star or a luminous white dwarf star happily coexist
