## Star Atlas:

**Star Atlas, Containing Maps of All the Stars from 1 to 6.5 Magnitude Between the North Pole and 34° South Declination** Hermann Joseph Klein, 1901      **Star Atlas** Hermann J. Klein, 1888      The Cambridge Star Atlas Wil

Tirion, 2011-01-27 This classic star atlas is ideal for both beginning astronomers and more experienced observers worldwide. The clear full color maps show stars, clusters and galaxies visible with binoculars or a small telescope. The atlas also features constellation boundaries and the Milky Way and lists objects that are interesting to observe. This new edition features a clearer map of the Moon's surface showing craters and features a second Moon map mirror reversed for users of telescopes with star diagonals, enhanced index charts showing the constellations more clearly and a new data table listing stars hosting planetary systems. It is now spiral bound making it ideal for use at the telescope.      **The Star Atlas Companion** Philip M.

Bagnall, 2012-05-19 Conventional star atlases are great for locating constellations and individual stars but The Star Atlas Companion goes one step further and describes the physical properties of more than 1 100 stars. With the aid of scale diagrams the reader can get a real sense of the sizes, shapes, distances and surface features of many of the stars visible to the naked eye in both the Northern and Southern Hemispheres. Information on their rotational velocities and periods is given together with their spectral type and luminosity. Binary and multiple star systems are explained in detail. Special mention is made of Barnard's, Kapteyn's, Kepler's and Van Maanen's Stars and the properties of many open clusters are given. With its emphasis on helping the amateur astronomer gain a better understanding of what they are looking at The Star Atlas

Companion will provide a new dimension to observing the star and is an invaluable supplement to any star atlas.      A Star Atlas and Reference Handbook Arthur Philip Norton, 1927      **Star Atlas** Hermann Joseph Klein, 1893      A Star Atlas and

Reference Handbook (epoch 1920) for Students and Amateurs, Covering the Whole Star Sphere, and Showing Over 7000 Stars, Nebulae, and Clusters Arthur Philip Norton, 1927      **Cambridge Pocket Star Atlas** John Cox, 1996-09-13 This guide

charts the positions of over 1 000 stars and celestial objects arrayed in easy to read maps. It includes a detailed introduction to stargazing with explanations of the celestial sphere, coordinates, time, star names and other basic concepts. The author catalogs a list of eclipses of the sun and moon through the year 2012 and also supplies a complete list of constellation names and symbols. Fourteen color maps show both polar and equatorial projections of the sky. With additional data on the location of variable stars, the brightest stars and clusters, this book is worth taking on your next nighttime sojourn across the sky.
