

Performance Testing, Cognition and Assessment

Selected papers from the 15th Language Testing Research Colloquium, Cambridge and Arnhem, August 1993

This volume contains a selection of research papers that were presented at the 15th Annual Language Testing Research Colloquium (LTRC).

The 1993 Colloquium was jointly hosted by two major testing organisations - the University of Cambridge Local Examinations Syndicate (UCLES) in Cambridge, and CITO in Arnhem, in the Netherlands. At the Cambridge venue, the papers were presented on the themes of performance testing, while at Arnhem they covered aspects of communication in relation to cognition and assessment. A selection of 16 papers was made in order to achieve a balanced coverage of these themes for publication purposes.

Key features of this edited collection include:

- contributions reporting research into the testing of speaking and writing, especially in relation to raters, tasks and assessment criteria
- contributions exploring the application of various statistical methods in language test validation
- contributions addressing the issues relating to language testing in specific contexts and with particular candidate groups.

This volume will be of relevance to language testing specialists concerned with the design, development, delivery and validation of performance tests, as well as to academic researchers and graduate students interested in the complex relationship between cognition and assessment.

Treatment as a tool for investigating cognition Lyndsey Nickels, Saskia Kohnen, Brenda Rapp, 2018-02-05 Cognitive neuropsychological research studies of people with cognitive deficits have typically been directed either at investigating methods of intervention or at furthering our understanding of normal and impaired cognition This book reports on research that combines these goals using studies that use intervention as a tool for investigating hypotheses about the functioning of the human cognitive system The introductory chapter discusses some of the unique and more general difficulties that this approach faces while the five reports describe intervention studies with children and adults with cognitive impairments studies which investigate current theories of cognition The studies demonstrate that the use of intervention to study cognition is a promising and valuable methodology Aiming to promote wider use of these combined methods this book makes it clear that while the approach faces various methodological and interpretative challenges it has the advantage of providing advances on issues of theory while at the same time providing treatment to participants and bringing together what have been largely separate research traditions This book was originally published as a special issue of Cognitive Neuropsychology

New Methods in Cognitive Psychology Daniel Spieler, Eric Schumacher, 2019-10-28 This book provides an overview of cutting edge methods currently being used in cognitive psychology which are likely to appear with increasing frequency in coming years Once built around univariate parametric statistics cognitive psychology courses now seem deficient without some contact with methods for signal processing spatial statistics and machine learning There are also important changes in analyses of behavioral data e g hierarchical modeling and Bayesian inference and there is the obvious change wrought by the advancement of functional imaging This book begins by discussing the evidence of this rapid change for example the movement between using traditional analyses of variance to multi level mixed models in psycholinguistics It then goes on to discuss the methods for analyses of physiological measurements and how these methods provide insights into cognitive processing New Methods in Cognitive Psychology provides senior undergraduates graduates and researchers with cutting edge overviews of new and emerging topics and the very latest in theory and research for the more established topics
