publication of Klaus Immelmann's eminent work on finches based on extensive field studies the time has come for a new examination of Australian grassfinches In *Grassfinches in Australia* Joseph Forshaw Mark Shephard and Anthony Pridham have summarised our present knowledge of each species and have given readers a visual appreciation of the birds in their natural habitats and in aviculture The resulting combination of superb artwork and scientifically accurate text ensures that this volume will become the standard reference work on Australian grassfinches In addition to enabling aviculturists to know more about these finches in the wild as a guide to their own husbandry techniques detailed information on current management practices for all species in captivity is provided The book also includes colour plates depicting some of the more common mutations held in Australian and overseas collections

Biodesign in the Age of Artificial Intelligence Claudia Pasquero,Marco Poletto,2023-07-10 Biodesign in the Age of Artificial Intelligence Deep Green investigates the potential of nature based technology for shaping the evolution of contemporary architecture and design It takes on the now pervasive topic of design intelligence extending its definition to encompass both biological and digital realms As in their first title Systemic Architecture Operating Manual for the Self Organizing City the authors engage the topic through the specific lens of their innovative design practice ecoLogicStudio and their research at the University of Innsbruck and at the Bartlett UCL Part One of the book entitled PhotoSynthetica™ illustrates design solutions that engage the urban microbiome and seek to achieve an immediate impact while Part Two entitled Deep Green includes synthetic landscapes and operates within a much larger spatio temporal frame going beyond human perception and life span to envision design as a geographical and geological force In the age of catastrophic climate change such perceptual expansion helps to clarify that change cannot simply be stopped or rolled back We must instead establish more positive dynamics of change within the living world To this end this book proposes to engage with design and architecture as an extended cognitive interface a sentient being that is co evolutionary and symbiotic with the living planet contributing to its beauty and to our continued enjoyment of it

Tourism, Heritage and Commodification of Non-human Animals: A Posthumanist Reflection Álvaro López López,Gino Jafet Quintero Venegas,Carol Kline,2023-12-19 Heritage is a social construction rooted in modern and contemporary societies It is commonly a positive assessment of many elements of the physical and human environment e g ecosystems and landscapes monuments customs gender norms religious practices gastronomy and livelihoods Heritage and tourism are strongly related to each other in that heritage gives rise to tourist attractions and activities and tourism enhances the designation of heritage sites A post humanist perspective the moral valuation of equality between humans and other animals demands that both are sentient beings and self aware of their pain and pleasure Thus the involvement of animals as heritage elements by themselves or as an element of tourist consumption in heritage sites implies their commodification and lack of agency As such these practices are usually unethical since they threaten the animals primary interests not to suffer not to feel pain and to be able to live their freedom This book contains chapters that reveal both the unethical interactions between humans and animals within heritage tourism and those that show experiences in which efforts

are made to minimize damage within the commercialization of animals involved as heritage themselves
