**Subject arguments and predicate nominals** Els Verheugd-Daatzelaar, 2025-01-27 *The Human Relationship to Nature* Matthew R. Foster, 2016-11-02 Growing alarm over the harm done by humans to the natural world and even to the viability of our own industrial civilization compels us to ask the deeper moral question What should be the human relationship to nature Matthew R Foster starts by assessing three contrasting patterns of moral reasoning the Progress Ethic that created the world we live in the biblically inspired Stewardship Ethic and the Connection Ethic based on scientific understanding of the interdependence of all natural entities Critical analysis reveals that none of these ethics is able to sustain the values it advocates due to two unsupportable presumptions that the norms of human morality are commensurate with the natural world and that the value of an entity is an intrinsic property Foster argues that in order for a future environmental ethic to be both logically coherent and environmentally constructive it must start from unconventional notions First because nature will never be commensurate with human moral reasoning non rational resources must be employed despite the risks involved Second value resides in the relationship of one entity to another and does not belong intrinsically to either in short value is foremost a verb rather than a noun Foster proposes a new paradigm attentive to the realm of value relations among all natural entities one which offers mediating opportunities between nature and morality In this new ethic there are no shoulds Rather moral responsibilities to the natural entities around us are elective placing us in an unfamiliar yet potentially liberating network of relationships This book will be of interest to scholars both instructors and students of environmental ethics philosophy religion and intellectual history and all who are concerned about the environmental challenges of our time

**Endurance and War** Jasen J. Castillo, 2014-04-09 Scholars and military practitioners alike have long sought to understand why some country's militaries fight hard when facing defeat while others collapse In Endurance and War Jasen Castillo presents a new unifying theory cohesion theory to explain why national militaries differ in their staying power His argument builds on insights from the literatures on group solidarity in general and military effectiveness in particular which argue that the stronger the ties binding together individuals in a group of any kind the higher the degree of cohesion that a group will exhibit when taking collective action including fighting in war Specifically he argues that two types of ties determine the cohesion and therefore the resilience of a nation's armed forces during war the degree of control a regime holds over its citizens and the amount of autonomy the armed forces possess to focus on training for warfighting Understanding why armed forces differ in their cohesion should help U S military planners better assess the military capabilities of potential adversaries like Iran and North Korea For scholars of international politics cohesion theory can help provide insights into how countries create military power and how they win wars

**The Syntax of Nonsententials** Ljiljana Progovac, 2006-01-01 This volume brings the data that many in formal linguistics have dismissed as peripheral straight into the core of syntactic theory By bringing together experts from syntax semantics pragmatics philosophy of language language acquisition aphasia and pidgin and creole studies the volume makes a multidisciplinary case for the existence of nonsententials which are analyzed in various chapters as root phrases and small clauses Me Me First Him worry Class in session and whose distinguishing property is the absence of Tense and with it any syntactic phenomena that rely on Tense including structural Nominative Case Arguably the lack of Tense specification is also responsible for the dearth of indicative interpretations among nonsententials as well as for their heavy reliance on pragmatic context So pervasive is nonsentential speech across all groups including normal adult speech that a case can be made that continuity of grammar lies in nonsentential rather than sentential speech

**History of Mathematics** Craig Smorynski, 2007-12-03 1 An Initial Assignment I haven't taught the history of mathematics that often but

I do rather like the course The chief drawbacks to teaching it are that i it is a lot more work than teaching a regular mathematics course and ii in American colleges at least the students taking the course are not mathematics majors but education majors and and in the past I had found education majors to be somewhat weak and unmotivated The last time I taught the course however the majority of the students were graduate education students working toward their master's degrees I decided to challenge them right from the start 1 Assignment In An Outline of Set Theory James Henle wrote about mathematics Every now and then it must pause to organize and reflect on what it is and where it comes from This happened in the sixth century B C when Euclid thought he had derived most of the mathematical results known at the time from five postulates Do a little research to find as many errors as possible in the second sentence and write a short essay on them

The responses far exceeded my expectations To be sure some of the undergraduates found the assignment unclear I did not say how many errors they were supposed to find But many of the students put their hearts and souls 1 My apologists to Prof Henle at whose expense I previously had a little fun on this matter I used it again not because of any animosity I hold for him but because I was familiar with it and dealing with Euclid it seemed appropriate for the start of my course

### **Particle Accelerator**

**Physics II** H. Wiedemann, 2012-12-06 Particle Accelerator Physics II continues the discussion of particle accelerator physics beyond the introductory Particle Accelerator Physics I Aimed at students and scientists who plan to work or are working in the field of accelerator physics Basic principles of beam dynamics already discussed in Vol I are expanded into the nonlinear regime in order to tackle fundamental problems encountered in present day accelerator design and development Nonlinear dynamics is discussed both for the transverse phase space to determine chromatic and geometric aberrations which limit the dynamic aperture as well as for the longitudinal phase space in connection with phase focusing at very small values of the momentum compaction Effects derived theoretically are compared with observations made at existing accelerators

*Particle Accelerator Physics* Helmut Wiedemann, 2013-11-27 This two volume book serves as a thorough introduction to the field of high energy particle accelerator physics and beam dynamics Volume 1 provides a general understanding of the field and a firm basis for the study of the more elaborate topic mainly nonlinear and higher order beam dynamics which is the subject of Volume 2

**Antiplane Motions Of Piezoceramics And Acoustic Wave Devices** Jiashi Yang, 2010-03-29 This book focuses on dynamic antiplane problems of piezoelectric ceramics. It presents relatively simple theoretical solutions to many such problems and attempts to use these solutions to demonstrate the operation and design of several acoustic wave devices. Some of the solutions are able to show the underlying physics clearly without the need for numerical computation. The problems treated include the propagation of plate waves, surface waves, interface waves, Love waves, gap waves, and vibrations of finite bodies of various shapes with applications in resonators, mass sensors, fluid sensors, interface sensors, phononic crystals, piezoelectric generators or power harvesters, piezoelectric transformers, power or signal transmission through an elastic wall, and acoustic wave excitation and detection for nondestructive evaluation.
