

PURPOSE:

Learn about the planets, their names and the distance they find from the sun.

Also what are the components that form, colors, temperature and shape. Will there be life on any planet other than the earth? let's investigate!

HYPOTHESIS:

The planets rotate around the sun, some are closer to the sun than others. The closer they are to the sun they are hotter. All have different colors, textures and sizes. After researching a bit on the internet we find the following information about each of the planets.

MATERIALS:

Aluminum	Plasticine
Scissors	Glue
Paint	Acrylic paint
Markers	Glitter
Sticks	Glue
Markers	Glue

SOLAR SYSTEM

DATA:

PROCEDURE:

Using a cardboard we paste half of a foam ball previously painted according to the color of each planet.

We decorate the project with pieces of aluminum foil and glitter to simulate storms and stars that are in the sky.

Then we proceeded to search the internet for all the information on each planet, and finally proceeded to print all the information.

CONCLUSION:

The solar system is a collection of celestial bodies, including the Sun, planets, moons, asteroids, and comets, all bound together by gravity. The Sun is the central body, and the planets orbit around it. The planets are of different sizes, colors, and compositions. Some have atmospheres, and some have moons. The solar system is a complex and fascinating system that has been studied for centuries.
