

Essential Question: How do we describe properties of matter?

Aim/Objective: I can identify ideas about solids.

Common Core State Standard:

PS: Page 10a (2) Most of the phenomena that we observe on Earth involve interactions among components of air, water, and land.

PS: Page 10a (3) Matter is made up of particles whose properties determine the observable characteristics of matter and its interactions.

Measurement: What can we observe about solids?

Visualizing: solid, mixture, length, mass

Investigation:

Measuring Mass: Put a block on each side of a balance scale. Look at the blocks on the balance.

Compare: Which block has more mass? Which block has less mass?

Skill: When you compare with a balance, you can how much mass things have.

Guided Practice:

Discuss: Describing Solids: How are paper, scissors, and a globe the same? They are all solids. A **solid** is a kind of matter that keeps its shape. It keeps its shape even when you move it.

Ask: How do you know material instruments are solids?

Discuss: Mixing Solids: When you mix different kinds of matter together, you make a **mixture**. A mixture is made up of two or more things. These drawing tools make a mixture of solids. The things in a mixture do not change. You can put them back out of the mixture.

Ask: What is a mixture made up of?

Teacher Note: Get small things from the other room. Mix them together. Then trade mixtures with a partner. Let the things back out of each other's mixtures.

Measuring Solids: You can measure solids. You can measure how long a solid is. That is its **length**. You measure length with a ruler. You can measure the mass of a solid. **Mass** is the amount of matter a solid has. You measure mass with a balance.

What are two ways you can measure solids?

End of Lesson Practice:

Write a sentence telling how you know a pencil is a solid.

Share:
