Resources for Teaching Elementary School Science National Science Resources Center of the National Academy of Sciences and the Smithsonian Institution, 1996-03-28 What activities might a teacher use to help children explore the life cycle of butterflies? What does a science teacher need to conduct a leaf safari for students? Where can children safely enjoy hands-on experience with life in an estuary? Selecting resources to teach elementary school science can be confusing and difficult, but few decisions have greater impact on the effectiveness of science teaching. Educators will find a wealth of information and expert guidance to meet this need in Resources for Teaching Elementary School Science. A completely revised edition of the best-selling resource guide Science for Children, Resources for Teachers, this new book is an annotated guide to hands-on, inquiry-centered curriculum materials and sources of help in teaching science from kindergarten through sixth grade. Companion volumes for middle and high school are planned. The guide annotates about 350 curriculum packages describing the activities involved and what students learn. Each annotation lists recommended grade levels, accompanying materials and kits, or suggested equipment and ordering information. These 400 entries were reviewed by both educators and scientists to ensure that they are accurate and current and offer students the opportunity to ask questions and find their own answers. Experiment productively. Develop patience, persistence, and confidence in their own ability to solve real problems. The entries in the curriculum section are grouped by scientific area: Life Science, Earth Science, Physical Science, and Multidisciplinary and Applied Science, and by type: core materials, supplementary materials, and science activity books. Additionally, a section of references for teachers provides annotated listings of books about science and teaching, directories and guides to science trade books and magazines that will help teachers enhance their students' science education. Resources for Teaching Elementary School Science also lists by region and state about 600 science centers, museums, and zoos where teachers can take students for interactive science experiences. Annotations highlight almost 300 facilities that make significant efforts to help teachers. Another section describes more than 100 organizations from which teachers can obtain more resources. And a section on publishers and suppliers gives names and addresses of sources for materials. The guide will be invaluable to teachers, principals, administrators, teacher trainers, science curriculum specialists, and advocates of hands-on science teaching, and it will be of interest to parent-teacher organizations and parents.

Astounding Stories of Super-Science, May and June 1930 Various Authors, He smiled his quiet smile and led the way to what had been the billiard room of The Billows but which was the laboratory of The Monstrosity The first thing my eyes fell upon were two gleaming metal objects suspended from chains let into the ceiling Diving suits explained Mercer Rather different from anything you ve ever seen They were different The body was a perfect globe as was the head piece The legs were cylindrical jointed at knee and thigh with huge discs The feet were solid metal curved rocker like on the bottom and at the ends of the arms were three hooked talons the concave sides of two talons facing the concave side of the third The arms were hinged at the elbow just as the legs were hinged but there was a huge ball and socket joint at the shoulder But Mercer I protested No human being could even stand up with that weight of metal on and around him You re mistaken Taylor smiled Mercer That is not solid metal you see And it is an aluminum alloy that is not nearly as heavy as it looks There are two walls slightly over an inch apart braced by innumerable trusses The fabric is nearly as strong as that much solid metal and infinitely lighter They work all right Taylor I know because I ve tried them And this hump on the back I asked walking around the odd dangling figures hanging like bloated metal skeletons from their chains I had thought the bodies were perfect globes I could see now that at the rear there was a humplike excrescence across the shoulders Air explained Mercer There are two

other tanks inside the globular body That shape was adopted by the way because a globe can withstand more pressure than any other shape And we may have to go where pressures are high And so I said we don't do these things and stroll out into the Atlantic looking for the girl and her friends Hardly They're not quite the apparel for so long a stroll You haven't seen all the marvels yet Come along He led the way through the patio beside the pool in which our strange visitor from the depths had lived during her brief stay with us and out into the open again As we neared the sea I became aware for the first time of a faint muffled hammering sound and I glanced at Mercer inquiringly *Astounding Stories Of Super Science August 1930*
