Biosocial Becomings Tim Ingold,Gisli Palsson,2013-06-13 All human life unfolds within a matrix of relations which are at once social and biological Yet the study of humanity has long been divided between often incompatible social and biological approaches Reaching beyond the dualisms of nature and society and of biology and culture this volume proposes a unique and integrated view of anthropology and the life sciences Featuring contributions from leading anthropologists it explores human life as a process of becoming rather than being and demonstrates that humanity is neither given in the nature of our species nor acquired through culture but forged in the process of life itself Combining wide ranging theoretical argument with in depth discussion of material from recent or ongoing field research the chapters demonstrate how contemporary anthropology can move forward in tandem with groundbreaking discoveries in the biological sciences

Blue Biotechnology Stephane La Barre,Stephen S. Bates,2018-09-06 With its integral treatment of ecosystem and resource management this is the only overview of the field to address current thinking and future trends All contributions have been written with the novice in mind explaining the basics and highlighting recent developments and achievements Unmatched in scope this two volume reference covers both traditional and well established areas of marine biotechnology such as biomass production alongside such novel ones as biofuels biological protection of structures and bioinspired materials In so doing it ties together information usually only found in widely dispersed sources to assemble a grand unified view of the current state of and prospects for this multi faceted discipline The combination of the breadth of

topics and the focus on modern ideas make this introductory book especially suitable for teaching purposes and for guiding newcomers to the many possibilities offered by this booming field The Cancer Handbook, 2 Volume Set Malcolm Alison, 2007-07-30 The Cancer Handbook provides a comprehensive overview of scientific and clinical information in cancer research and medicine oncology This area is one of the most intensively studied in biology and medicine resulting in a huge amount of new information being published every year This book summarizes and explains key facts and recent developments It is aimed at a wide variety of readers who need easy access to knowledge concerning all major aspects of cancer biology without too much clinical detail or specialist research material The Cancer Handbook stands out from existing oncology textbooks and reference works in that it bridges the gap between the molecular biology of cancer and clinical diagnosis and treatment As more and more laboratory research is applied to clinical management e g the use of monoclonal antibodies as drugs it is important that clinicians understand the aetiology of the disease and the molecular basis of the new therapeutic approaches It is also important for laboratory scientists to appreciate the potential applications of their research and the practical issues involved in translating it to clinical practice For this second edition all the sections have been fully revised and updated with new chapters addressing important topics that have gained prominence in recent years New editors and authors have brought additional expertise to the project For example in the section on the Molecular and Cellular Basis of Cancer there are new chapters on stem cells epigenetics and microRNAs as well as chapters on the links between cancer and development and inflammation In the Treatment section the emphasis is now on multidisciplinary team management of different cancers plus there are new chapters on clinical trial design RNA interference and rational drug design The page design and the quality of the diagrams has been improved with all illustrations now in full colour The glossary has been made more informative and easy to use Tissue Repair and Regeneration Hiranmoy Das, 2025-09-24

This book describes how stem cells regenerate any damaged tissues including cutaneous wounds as well as the cornea musculoskeletal tissue heart and other organs This book focuses on stem cell mediated secretory factors how those factors actually mediate the regeneration process for successful regeneration of the tissue Readers will discover what signaling processes are involved in the regeneration process and whether they are different depending on the origin of the tissues and also the intracellular mechanism that aids in successful regeneration This is an ideal reference for graduate students and post doc researchers and faculty interested in the research and delivery of stem cells for regenerative therapy
