The Logical Structure Of Mathematical Physics:

The Logical Structure of Mathematical Physics Joseph D. Sneed, 1971 **The Logical Structure of Mathematical Physics** J.D. Sneed, 2012-12-06 This book is about scientific theories of a particular kind theories of mathematical physics Examples of such theories are classical and relativistic particle mechanics classical electrodynamics classical thermodynamics statistical mechanics hydrodynamics and quantum mechanics Roughly these are theories in which a certain mathematical structure is employed to make statements about some fragment of the world Most of the book is simply an elaboration of this rough characterization of theories of mathematical physics It is argued that each theory of mathematical physics has associated with it a certain characteristic mathematical structure This structure may be used in a variety of ways to make empirical claims about putative applications of the theory Typically though not necessarily the way this structure is used in making such claims requires that certain elements in the structure play essentially different roles Some play a theoretical role others play a non theoretical role For example in classical particle mechanics mass and force play a theoretical role while position plays a non theoretical role Some attention is given to showing how this distinction can be drawn and describing precisely the way in which the theoretical and non theoretical elements function in the claims of the theory An attempt is made to say rather precisely what a theory of mathematical physics is and how you tell one such theory from another what the identity conditions for these theories are *The Logical Structure of Mathematical Physics* Joseph Donald Sneed, 1979 **The logical structure of mathematical physics** Joseph D. Sneed, 1971 **Ideas for a Hermeneutic Phenomenology of the Natural Sciences** Joseph J. Kockelmans, 1993-07-31 I have always had a great interest in the philosophy of science At first this interest led to reflections on the mathematical sciences I later my focus shifted to the natural sciences 2 during the past twenty years or so my interest has also included the behavioral social and historical sciences From the very start my interest was always combined with a concern for the history of the sciences In philosophy of science proper my main interest was not in logical methodological or even epistemological issues although I obviously studied and taught the most important insights proposed in the leading publications in this large field of study My concern has always been predominantly ontological and in that area I have approached the relevant issues from a 4 phenomenological perspective For what follows it is perhaps of some importance to mention here that I came to phenomenology in a rather indirect way through the philosophy of Nicolai Hartmann Yet it was mainly the influence of Herman Van Breda and Alphonse De Waelhens which led me directly to Husserl's phenomenology At first I focused almost exclusively on Husserl's phenomenology Later I moved in the direction of the philosophy of Merleau Ponty and 1 Cf Joseph J Kockelmans *Philosophy of Mathematics in the Middle Ages* in Dutch Langemark Vonksteen 1953 *On the Mode of Being of Mathematical Entities* in Dutch in *Tijdschrift voor Philosophie* 16 1954 pp 289 331 2 Joseph J Kockelmans *On Time and Space* *The Logical Structure of Clinical Medicine* Ulrich Müller-Kolck, 2015-11-17 The practice of medicine basically depends on three general concepts and

individual patient image the individual disease course of this patient and an expectation of the future development of the disease Physicians use heuristics for the cognitive processing of these concepts Basic clinical heuristics are put into three algorithms a history based learning algorithm a diagnostic inferencing algorithm and a prognostic planning algorithm A proto theory of clinical reasoning for practicing physicians is proposed Hans Reichenbach: Logical Empiricist M.H.

Salmon,2012-12-06 Logical empiricism not to be confused with logical positivism see pp 40 44 is a movement which has left an indelible mark on twentieth century philosophy Hans Reichenbach 1891 1953 was one of its found ers and one of its most productive advocates His sudden and untimely death in 1953 halted his work when he was at the height of his intellectual powers nevertheless he bequeathed to us a handsome philosophical inheritance At the present time twenty five years later we can survey our heritage and see to what extent we have been enriched The present collection of essays constitutes an effort to do just that to exhibit the scope and unity of Reichenbach s philosophy and its relevance to current philosophical issues There is no Nobel Prize in philosophy the closest analogue is a volume in The Library of Living Philosophers an honor which like the Nobel Prize cannot be awarded posthumously Among scientific philosophers Rudolf Carnap Albert Einstein Karl Popper and Bertrand Russell have been so honored Had Reichenbach lived longer he would have shared the honor with Carnap for at the time of his death a volume on Logical Empiricism treating the works of Carnap and Reichenbach was in its early stages of preparation In the volume which emerged Carnap wrote In 1953 when Reichenbach s creative activity was suddenly ended by his premature death our movement lost one of its most active leaders **The Logico-Algebraic**

Approach to Quantum Mechanics C.A. Hooker,2012-12-06 The twentieth century has witnessed a striking transformation in the un derstanding of the theories of mathematical physics There has emerged clearly the idea that physical theories are significantly characterized by their abstract mathematical structure This is in opposition to the tradi tional opinion that one should look to the specific applications of a theory in order to understand it One might with reason now espouse the view that to understand the deeper character of a theory one must know its abstract structure and understand the significance of that struc ture while to understand how a theory might be modified in light of its experimental inadequacies one must be intimately acquainted with how it is applied Quantum theory itself has gone through a development this century which illustrates strikingly the shifting perspective From a collection of intuitive physical maneuvers under Bohr through a formative stage in which the mathematical framework was bifurcated between Schr dinger and Heisenberg to an elegant culmination in von Neumann s Hilbert space formulation the elementary theory moved flanked even at the later stage by the ill understood formalisms for the relativistic version and for the field theoretic alternative after that we have a gradual but constant elaboration of all these quantal theories as abstract mathematical struc tures their point of departure being von Neumann s formalism until at the present time theoretical work is heavily preoccupied with the manip ulation of purely abstract structures **Language in Focus: Foundations, Methods and Systems** A. Hillel 1915-1975 was one of the leading intellectuals of Israel and of the world. His work ranged over mathematics, applied logic, communication theory, analytic philosophy, philosophy of science, and linguistics. Creative, patient, attentive, and critical, Bar Hillel was a superb philosopher. In addition, how humane he was may be learned from the memorial tributes to him which initiate this volume. Bar Hillel was born in Vienna and came to Israel then Palestine in 1933. He took his M.A. in 1938 and Ph.D. in 1949 at the Hebrew University of Jerusalem where his subsequent career continued as Research Fellow (1949-53), Senior Lecturer in Philosophy (1953-58), Associate Professor of Philosophy (1958-61), and Professor of Logic and Philosophy of Science (1961-75). He was often abroad as visiting professor: Berkeley (1960-61), Michigan (1965), La Jolla (1966-67), Konstanz (1971), Berlin (1972), or as a research scholar, notably at the MIT Research Laboratory for Electronics during the early 1950s. Bar Hillel was the Secretary and guiding spirit of the Organizing Committee for the 3rd International Congress for Logic, Methodology, and Philosophy of Science held in Jerusalem in 1964. During 1966-68 he was President of the Division of Logic, Methodology, and Philosophy of Science of the International Union of History and Philosophy of Science, and in 1967 President of the International Union. From 1963 he was a Member of the Israel Academy of Sciences and Humanities.

Space, Time and Geometry

Patrick Suppes, 2013-03-09. The articles in this volume have been stimulated in two different ways. More than two years ago the editor of *Synthese*, Jaakko Hintikka, announced a special issue devoted to space and time, and articles were solicited. Part of the reason for that announcement was also the second source of papers. Several years ago I gave a seminar on special relativity at Stanford, and the papers by Domotor Harrison, Hudgin, Latzer, and myself partially arose out of discussion in that seminar. All of the papers except those of Grünbaum, Fine, the second paper of Friedman, and the paper of Adams appeared in a special double issue of *Synthese* 24 (1972) Nos. 1-2. I am pleased to have been able to add the four additional papers mentioned in making the special issue a volume in the *Synthese* Library. Of these four additional articles, only the one by Fine has previously appeared in print. *Synthese* 22 (1971) 448-481; its relevance to the present volume is apparent. In preparing the papers for publication and in carrying out the various editorial chores of such a task, I am very much indebted to Mrs. Lillian O'Toole for her extensive assistance.

INTRODUCTION. The philosophy of space and time has been of permanent importance in philosophy, and most of the major historical figures in philosophy, such as Aristotle, Descartes, and Kant, have had a good deal to say about the nature of space and time.
