Halligan, Ian Robertson, 2014-01-14 Spatial neglect is a profound clinical problem as well as intriguing scientific problem In the last ten years there has been an explosion of interest in this disorder which as a result is no longer viewed as a single entity but rather as a number of different disorders This book is an attempt to bring the reader up to date with the latest advances in understanding neglect at least insofar as this contributes to better clinical assessment management and treatment This is not a book for the specialist researcher in the neuropsychology of neglect and attention Rather it is a book aimed at clinicians student and trained from all disciplines involved in the assessment management and treatment of neglect The book begins with the description of four cases manifesting different types of unilateral neglect The reader is introduced to different aspects of neglect through these patients These distinctions include those between personal and extrapersonal neglect motor versus sensory neglect and many others The reader is also introduced to other phenomena that are closely related to neglect including anosognosia and impaired sustained attention The latest methods of assessment of neglect are also described as are methods of treatment again with reference to the four introductory specimen cases *The Cambridge Handbook of Visuospatial Thinking* Priti Shah, Akira Miyake, 2005-07-18 The ability to navigate across town comprehend an animated display of the functioning of the human heart view complex multivariate data on a company's website or to read an architectural blueprint and form a three dimensional mental picture of a house are all tasks involving visuospatial thinking The field of visuospatial thinking is a relatively diverse interdisciplinary research enterprise An understanding of visuospatial thinking and in particular how people represent and process visual and spatial information is relevant not only to cognitive psychology but also education geography architecture medicine design computer science artificial intelligence semiotics and animal cognition The goal of this book first published in 2005 is to present a broad overview of research on visuospatial thinking that can be used by researchers as well as students interested in this topic in both basic research and applied naturalistic contexts *Developmental Disorders of the Frontostriatal System* John L. Bradshaw, Peter G. Enticott, 2014-08-21 In this book the author discusses a range of common neurodevelopmental disorders affecting young people autism depression schizophrenia ADHD Tourette's Syndrome and obsessive compulsive disorder from the unique perspective of their proposed common origin in the function and dysfunction of the brain's frontostriatal system Throughout

the book the author systematically compares and contrasts them from a biological clinical and evolutionary standpoint viewing them as extensions of normal personality attributes which in less extreme form may possess certain behavioural advantages explaining their persistence in the general population The result is a unique up to date and wide ranging discussion of these disorders that draws upon biology genetics neuropsychology neuropathology neuroimaging and clinical presentation and treatment It will be of interest to advanced students researchers and practitioners in neuropsychology neuropsychiatry psychiatry and clinical psychology

Classic Cases in Neuropsychology Christopher Code, 2003 From a contemporary perspective Classic Cases in Neuropsychology Volume II reviews important and significant cases described in historical and modern literature where brain damage has been sustained The single case study has always been of central importance to the discipline of neuropsychology Cognitive neuropsychology and cognitive neurolinguistics search for universal structures in thought processes and single patients are an important means to that end The role of the single case study in the historical development of the field and its increasing contribution to contemporary work is therefore recognised as crucial This follow up to the successful Classic Cases in Neuropsychology 1996 brings together more of the important case investigations which have shaped the way we think about the relationships between brain behaviour and cognition The book includes cases from the rich history of neuropsychology as well as important contemporary case studies in the fields of memory language and perception Some of the cases described are rare some are seminal in the field many were the first of their type to be described and gave rise to new theories and some are still controversial As in the first volume each chapter highlights the relevance of the case to the development of neuropsychology and discusses the theoretical implication of the findings Classic Cases in Neuropsychology Volume II will be essential reading for students and researchers alike in the fields of neuropsychology and neuroscience It will also be of interest to speech and language pathologists therapists and clinicians in this area

Neurobehavioural Disability and Social Handicap Following Traumatic Brain Injury Tom M. McMillan, Rodger Ll. Wood, 2013-11-12 Persisting neurobehavioural disability follows many forms of serious brain injury and acts as a major constraint on social independence Rehabilitation services are often not organised in a way which addresses the needs of people with such disability and relatively few professionals have experience in the clinical management of complex disability patterns which comprise the neurobehavioural syndrome This book is a compilation of chapters written by a group of clinicians with experience of post acute brain injury rehabilitation to ameliorate the social handicap experienced by a growing number of people who survive serious brain injury The aim of the book is to describe the nature of neurobehavioural disability how it translates into social handicap and what can be done to address the problems generated by such handicap through social and behavioural rehabilitation vocational training and family education Consideration is also given to evaluating post acute rehabilitation methods and selecting the most appropriate form of rehabilitation both in terms of clinical and cost effectiveness The book is aimed at clinical psychologists psychiatrists and neurologists working in brain

injury rehabilitation plus all the rehabilitation disciplines and social workers The book will also be of interest to relatives of brain injured people who are seeking a better knowledge base in order to understand neurobehavioural disability Additionally the book should be helpful to the growing number of therapy care assistants case managers and support workers responsible for the day to day care of brain injured people in the community

Developmental Neuropsychology Vicki Anderson, Elisabeth Northam, Jacqui Wrennall, 2014-03-05 This book addresses key issues in child neuropsychology but differs from other books in the field in its emphasis on clinical practice rather than research issues Although research findings are presented they are described with emphasis on what is relevant for assessment treatment and management of pediatric conditions The authors have chosen to focus on a number of areas First the text examines the natural history of childhood CNS insult highlighting studies where children have been followed over time to determine the impact of injury on ongoing development Second processes of normal and abnormal cerebral and cognitive development are outlined and the concepts of brain plasticity and the impact of early CNS insult discussed Finally using a number of common childhood CNS disorders as examples the authors develop a model which describes the complex interaction among biological psychosocial and cognitive factors in the brain injured child The text will be of use on advanced undergraduate courses in developmental neuropsychology postgraduate clinical training programmes and for professionals working with children in clinical psychology clinical neuropsychology and in educational and rehabilitation contexts

Neuropsychology of Art Dahlia W. Zaidel, 2013-04-15 The book provides extensive up to date neuropsychological and neuroscientific background for understanding the brain's modulation of art production in both the visual and musical arts It is the first time that evolutionary biological and neuropsychological issues and evidence are brought to bear in a single book to explain the relationship between multiple components of the arts and the brain It is also the first time that there is extensive description of consequences of brain damage in many established artists and what this implies to the brain's control of art

Communication Disorders Following Traumatic Brain Injury Skye McDonald, Chris Code, Leanne Togher, 2016-05-06 There are very few books available which are concerned with the unique communication problems that can come with traumatic brain injury TBI In recent years there has emerged a realisation that these difficulties in communication are closely tied to the cognitive behavioural and social problems observed following traumatic brain injury This is changing the way people with TBI are assessed and is generating new approaches to rehabilitation This volume will be of interest to psychologists speech pathologists and therapists and linguists Clinicians and researchers working with people with traumatic brain injury and their students will find it a comprehensive source of contemporary approaches to characterising the communication problems of people with TBI and for planning rehabilitation
