Testing of Communicating Systems XIV Ina Schieferdecker, Hartmut König, Adam Wolisz, 2013-06-05 Testing of Communicating Systems XIV presents the latest international results in both the theory and industrial practice of the testing of communicating systems ranging from tools and techniques for testing to test standards frameworks notations algorithms fundamentals of testing and industrial experiences and issues The tools and techniques discussed apply to conformance testing interoperability testing performance testing Internet protocols and applications and multimedia and distributed systems in general **Testing of Communicating Systems** Dieter Hogrefe, Anthony Wiles, 2003-08-03 This book constitutes the refereed proceedings of the 15 IFIP International Conference on Testing of Communicating Systems TestCom 2003 held in Sophia Antipolis France in May 2003 The 19 revised full papers presented together with three invited contributions were carefully reviewed and selected from 53 submissions The papers are organized in topical section on next generation networks IP and UMTS TTCN 3 automata based test methodology and test design tools and methodology SDL 2005: Model Driven Andreas Prinz, Rick Reed, Jeanne Reed, 2005-06-02 This volume contains the papers presented at the 12th SDL Forum Grimstad Norway The SDL Forum was first held in 1982 and then every two years from 1985 Initially the Forum was concerned only with the Specification and Description Language that was first standardized in the 1976 Orange Book of the International Telecommunication Union ITU Since then many developments took place and the language has undergone several changes However the main underlying paradigm has survived and it is the reason for the success of the Specification and Description Language in many projects This paradigm is based on the following important principles of distributed applications Communication large systems tend to be described using smaller parts that communicate with each other State the systems are described on the basis of an explicit notion of state State change the behavior of the system is described in terms of local changes of the state The original language is not the only representative for this kind of paradigm so the scope of the SDL Forum was extended quite soon after the first few events to also include other ITU standardized languages of the same family such as MSC ASN.1 and TTCN This led to the current scope of System Design Languages covering all stages of the development process including in particular SDL MSC UML ASN.1 eODL TTCN and URN The focus is clearly on the advantages to users and how to get from these languages the same advantage given by the ITU Specification and Description Language code generation from high level specifications *NETWORKING 2008 Ad Hoc and Sensor Networks, Wireless Networks, Next Generation Internet* Amitabha Das, 2008-04-25 This book constitutes the refereed proceedings of the 7th International IFIP TC6 Networking Conference NETWORKING 2008 held in Singapore in May 2008 The 82 revised full papers were carefully reviewed and selected from numerous submissions for inclusion in the book The papers are organized in topical sections on ad hoc and sensor networks design and optimization MAC protocol overlay networking and routing next generation internet authentication modeling and performance evaluation multicast network

Software safety is a crucial aspect during the development of modern safety critical systems. However, safety is a system level property and therefore must be considered at the system level to ensure the whole system's safety. In the software development process, formal verification and functional testing are complementary approaches which are used to verify the functional correctness of software; however, even perfectly reliable software could lead to an accident. The correctness of software cannot ensure the safe operation of safety critical software systems. Therefore, developing safety critical software requires a more systematic software and safety engineering process that enables the software and safety engineers to recognize the potential software risks. For this purpose, this dissertation introduces a comprehensive safety engineering approach based on STPA for Software Intensive Systems called STPA SwISs which provides seamless STPA safety analysis and software safety verification activities to allow the software and safety engineers to work together during the software development for safety critical systems and help them to recognize the associated software risks at the system level.

Formal Approaches to Software Testing Alexandre Petrenko, 2004-01-28 This book constitutes the thoroughly refereed post proceedings of the Third International Workshop on Formal Approaches to Testing of Software FATES 2003 held in Montreal, Quebec, Canada, on October 6th, 2003. The 18 revised full papers presented were carefully selected from 43 submissions during two rounds of reviewing and improvement. The papers are organized in topical sections on program testing and analysis, test theory and test derivation, algorithms and test methods, and test tools.

Formal Approaches to Software Testing Andreas Ulrich, 2004-01-24 Formal methods provide system designers with the possibility to analyze system models and reason about them with mathematical precision and rigor. The use of formal methods is not restricted to the early development phases of a system, though. The different testing phases can also benefit from them to ease the production and application of effective and efficient tests. Many still regard formal methods and testing as an odd combination. Formal methods traditionally aim at verifying and proving correctness, a typical academic activity, while testing shows only the presence of errors, this is what practitioners do. Nonetheless, there is an increasing interest in the use of formal methods in software testing. It is expected that formal approaches are about to make a major impact on emerging testing technologies and practices. Testing proves to be a good starting point for introducing formal methods in the software development process. This volume contains the papers presented at the 3rd Workshop on Formal Approaches to Testing of Software FATES 2003 that was in a liaison with the IEEE ACM Conference on Automated Software Engineering ASE 2003. This year FATES received 43 submissions. Each submission was reviewed by at least three independent reviewers from the program committee with the help of additional reviewers. Based on their evaluations, 18 papers submitted by authors from 13 different countries were
