

YOU CAN START OVER AGAIN!

Don't even think about quitting now!

It is easy to replay in your mind how things did not work, how much you lost, what you are going through, how angry you are. There is no amount of conversation or magic that is going to wipe the slate clean. You are wasting valuable time and energy that could be used to regain a new normal and start another version of your life. Even though you are hurt and you may be feeling down – stop kicking yourself! Face what has happened. Make the decision to start over again.

Electrical, Information Engineering and Mechatronics 2011 Shaobo Zhong, Fuzhong Wang, 2012-03-21 As future generation electrical, information engineering, and mechatronics become specialized and fragmented, it is easy to lose sight of the fact that many topics in these areas have common threads, and because of this, advances in one discipline may be transmitted to others. The 2011 International Conference on Electrical Information Engineering and Mechatronics (EIEM 2011) is the first conference that attempts to follow the above idea of hybridization in electrical, information engineering, mechatronics, and applications. This Proceedings of the 2011 International Conference on Electrical Information Engineering and Mechatronics provides a forum for engineers and scientists to address the most innovative research and development, including technical challenges and social, legal, political, and economic issues, and to present and discuss their ideas, results, works in progress, and experience on all aspects of electrical, information engineering, mechatronics, and applications. Engineers and scientists in academia, industry, and government will find insights into the solutions that combine ideas from multiple disciplines in order to achieve something more significant than the sum of the individual parts in all aspects of electrical, information engineering,

mechatronics and applications **Teams for a New Generation** Mark Rose, 2007-10-12 There has been much written about teams with an ongoing debate about the primacy of environment or dynamics as the most important element to effective teams Yet the need for groups to be able to consistently tap into the collective intelligence present in the team is more and more important This requires teams to move beyond cooperation goodwill and consensus and be able to challenge individual and collective assumptions to see new alternatives This book provides a simple but elegant model to understand how teams move past the mediocrity of consensus to innovative thinking that comes with Collective Learning Collective Learning occurs when teams become aware of their assumptions and it challenges them to create a new understanding of what is real and what is important When that happens lasting change can come from within the team There are four distinct abilities that must be present to provide the infrastructure for a group to learn collectively and here is the how to to dramatically increase team effectiveness This book is focused on how a facilitator can help groups and the individuals in those groups slow down the emotional and belief processes in order to create opportunities to choose responses rather than being on automatic pilot The purpose of the facilitator's effort is to move experiential learning beyond the traditional notion of teambuilding Teambuilding has become a catchall phrase for helping a group get more comfortable with one another and develop trust It is our opinion that to unlock the power of these experiential tools facilitators must think about developing two Meta skills Emotional Maturity and Critical Thinking Using experiential learning to develop the attitudes and skills to continually learn provides a real hope for creating fundamental change in the way people and groups interact
