Studies in Inductive Probability and Rational Expectation Theo A.F. Kuipers, 2012-12-06 3 in philosophy and therefore in metaphilosophy cannot be based on rules that avoid spending time on pseudo problems Of course this implies that if one succeeds in demonstrating convincingly the pseudo character of a problem by giving its solution the time spent on it need not be seen as wasted We conclude this section with a brief statement of the criteria for concept explication as they have been formulated in several places by Carnap Hempel and Stegmüller Hempel's account 13J Chapter 1 is still very adequate for a detailed introduction The process of explication starts with the identification of one or more vague and perhaps ambiguous concepts the so called explicanda Next one tries to disentangle the ambiguities This however need not be possible at once Ultimately the explicanda are to be replaced not necessarily one by one by certain counterparts the so called explicata which have to conform to four requirements They have to be as precise as possible and as simple as possible In addition they have to be useful in the sense that they give rise to the formulation of theories and the solution of problems The three requirements of preciseness simplicity and usefulness have of course to be pursued in all concept formation Studies in Inductive Logic and Probability Rudolf Carnap, Richard C. Jeffrey, 1980-01-01 A basic system of inductive logic An axiomatic foundation for the logic of inductive generalization A survey of inductive systems On the condition of partial exchangeability Representation theorems of the de Finetti type De Finetti's generalizations of exchangeability The structure of probabilities defined on first order languages A subjectivist's guide to objective chance **Studies in Inductive Logic and Probability, Volume II** Richard C. his *Structures in Science* Kluwer 2001 Kuipers defends a dialectical interaction between science and philosophy in that he views philosophy of science as a meta science which formulates cognitive structures that provide heuristic patterns for actual scientific research including design research In addition Kuipers pays considerable attention to the computational approaches to philosophy of science as well as to the ethics of doing research Thomas Nickles David Atkinson Jean Paul van Bendegem Maarten Franssen Anne Ruth Mackor Arno Wouters Erik Weber Helena de Preester Eric Scerri Adam Grobler Andrzej Wisniewski Alexander van den Bosch Gerard Vreeswijk Jaap Kamps Paul Thagard Emma Ruttkamp Robert Causey Henk Zandvoort comment on these ideas of Kuipers and many present their own account The present book also contains a synopsis of *Structures in Science* It can be read independently of the first volume of *Essays in Debate with Theo Kuipers* which is devoted to Kuipers *From Instrumentalism to Constructive Realism* 2000 **Nomic Truth Approximation**

Revisited Theo A. F. Kuipers, 2019-03-05 This monograph presents new ideas in nomic truth approximation It features original and revised papers from a formal philosopher of science who has studied the concept for more than 35 years Over the course of time the author's initial ideas evolved He discovered a way to generalize his first theory of nomic truth approximation viz by dropping an unnecessarily strong assumption In particular he first believed to have to assume that theories were maximally specific in the sense that they did not only exclude certain conceptual possibilities but also that all non excluded possibilities were in fact claimed to be nomically possible Now he argues that the exclusion claim alone or for that matter the inclusion claim alone is sufficient to motivate the formal definition of being closer to the nomic truth The papers collected here detail this generalized view of nomic truthlikeness or verisimilitude Besides this the book presents in adapted form the relation with several other topics such as domain revision aesthetic progress abduction inference to the best explanation pragmatic aspects probabilistic methods belief revision and epistemological positions notably constructive realism Overall the volume presents profound insight into nomic truth approximation This idea seeks to determine how one theory can be closer to or more similar to the truth about what is nomically e g physically chemically biologically possible than another theory As a result it represents the ultimate goal of theory oriented empirical science Theo Kuipers is the author of *Studies in Inductive Probability and Rational Expectation* 1978 *From Instrumentalism to Constructive Realism* 2000 and *Structures in Science* 2001 He is the volume editor of the *Handbook on General Philosophy of Science* 2007 In 2005 there appeared two volumes of *Essays in Debate with Theo Kuipers* entitled *Confirmation Empirical Progress and Truth Approximation* and *Cognitive Structures in Scientific Inquiry* [Philosophical Lectures on Probability](#) Bruno de Finetti, 2008-05-20 Bruno de Finetti 1906 1985 is the founder of the subjective interpretation of probability together with the British philosopher Frank Plumpton Ramsey His related notion of exchangeability revolutionized the statistical methodology This book based on a course held in 1979 explains in a language accessible also to non mathematicians the fundamental tenets and implications of subjectivism according to which the probability of any well specified fact F refers to the degree of

belief actually held by someone on the ground of her whole knowledge on the truth of the assertion that F obtains
