porous ceramics and more      New Jersey Ceramist ,1929      *Brick and Clay Record* ,1913      **Brick** ,1926      **Recent Advances in Porous Ceramics** Uday M. Basheer Al-Naib,2018-09-19 Porous ceramics have recently gained growing importance in industry because of their many applications like filters absorbers dust collectors thermal insulation hot gas collectors dielectric resonators bioreactors bone replacement and automobile engine components Generally porous ceramics have good properties such as mechanical strength abrasion resistance and chemical and thermal stability These porous network ceramic structures also have relatively low density low mass and low thermal conductivity Furthermore permeability is one of the most important properties of porous ceramics for different applications such as membranes because this property directly relates to the pressure drop during filtration Pore size control is one key factor in fabrication of porous ceramics The size of particles and their distribution of the raw materials manufacturing techniques types of binder used distribution of binder and sintering affect the final porosity and pore connectivity are important things that must be considered during the manufacturing of a porous ceramic body Therefore the development of porous ceramic research requires sufficient mechanical and chemical stability as well as permeability This book covers a wide range of topics such as porous ceramic structure and properties preparation simulation and fabrication sintering applications for bioceramics sensors magnetics and energy saving      *Nitride Ceramics* Alexander A. Gromov,Liudmila N. Chukhlomina,2014-10-16 A comprehensive overview of recent developments in the field of non oxide ceramics with special emphasis placed on the combustion synthesis of group I VI nitrides and oxynitrides To ensure the widest possible perspective the authors are experts in academia industry or government research and each chapter discusses different synthetic methods and process parameters as well as important material properties and applications The result is invaluable reading for researchers and practitioners in the industry as well as those looking for an introduction to the field It is equally of great interest to chemists and materials scientists as well as engineers working in the area of inorganic and solid state chemistry structural and functional materials catalysis metallurgy and electrochemistry      Advanced Ceramics Shadia Jamil Ikhmayies,2023-11-10 This book presents the fundamentals of advanced ceramics their stages of development types and classifications advanced processing techniques properties sintering and new forms of applications It highlights specific examples such as alumina zirconia Mg Al spinels silicon carbide silicon nitride ceramic composites and thin films with their specific applications The book reviews progress in perovskite ceramics in which the synthesis processing characterization and advanced applications of perovskite ceramics are all thoroughly discussed In addition developments of perovskite solar cells the main factors affecting their stability current problems development prospects in the research and application of perovskite solar cells are all highlighted This book also includes a review of a particular class of rare earth based mixed metal oxides namely  $\text{Ln}_2\text{B}_2\text{O}_7$  nanostructures B Zr Sn and Ce where advantages and disadvantages of each production technique are addressed along with the properties of as produced nanostructures The solar photocatalytic uses of  $\text{Ln}_2\text{B}_2\text{O}_7$  nanostructures such as

photodegradation of contaminants are also discussed Yttria based transparent ceramics for photonic applications are reviewed along with a discussion of powder synthesis green body preparation sintering and optical properties In addition the fundamentals of electrophoretic deposition of hydroxyapatite incorporated composite coatings on metallic substrates are presented and discussed The different types of ceramics based self healing coatings and their fabrication processes have also been reported and discussed in this book These include titania zirconia titanium alumina and zirconia alumina incorporated with Benzotriazole BTA as an inhibitor Advanced ceramic materials that have been used for the purpose of wastewater treatment including ceramic sorbents resins aerosols and ceramic membranes that have been widely used for wastewater treatment purposes are also discussed in depth Moreover the book presents the preparation of geopolymers by microwave treatments and explains how their properties can be tuned using microwaves Furthermore the future and perspective of these advanced ceramic materials and their modifications to ensure better efficacy toward environmental remediation purposes are highlighted in this book
