Space Frontier:

Space Frontier Wernher Von Braun, 1971 SPACE FRONTIER. WERNHER DR. VON BRAUN, 1963 *Reopening the Space Frontier* John Hickman, 2010 Reopening the Space Frontier escapes the usual arc of space policy analysis focused on technological choice and instead explains the international legal and political economic barriers to the renewed exploration development and settlement of celestial bodies like the Moon and Mars The science and engineering of the mid twentieth century were sufficient for human landings on the Moon Yet today the human adventure in space is limited to visits by small numbers of astronauts to a single space station in Earth orbit As the author explains using the institutions that opened terrestrial geographic frontiers in the past provides the effective means for reopening the space frontier Along the way he demolishes the wishful thinking that has shackled popular thinking about space policy International competition rather than international cooperation motivated states to open terrestrial frontiers for centuries and that motivation will have to be harnessed again for our species to permanently occupy other worlds of the solar system **Dark Star** Matthew H. Hersch, 2023-12-26 A captivating history of NASA's Space Transportation System the space shuttle chronicling the inevitable failures of a doomed design In Dark Star Matthew Hersch challenges the existing narrative of the most significant human space program of the last 50 years NASA's space shuttle He begins with the origins of the space shuttle a century long effort to develop a low cost reusable rocket powered airplane to militarize and commercialize space travel which Hersch explains was built the wrong way at the wrong time and for all the wrong reasons Describing the unique circumstances that led to the space shuttle's creation by President Richard Nixon's administration in 1972 and its subsequent flights from 1981 through 2011 Hersch illustrates how the space shuttle was doomed from the start While most historians have accepted the view that the space shuttle's fatal accidents including the 1986 Challenger explosion resulted from deficiencies in NASA's management culture that lulled engineers into a false confidence in the craft Dark Star reveals the widespread understanding that the shuttle was predestined for failure as a technology demonstrator The vehicle was intended only to give the United States the appearance of a viable human spaceflight program until funds became available to eliminate its obvious flaws Hersch's work seeks to answer the perilous questions of technological choice that confront every generation and it is a critical read for anyone interested in how we can create a better world through the things we build Space and Astronomy Kyle Kirkland, 2010 Frontiers of Science is an eight volume set that explores notable issues at the forefront of scientific research and inquiry The interdisciplinary set focuses on the methods and imagination of people who push the boundaries of science by investigating subjects not readily observable or shrouded in obscurity Understanding the science behind scientific advances is critical because new knowledge and theories sometimes seem unbelievable until the underlying methods leading to their discovery become clear Designed to complement science curricula the set covers a broad range of complex relevant topics that will extend the limits of knowledge and satisfy the curiosity of readers Space and Astronomy investigates the

research and discoveries of scientists who explored the frontiers of space and astronomy and found significant objects and environments that no one had ever seen before from Earth The book presents not only basic concepts relating to space and astronomy but also the impact that the field has on the future of technology research and exploration Each chapter traces the evolution of a prominent topic concerning space and astronomy and offers an introduction a conclusion a chronology and a list of resources that allow the reader to focus on the subject being considered The volume includes information on dark matter and dark energy extrasolar planets galaxy formation and evolution gravitational waves interstellar travel space colonization The book contains more than 40 color photographs and line illustrations sidebars a glossary a detailed list of additional print and Internet resources and an index *Frontiers of Science* is essential for high school students teachers and general readers who wish to understand the newest areas of scientific research from groundbreaking issues that are making headlines to ones that are not as well known Book jacket

The Politics of Space Eligar Sadeh, 2010-11 This title provides a concise guide to the way in which politics and space exploration interact

Spacefarers Michael J. Neufeld, 2013-11-06 The recent 50th anniversaries of the first human spaceflights by the Soviet Union and the United States and the 30th anniversary of the launching of the first U S Space Shuttle mission have again brought to mind the pioneering accomplishments of the first quarter century of humans in space Historians political scientists and others have extensively examined the technical programmatic and political history of human spaceflight from the 1960s to the 1980s but work is only beginning on the social and cultural history of the pioneering era One rapidly developing area of recent scholarship is the examination of the images of spacefarers in the media government propaganda and popular culture How was space travel imagined in the visual media on the cusp of human spaceflights How were astronauts and cosmonauts represented in official and quasi official media portraits And how were those images reproduced and transformed by in the imagination of film makers movie producers popular writers and novelists *Spacefarers* addresses these questions with nine contributions from scholars in the field of aerospace history Russian and American history and English literature These essays are preceded by an introduction by the editor who discusses their place in the historiography of spaceflight and social and cultural history The book will have potential appeal to a wide variety of scholars in history literature and the social sciences and will include a number of striking visual images

Vision 2001 United States. Congress. House. Committee on Science. Subcommittee on Space and Aeronautics, 2001

Space Enterprise Phillip Harris, 2009-12-29 In *Space Enterprise Living and Working Offworld* Dr Philip Harris provides the vision and rationale as to why humanity is leaving its cradle Earth to use space resources as well as pursuing lunar industrialization and establishing offworld settlements As a management space psychologist Dr Harris presents a behavioral science perspective on space exploration and enterprise In this his 45th book Phil has completely revised and updated the two previous editions of this classic placing new emphasis on the need for more synergy and participation by the private sector He not only provides a critical review of what is happening in the global space

community but offers specific strategies for lunar economic development The author analyzes the human factors in contemporary and future space developments especially relative to the deployment of people aloft This user friendly volume offers numerous photographs diagrams exhibits and case studies **Scramble for the Skies** Namrata Goswami, Peter A. Garretson, 2020-10-06 With a focus on China the United States and India this book examines the economic ambitions of the second space race The authors argue that space ambitions are informed by a combination of factors including available resources capability elite preferences and talent pool The authors demonstrate how these influences affect the development of national space programs as well as policy and law
