The Localnet Phenomenon

Edward S. Sarachik, Mark A. Cane

The Localnet Phenomenon:

The El Niño-Southern Oscillation Phenomenon Edward S. Sarachik, Mark A. Cane, 2010-02-18 Many climatic extremes around the globe such as severe droughts and floods can be attributed to the periodic warming of the equatorial Pacific sea surface termed the El Niño or Southern Oscillation ENSO Advances in our understanding of ENSO in which Edward S Sarachik and Mark A Cane have been key participants have led to marked improvements in our ability to predict its development months or seasons allowing adaptation to global impacts This book introduces basic concepts and builds to more detailed theoretical treatments Chapters on the structure and dynamics of the tropical ocean and atmosphere place ENSO in a broader observational and theoretical context Chapters on ENSO prediction past and future and impacts introduce broader implications of the phenomenon This book provides an introduction to all aspects of this most important mode of global climate variability for research workers and students of all levels in climate science oceanography and related fields

Electrokinetic and Colloid Transport Phenomena Jacob H. Masliyah, Subir Bhattacharjee, 2006-07-14 A new definitive perspective of electrokinetic and colloid transport processes Responding to renewed interest in the subject of electrokinetics *Electrokinetic and Colloid Transport Phenomena* is a timely overview of the latest research and applications in this field for both the beginner and the professional An outgrowth of an earlier text by coauthor Jacob Masliyah this self contained reference provides an up to date summary of the literature on electrokinetic and colloid transport phenomena as well as direct pedagogical insight into the development of the subject over the past several decades A distinct departure from standard colloid science monographs *Electrokinetic and Colloid Transport Phenomena* presents the most salient features of the theory in a simple and direct manner allowing the book to serve as a stepping stone for further learning and study In addition the book uniquely discusses numerical simulation of electrokinetic problems and demonstrates the use of commercial finite element software for solving these multiphysics problems Among the topics covered are Mathematical preliminaries Colloidal systems Electrostatics and application of electrostatics Electric double layer Electroosmosis and streaming potential Electrophoresis and sedimentation potential London Van der Waals forces and the DLVO theory Coagulation and colloid deposition Numerical simulation of electrokinetic phenomena Applications of electrokinetic phenomena Because this thorough reference does not require advanced mathematical knowledge it enables a graduate or a senior undergraduate student approaching the subject for the first time to easily interpret the theories On the other hand the application of relevant mathematical principles and the worked examples are extremely useful to established researchers and professionals involved in a wide range of areas including electroosmosis streaming potential electrophoretic separations industrial practices involving colloids and complex fluids environmental remediation suspensions and microfluidic systems

Interfaces, Phenomena, and Nanostructures in Lithium Batteries Albert R. Landgrebe, Robert J. Klingler, 2001

Advanced Transport Phenomena L. Gary Leal, 2007-06-18 *Advanced Transport Phenomena* is ideal as a graduate textbook

It contains a detailed discussion of modern analytic methods for the solution of fluid mechanics and heat and mass transfer problems focusing on approximations based on scaling and asymptotic methods beginning with the derivation of basic equations and boundary conditions and concluding with linear stability theory Also covered are unidirectional flows lubrication and thin film theory creeping flows boundary layer theory and convective heat and mass transport at high and low Reynolds numbers The emphasis is on basic physics scaling and nondimensionalization and approximations that can be used to obtain solutions that are due either to geometric simplifications or large or small values of dimensionless parameters The author emphasizes setting up problems and extracting as much information as possible short of obtaining detailed solutions of differential equations The book also focuses on the solutions of representative problems This reflects the book's goal of teaching readers to think about the solution of transport problems

Mass, Momentum and Energy Transport Phenomena Harry Van den Akker, Robert F. Mudde, 2023-09-18 A treatment of the transport and transfer processes of heat mass and momentum in terms of their analogy The processes are described with the help of macro and micro balances which in many cases lead to differential equations This way the textbook also prepares for Computational Fluid Dynamics techniques The topics of the five chapters of the textbook are Balances shape and recipe mass balance residence time distribution energy and heat balances Bernoulli equation momentum balances Molecular transport dimensional analysis forces on immersed objects Heat transport steady state and unsteady conduction the general heat transport equation forced and free convective heat transport radiant heat transport Mass transport steady state and unsteady diffusion the general mass transport equation mass transfer across a phase interface convective mass transport wet bulb temperature Fluid mechanics flow meters pressure drop packed beds laminar flow of Newtonian and non Newtonian fluids Navier Stokes equations The leading idea behind this textbook is to train students in solving problems where transport phenomena are key To this end the textbook comprises almost 80 problems with solutions

Aeroelastic Phenomena and Pedestrian-structure Dynamic Interaction on Non-conventional Bridges and Footbridges Claudio Borri, Claudio Mannini, 2010 Fluid structure and pedestrian structure interaction phenomena are extremely important for non conventional bridges The results presented in this volume concern simplified formulas for flutter assessment innovative structural solutions to increase the aeroelastic stability of long span bridges numerical simulations of the flow around a benchmark rectangular cylinder examples of designs of large structures assisted by wind tunnel tests analytical computational and experimental investigation of the synchronisation mechanisms between pedestrians and footbridge structures The present book is addressed to a wide audience including professionals doctoral students and researchers aiming to increase their know how in the field of wind engineering bluff body aerodynamics and bridge dynamics

Chronic Traumatic Osteomyelitis James Renfrew White, 1919 *International Conference on Phenomena in Ionized Gases*, 2001 **Global Climate Feedbacks** Bernard Manowitz, 1990 **Traditional Media and the Internet** Sylvia M.
