Example: physical exam, vital signs, signs & symptoms, labs, etc

Subjective Data → what the client says (reports)

Example: stomach ache, chest pain, headache, nausea, etc

→ Identify problems

Using the assessment data collected, the goal is to address both actual or potential health problems for the client.

It is mainly used to help shape clinical judgment about a client's physical & psychological status, but may also include the client's social factors, family, or community experiences.

Physical needs always come before psychological needs, as outlined by the Maslow's hierarchy of needs.

For example: We are always going to prioritize an airway issue before we treat an emotional one. Just think what is going to kill your client the fastest & that should help guide which nursing diagnosis to place first on your care plans.
