Stamping the Earth from Space Renato Dicati, 2017-01-10 This unique book presents a historical and philatelic survey of Earth exploration from space. It covers all areas of research in which artificial satellites have contributed in designing a new image of our planet and its environment: the atmosphere and ionosphere, the magnetic field, radiation belts, and the magnetosphere; weather, remote sensing, mapping of the surface, observation of the oceans and marine environments, geodesy, and the study of life and ecological systems. *Stamping the Earth from Space* presents the results obtained with the thousands of satellites launched by the two former superpowers, the Soviet Union and the United States, and also those of the many missions carried out by the ESA, individual European countries, Japan, China, India, and the many emerging space nations. Beautifully illustrated, it contains almost 1100 color reproductions of philatelic items. In addition to topical stamps and thematic postal documents, the book provides an extensive review of astrophilatelic items. The most important space missions are documented through event covers and cards canceled at launch sites, tracking stations, research laboratories, and mission control facilities. *Space Science and Astronomy Theatre* Margaret Boone Rappaport, Christopher J. Corbally, 2017-08-09

If you're a teacher or parent struggling to get youngsters or young adults interested in space science and astronomy, or an inquisitive student, then you'll love this fun-filled book of theatrical scenes. In addition to astronomers and astronauts, the scenes also feature engineers, accountants, graphic artists, public relations practitioners, biologists, meteorologists, and others who play a critical role in space adventures. Scenarios will take you into the past and into the future and include: A cosmologist and a computer graphics artist are preparing a presentation for public television on theories about the distribution of galaxies in the universe and the placement of voids where no galaxies are found. An astrobiologist and an engineer discover the first positive biosignature data from an exoplanet near Earth. The findings provide a big surprise. Two recent high school graduates explore a star factory nebula in the constellation Orion, and using a video arcade game, they make speculations about the future. While the props and costumes needed for scripts are minimal, the scenes promote deep learning. Get ready to be entertained and informed with *Space Science and Astronomy Theatre*. **From the Laboratory to the Moon** David H. Devorkin, 2025-05-20 The reserved genius and celebrated Black scientist who built the first astronomical observatory on the moon and worked to inspire underserved students to pursue science and engineering. In April 1972, as George Carruthers closely monitored the operation from the Manned Spacecraft Center in Houston, astronauts conducting the Apollo 16 mission positioned a gold-plated far-ultraviolet electrographic camera on the moon. The camera Carruthers

invention was the first astronomical observatory on the lunar surface where it stands to this day While Carruthers s achievements earned many accolades including the President s Medal for Technology and Invention surprisingly little is known about this remarkable man In *From the Laboratory to the Moon* David DeVorkin explores Carruthers s life and work for the first time telling the full story of how a deeply reserved African American farm boy rose to become one of our most celebrated aerospace scientists DeVorkin follows Carruthers from his childhood in Ohio and then Chicago to his career at the US Naval Research Laboratory in Washington DC In the highly competitive world of space science in the 1960s and 1970s Carruthers s genius for experimentation and exploration transcended the racial stereotyping and discrimination of his day and he achieved world class recognition for his studies of the Earth and deep space A leading expert in the history of astronomy and space science DeVorkin gives a deft account of these achievements and of how Carruthers used the fame they brought him along with his notoriety as a Black man in science to become a tireless advocate for underserved young people in science and engineering *Space Science* United States.
