Introduction to Machine Learning with Applications in Information Security Mark Stamp, 2017-09-22

Introduction to Machine Learning with Applications in Information Security provides a class tested introduction to a wide variety of machine learning algorithms reinforced through realistic applications. The book is accessible and doesn't prove theorems or otherwise dwell on mathematical theory. The goal is to present topics at an intuitive level with just enough detail to clarify the underlying concepts. The book covers core machine learning topics in depth including Hidden Markov Models, Principal Component Analysis, Support Vector Machines, and Clustering. It also includes coverage of Nearest Neighbors, Neural Networks, Boosting, and AdaBoost, Random Forests, Linear Discriminant Analysis, Vector Quantization, Naive Bayes, Regression Analysis, Conditional Random Fields, and Data Analysis. Most of the examples in the book are drawn from the field of information security with many of the machine learning applications specifically focused on malware. The applications presented are designed to demystify machine learning techniques by providing straightforward scenarios. Many of the exercises in this book require some programming and basic computing concepts are assumed. In a few of the application sections, however, anyone with a modest amount of programming experience should have no trouble. This aspect of the book. Instructor resources including PowerPoint slides, lecture videos, and other relevant material are provided on an accompanying website: <http://www.cs.sjsu.edu/stamp/ML/>. For the reader's benefit, the figures in the book are also available in electronic form and in color. About the Author: Mark Stamp has been a Professor of Computer Science at San Jose State University since 2002. Prior to that, he worked at the National Security Agency (NSA) for seven years and a Silicon Valley startup company for two years. He received his Ph.D. from Texas Tech University in 1992. His love affair with machine learning began in the early 1990s when he was working at the NSA and continues today at SJSU where he has supervised vast numbers of master's student projects, most of which involve a combination of information security and machine learning.

Readings in Virtual Research Ethics Elizabeth A. Buchanan, 2004-01-01 Provides an in-depth look at the emerging field of online research and the corresponding ethical dilemmas. Issues covered include autonomy, justice, and benevolence, informed consent, privacy, ownership of data, research with minors, and respect for persons. Network Data Analytics K. G. Srinivasa, Siddesh G. M., Srinidhi H., 2018-04-26 In order to carry out data analytics, we need powerful and flexible computing software. However, the software available for data analytics is often proprietary and can be expensive. This book reviews Apache tools which are open source and easy to use. After providing an overview of the background of data analytics, covering the different types of analysis and the basics of using Hadoop as a tool, it focuses on different Hadoop ecosystem tools like Apache Flume, Apache Spark, Apache Storm, Apache Hive, R, and Python which can be used for different types of analysis. It then examines the different machine learning techniques that are useful for data analytics and how to visualize data with different graphs and charts. Presenting data analytics from a practice-oriented viewpoint, the book discusses useful tools and

approaches for data analytics supported by concrete code examples The book is a valuable reference resource for graduate students and professionals in related fields and is also of interest to general readers with an understanding of data analytics
