Starburstagn Connection:

Advanced Lectures On The Starburst-agn Connection Itziar Aretxaga, Daniel Kunth, Raul Mujica, 2001-04-24 A group of leading experts in the field of starbursts and active galactic nuclei have joined hands to produce this review volume which covers the starburst AGN connection and the tests to be carried out with the upcoming new astronomical facilities to ascertain the relevance of both components to the formation and evolution of galaxies The book is addressed to advanced graduate students and researchers in the fields of active galactic nuclei and young galaxies *The Starburst-AGN Connection* Weimin Wang, 2009 Starburst and AGN which are among the most active extragalactic phenomena have been studied independently for many years Recent observations reveal that many galaxies exhibit both AGN and starburst features which naturally invites an investigation of their physical connection Considerable new multi wavelength observations during the last decade together with the results of many theoretical studies are enabling the physics and connectedness of these two phenomena to be understood more deeply These proceedings are of a conference held at Shanghai Normal University on a very pleasant campus southwest of the city More than 120 participants from over 20 different countries were in attendance The goals of the conference were to review past progress present new results plan future work and establish observational and theoretical collaborations We were treated to the first in depth presentation of Spitzer Space Telescope mid IR spectroscopy and imaging photometry as well as new detailed theoretical modeling of the relationship and interaction between starbursts and AGN Also presented were major new studies of the local universe from SDSS and other ground based radio IR optical and space based x ray observatories The importance of the intense starburst and AGN activity in the early universe only 1 billion years after the Big Bang is becoming evident from the very early formation of extremely massive galaxies and black holes The coming together and cross fertilization of these studies at the conference was most productive

Starburst Galaxies: Near and Far L. Tacconi, D. Lutz, 2012-12-06 A major fraction of star formation in the universe occurs in starbursts These regions of particularly rapid star formation are often located towards the centers of host galaxies Studies of this kind of star formation at high redshift have produced astonishing results over recent years that were only possible with the latest generation of large ground based and space telescopes The papers collected in this volume present these results in the context of the much firmer foundation of star formation in the local universe and they emphasize all the important topics from star formation in different environments to the cosmic star formation history *Massive Stars in Starbursts* Claus Leitherer, Space Telescope Science Institute (U.S.), 1991-05-16 This book reviews the importance of massive stars in several areas of astrophysics Massive stars are objects that are 10 100 times the mass of our Sun Above ten solar masses loss through stellar winds begins to have a major impact on the evolution of a star The upper limit of 100 solar masses is derived from observations Significant progress has now been achieved in massive star research New models along with high quality observations have improved our understanding of the formation structure atmosphere and evolution of

these massive objects They are formed in violent bursts of star formation and are probably related to the phenomena observed in active galactic nuclei The workshop at the Space Telescope Science Institute examined the interplay between the astrophysics of massive stars and their location in extragalactic starburst regions There are eighteen chapters by leading researchers Each has been carefully edited to ensure that the book is a comprehensive introduction to the theory and observation of massive stars in starburst regions

QSO Hosts and Their Environments Isabel Márquez,Josefa Masegosa,Ascensión del Olmo,Lucas Lara,Emilio García,Josefina Molina,2012-12-06 Advanced technologies in astronomy at various wavelengths have provided us with high resolution and high quality data on the QSO population This meeting was aimed at understanding the morphology and nature of the host galaxies and environments of QSOs The invited lectures as well as the contributed and poster papers highlighted the main issues of current research the stellar and gaseous content of the underlying galaxy the characterization of the population of companions and the nature of their interaction with the host galaxy the connection between radio loud QSO and radio galaxies and QSOs and ULIRGs the evolution with redshift of both the host galaxy and its environment and the main implications in theories of galaxy formation and evolution This volume provides a valuable overview and timely update of the exciting and rapidly developing field of QSO hosts and their environments essential reading for graduate students and researchers
