Shayler, Michael D. Shayler, 2013-04-05 Manned Spaceflight Log discusses over 40 recent spaceflights from September 2006 through September 2012 a time of great change in human spaceflight history Following on from Praxis Manned Spaceflight Log 1961 2006 the authors continue the story until the end of September 2012 with new chapters detailing the development and accomplishments of human spaceflight expanded tables and additional photographs many in color throughout The book opens with a new foreword by Colonel Alfred M Worden USAF Retired NASA Astronaut and CMP of Apollo 15 which reflects on the changing history of human spaceflight and the prospects for future operations

The first chapter explains how human spaceflight has approached the different challenges of exploring space and provided the hardware to meet those challenges This chapter also describes the various attempts to reach orbital flight and the often confusing distinction between ballistic sub orbital and so called astro flights of the X 15 rocket research aircraft program Chapter 2 recalls key historic moments and missions across five decades of human spaceflight Each decade has provided useful lessons for the next and a foundation for future achievement The new mission entries are collected in the third section in chronological order A review of the next steps in human spaceflight including plans to occupy the International Space Station well into the 2020s and the growth of the Chinese manned space program including a large space station and planned base on the Moon is discussed in Chapter 4 The tables provide a complete up to date overview of human spaceflight operations and experience from April 1961 to September 2012 and a selected chronology of important milestones from those years Completing the book is a comprehensive bibliography that lists all the major Springer Praxis human spaceflight titles and other important works that provide the reader with a resource to continue further research

Data Catalog Series for Space Science and Applications Flight Missions ,1982 **European-Russian Space Cooperation** Brian

Harvey,2021-04-10 The story of European Russian collaboration in space is little known and its importance all too often understated Because France was the principal interlocutor between these nations such cooperation did not receive the attention it deserved in English language literature This book rectifies that history showing how Russia and Europe forged a successful partnership that has continued to the present day Space writer Brian Harvey provides an in depth picture of how this European Russian relationship evolved and what factors scientific political and industrial propelled it over the decades The history begins in the cold war period with the first collaborative ventures between the Soviet Union and European countries primarily France followed later by Germany and other European countries Next the chapters turn to the missions when European astronauts flew to Russian space stations the Soyuz rocket made a new home in European territory in the South American jungle and science missions were flown to study deep space Their climax is the joint mission to explore Mars called ExoMars which has already sent a mission to Mars Through this close examination of these European Russian efforts readers will appreciate an altogether new perspective on the history of space exploration no longer defined by competition but rather by collaboration and cooperation
