Spatial Evolutionary Modeling:

Spatial Evolutionary Modeling Roman Krzanowski, Jonathan Raper, 2001 Annotation Evolutionary models e.g genetic algorithms artificial life explored in other fields for the past two decades are now emerging as an important new tool in GIS for a number of reasons First they are highly appropriate for modeling geographic phenomena Secondly geographical problems are often spatially separate broken down into local or regional problems and evolutionary algorithms can exploit this structure Finally the ability to store manipulate and visualize spatial data has increased to the point that space time attribute databases can be easily handled Innovations In GIS 5 Steve Carver, 2003-12-16 This text reflects the interdisciplinary nature of GIS research and includes coverage of such themes as virtual GIS spatial analysis artificial intelligence spatial agents and fuzzy systems and space time GIS and GIS applications *Modeling Behavior in Complex Public Health Systems* Christopher Keane, Christopher R. Keane, MPH, ScD, 2013-09-27 This graduate text is the first to present methods for modeling health behavior dynamics using numerous online interactive simulations downloadable programs and examples of applications to planning interventions The book examines behaviors that range from simple individual health protective actions to complex cooperative public health actions It provides a user friendly and effective method for teaching systems thinking a core competency now required by the Association of Schools of Public Health The text presents evolutionary and ecological models of health behavior which readers first explore using interactive online simulations The fundamental principles of these models are explained through the book's narrative and demonstrated through the use of simple board games The text then shows how to translate these board games into computational models using Netlogo a free user friendly software Thus no computer programming background is required Readers will learn the basics of agent based modeling of individual behavior social network behavior organizational behavior spread of disease and a variety of public health interventions Applying these methods to public health systems sample models introduce the dynamics of networks of organizations and how they can interact to protect health A unifying theme throughout is how complex individual and collective health behavior develop from simple individual health decisions or behavior repeated over time The book also includes a student's models at successive stages of learning including her early stage incorrect program which readers can themselves try to correct Students will learn to create their own models use them to conduct simulated experiments and apply these methods to planning and evaluating behavior change interventions Each chapter provides online interactive models and downloadable sample programs Key Features Uses interactive simulation for modeling health behavior dynamics for complex public health systems Demonstrates agent based modeling of individual health behavior network behavior public health intervention effects and the spread of disease Teaches readers to create models that can improve their local needs assessments program logic modeling and program planning and evaluation Includes numerous interactive online simulations downloadable programs and examples of applications to planning interventions Facilitates

systems thinking a required core competency *Evolution, Monitoring and Predicting Models of Rockburst* Chunlai Wang, 2017-12-13 This open access book focuses on investigating predicting precursor information and key points of rockburst in mining engineering through laboratory experiment theoretical analysis numerical simulation and case studies Understanding the evolution patterns for the microstructure instability of rock is a prerequisite for rockburst prediction The book provides a guide for readers seeking to understand the evolution patterns for the microstructure of rock failure the predicting key point of rock failure and the rockburst predicting model It will be an essential reference to understand mechanism of rockburst and sheds new light on dynamic disasters prediction Chapters are carefully developed to cover 1 The evolution patterns for the microstructure instability of rock 2 Rockburst hazard monitoring and predicting criterion and predicting models The book addresses the issue with a holistic and systematic approach that investigates the occurrence mechanism of rockburst based on the evolution patterns for the microstructure of rock failure and establishes the predicting model of rockburst This book will be of interest to researchers of mining engineering rock mechanics engineering and safety engineering *Phase-field Modeling of Multi-domain Evolution in Ferromagnetic Shape Memory Alloys and of Polycrystalline Thin Film Growth* Christian Mennerich, 2014-05-13 The phase field method is a powerful tool in computer aided materials science as it allows for the analysis of the time spatial evolution of microstructures on the mesoscale A multi phase field model is adopted to run numerical simulations in two different areas of scientific interest Polycrystalline thin films growth and the ferromagnetic shape memory effect FFT techniques norm conservative integration and RVE methods are necessary to make the coupled problems numerically feasible *Spatially Structured Evolutionary Algorithms* Marco Tomassini, 2005-12-19 Evolutionary algorithms EAs is now a mature problem solving family of heuristics that has found its way into many important real life problems and into leading edge scientific research Spatially structured EAs have different properties than standard mixing EAs By virtue of the structured disposition of the population members they bring about new dynamical features that can be harnessed to solve difficult problems faster and more efficiently This book describes the state of the art in spatially structured EAs by using graph concepts as a unifying theme The models their analysis and their empirical behavior are presented in detail Moreover there is new material on non standard networked population structures such as small world networks The book should be of interest to advanced undergraduate and graduate students working in evolutionary computation machine learning and optimization It should also be useful to researchers and professionals working in fields where the topological structures of populations and their evolution plays a role **Random Field Models in Earth Sciences** George Christakos, 2013-10-22 This book is about modeling as a principal component of scientific investigations In general terms modeling is the fundamental process of combining intellectual creativity with physical knowledge and mathematical techniques in order to learn the properties of the mechanisms underlying a physical phenomenon and make predictions The book focuses on a specific class of models namely random field models and certain of

their physical applications in the context of a stochastic data analysis and processing research program The term application is considered here in the sense wherein the mathematical random field model is shaping but is also being shaped by its objects This book explores the application of random field models and stochastic data processing to problems in hydrogeology geostatistics climate modeling and oil reservoir engineering among others Researchers in the geosciences who work with models of natural processes will find discussion of Spatiotemporal random fields Space transformation Multidimensional estimation Simulation Sampling design Stochastic partial differential equations Landscape Erosion and Evolution Modeling Russell S. Harmon, William W. Doe III, 2012-12-06 Landscapes are characterized by a wide variation both spatially and temporally of tolerance and response to natural processes and anthropogenic stress These tolerances and responses can be analyzed through individual landscape parameters such as soils vegetation water etc or holistically through ecosystem or watershed studies However such approaches are both time consuming and costly Soil erosion and landscape evolution modeling provide a simulation environment in which both the short and long term consequences of land use activities and alternative land use strategies can be compared and evaluated Such models provide the foundation for the development of land management decision support systems Landscape Erosion and Evolution Modeling is a state of the art interdisciplinary volume addressing the broad theme of soil erosion and landscape evolution modeling from different philosophical and technical approaches ranging from those developed from considerations of first principle soil water physics and mechanics to those developed empirically according to sets of behavioral or empirical rules deriving from field observations and measurements The validation and calibration of models through field studies is also included This volume will be essential reading for researchers in earth environmental and ecosystem sciences hydrology civil engineering forestry soil science agriculture and climate change studies In addition it will have direct relevance to the public and private land management communities Computation and Visualization for Understanding Dynamics in Geographic Domains May Yuan, Kathleen S. Hornsby, 2007-12-26 The world is ever changing and a comprehensive understanding of the world will not be achieved without theoretical and methodological advances to decode complex dynamics in human and environmental systems Computation and Visualization for the Understanding of Dynamics in Geographic Domains A Research Agenda synthesizes key ideas and issues Advances in Computation and Intelligence Lishan Kang, 2008-12-08 This book constitutes the refereed proceedings of the Third International Symposium on Intelligence Computation and Applications ISICA 2008 held in Wuhan China in December 2008 The 93 revised full papers were carefully reviewed and selected from about 700 submissions The papers are organized in topical sections on computational intelligence evolutionary computation evolutionary multi objective and dynamic optimization evolutionary learning systems neural networks classification and recognition bioinformatics and bioengineering evolutionary data mining and knowledge discovery intelligent GIS and control theory of intelligent computation combinational and numerical optimization as well as real world applications
