Logsdon, 2018-11-26 When Ronald Reagan was elected in 1980 limits on NASA funding and the lack of direction under the Nixon and Carter administrations had left the U S space program at a crossroads In contrast to his predecessors Reagan saw outer space as humanity's final frontier and as an opportunity for global leadership His optimism and belief in American exceptionalism guided a decade of U S activities in space including bringing the space shuttle into operation dealing with the 1986 Challenger accident and its aftermath committing to a permanently crewed space station encouraging private sector space efforts and fostering international space partnerships with both U S allies and with the Soviet Union Drawing from a trove of declassified primary source materials and oral history interviews John M Logsdon provides the first comprehensive account of Reagan's civilian and commercial space policies during his eight years in the White House Even as a fiscal conservative who was hesitant to increase NASA's budget Reagan's enthusiasm for the space program made him perhaps the most pro space president in American history *Frontiers Past and Future* Carl Abbott, 2006 Abbott offers a fruitful new
