Larsen, 2016-04-01 The opening of space to exploration and use has had profound effects on society Remote sensing by satellite has improved meteorology land use and the monitoring of the environment Satellite television immediately informs us visually of events in formerly remote locations as well as providing many entertainment channels World telecommunication facilities have been revolutionised Global positioning has improved transport This book examines the varied elements of public law that lie behind and regulate the use of space It also makes suggestions for the development and improvement of the law particularly as private enterprise plays an increasing role in space

Space Law Em Prof Francis Lyall, Mr Paul B Larsen, 2013-02-28 Space law is an area of International Law that has developed massively in the last fifty years Francis Lyall Emeritus Professor of Public Law at the University of Aberdeen Scotland and Paul B Larsen Adjunct Professor at Georgetown Law Centre Washington DC and formerly lawyer for the Office of the US Secretary of Transportation have been involved with it since their days at the Institute of Air and Space Law McGill University Montreal in 1963 4 and both teach Space Law at their respective Universities This book gathers together their experience in readable form and with an extensive citation of the literature of space law its discussion provides an excellent source for both student and practitioners

Pioneers of Space Law Stephan Hobe, 2013-12-09 International space law is less than 50 years old Although the work on the codification of space law started in the late 1950s the Outer Space Treaty was only adopted in January 1967 However much earlier than that even as early as 1932 the first ideas about legal rules for human activities in outer space were being considered Very little is known about these early drafts and proposals and the pioneering work of early scholars in the field remains relatively unknown This volume seeks to redress this by analysing the biographies and contributions to international space law of eleven such early pioneers whose ground breaking and original work helped to develop the field in important ways The collection starts in the 1930 s with the Czech author Vladimir Mandl and dwells at length on the 1950 s the early time of space flight The section on each pioneer is written by different members of the International Institute of Space Law making this a lively fascinating and unique collection of essays of interest to the whole

community of space lawyers Space Law Marietta Benkő, Kai-Uwe Schrogl, Denise Digrell, Esther Jolley, 2005 The contributions in this book reflect on the growing diversification of space law and is divided in two parts The first part provides a look at the current developments in international space law and regulation and the second part investigates future perspectives of this process It is only recently that international space law entered its third phase of development While the first phase between the 1960s and 1970s was characterized by the elaboration of international conventions in the framework of the United Nations the second phase saw the adoption of special legal regimes in the form of UN General Assembly Resolutions which were dealing with issues like direct broadcasting by satellites DBS remote sensing RS and the use of nuclear power sources NPS in outer space The third and current phase received its impetus from the growing commercialization of space activities and their emerging privatization Therefore the main characteristics of this period relate to the efforts of adapting international space law to these recent changes and of finding ways and means to reconcile State interests with commercial perspectives This book forms a welcome addition to any collection in the field of space law and is a refreshing contribution to the discussion in the field **The Environmental Element in Space Law**, 2008 While decades of space ventures have led to significant technological advances space activities have also brought increasing environmental problems This book examines the current international legal regimes in space law and environmental law in order to ascertain their applicability and efficacy in addressing environmental threats in the space sector The research suggests mechanisms which could improve environmental protection in the sector and strengthen the environmental element in space law These mechanisms include a variety of norm setting strategies used in international environmental management Special attention is drawn to the potential of environmental impact assessment in the space sector and to dispute resolution procedures Like other areas of human activities the space sector should accommodate both economic interests and environmental protection in line with the principle of sustainable development **Fundamentals of Space Law and Policy** Fabio Tronchetti, 2013-06-29 Presents and addresses key space law and policy issues for the benefit of wider informed audiences that wish to acquaint themselves with the fundamentals of the space law field This brief analyzes in a concise manner the combined influence of space law and policy on international space activities Read in conjunction with the other books in the Springer Space Development series it supports a broader understanding of the business economics engineering legal and procedural aspects of space activities This book will also give the casual reader as well as experts in the field insight on present and future space law and policy trends challenges and opportunities **Handbook of Space Law** Frans von der Dunk, 2015-02-27 The Handbook of Space Law addresses the legal and regulatory aspects of activities in outer space and major space applications from a comprehensive and structured perspective It fundamentally addresses the dichotomy between the state oriented character *Global Space Governance: An International Study* Ram S. Jakhu, Joseph N. Pelton, 2017-09-12 This book is based on the findings conclusions and recommendations of the Global Space Governance

study commissioned by the 2014 Montreal Declaration that called upon civil society academics governments the private sector and other stakeholders to undertake an international interdisciplinary study The study took three years to complete It examines the drivers of space regulations and standards key regulatory problems and especially addresses possible improvements in global space governance The world's leading experts led the drafting of chapters with input from academics and knowledgeable professionals in the public and private sectors intergovernmental organizations and nongovernmental organizations from all the regions of the world with over 80 total participants This book and areas identified for priority action are to be presented to the UN Committee on the Peaceful Uses of Outer Space and it is hoped will be considered directly or indirectly at the UNISPACE 50 event in Vienna Austria in 2018 The report a collective work of all the contributors includes objective analysis and frank statements expressed without pressure of political national and occupational concerns or interest It is peer reviewed and carefully edited to ensure its accuracy preciseness and readability It is expected that the study and derivative recommendations will form the basis for deliberations and decisions at international conferences and meetings around the world on the theme of global space governance This will hopefully include future discussion at the UN Committee on the Peaceful Uses of Outer Space

Launching Space Objects: Issues of Liability and Future Prospects V. Kayser, 2006-04-11 Launch activities performed by private entities deal with a complex legal environment The Space Treaties provide a general liability framework Launch participants are subject to regulatory or institutional control and to domestic liability laws Specific contractual practice has developed due to insurance limitations the inter participants waivers of liability and claims This book synthesizes information on the norms of play to allow the grasp of their relative weight and interactions in the assessment of liability risk for launch activities It reveals a legal framework presently lacking sufficient predictability for an efficient liability risk management the waivers of liability suffer weaknesses as do all such clauses and lack uniformity and reliability and the Space Treaties contain ambiguous terms preventing predictable determination of the States responsible for authorizing and supervising launch activities and for damage compensation and do not reflect the liability of launch operators This book offers suggestions of new approaches for harmonizing waivers of liability to improve their consistency validity and flow down and improving the Space Treaties for their implementation to non governmental launch activities In the launch community the need for lawmaking is less compelling than in fields such as aviation Nevertheless adjustments to the present framework are proposed through model clauses and an international instrument for further thinking and contribution by those sharing the opinion that creative lawmaking is needed now to prepare for tomorrow's endeavors
