The Blood Platelet In Transfusion Therapy

William L. Carroll, Jonathan L. Finlay

The Blood Platelet In Transfusion Therapy:

The Blood Platelet in Transfusion Therapy Tibor Jack Greenwalt, Graham A. Jamieson, 1978 **Platelet Transfusion Therapy**, 1986 **Pediatric Transfusion Medicine** Duke Kasprisin, Naomi Luban, 1987-07-31 This two volume set is an in depth examination of the unique complexities that exist in transfusing pediatric patients It thoroughly examines transfusion therapy in neonates genetic hematologic disorders and pediatric oncology and it reviews risks and administration techniques unique to pediatrics *Platelets* Alan D. Michelson, 2011-08-29 *Platelets* Second Edition is the definitive current source of state of the art knowledge about platelets and covers the entire field of platelet biology pathophysiology and clinical medicine Recently there has been a rapid expansion of knowledge in both basic biology and the clinical approach to platelet related diseases including thrombosis and hemorrhage Novel platelet function tests drugs blood bank storage methods and gene therapies have been incorporated into patient care or are in development This book draws all this information into a single comprehensive and authoritative resource First edition won Best Book in Medical Science Award from the Association of American Publishers Contains fourteen new chapters on topics such as platelet genomics and proteomics inhibition of platelet function by the endothelium clinical tests of platelet function real time in vivo imaging of platelets and inherited thrombocytopenias A comprehensive full color reference comprising over 70 chapters 1400 pages and 16 000 references *Platelet Transfusion Therapy*, 1987 *Supportive Care in Cancer Therapy* Donald J. Higby, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good indepth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered *Cancer Treatment and Research* is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more **Bloodtransfusion and Problems of Bleeding** C.Th. Smit Sibinga, P.C. Das, J.J. van Loghem, 2012-12-06 J J Van Loghem Previously to this symposium five others have taken place in Groningen The first one in 1976 This yearly scientific happening has continued It has greatly stimulated the interest in blood transfusion

and all allied disciplines in our country It is clear that these meetings are organized not only by a good scientist but at the same time by a gifted organizer who as director of the Red Cross Blood Bank Groningen Drenthe has shown that the heavy load of daily routine work can very well be combined with a large amount of experimental and clinical research in blood component therapy coagulation disorders blood group genetics and serology the latter in cooperation with the Blood Group laboratory of the University Hospital Groningen under the directorship of Dr Van Dijk All these activities show how much a well organized blood bank can contribute to a national blood transfusion organization

Clinical Benefits of

Leukodepleted Blood Products Joseph Sweeney, 2013-06-29 Joseph Sweeney Andrew Heaton the presence of allogeneic leukocytes in blood products received little attention until the mid 1950s when these passenger cells were implicated in the etiology of febrile transfusion reactions and early strategies based on centrifugation were developed to effect their removal In recent decades and particularly in the past five years there has been an accumulation of literature implicating leukocytes in a wide variety of undesirable reactions to blood transfusion White cells are the least numerous of the cellular elements in blood and ratios of white cells to platelets and white cells to red cells are approximately 1:15 to 1:1000 respectively This ratio is maintained in whole blood but may be altered slightly in the process of component preparation Any production or processing step which intentionally decreases this ratio will result in a product which can be described as white cell depleted It has however become more common to define the outcome as a residual white cell content rather than a decrease in cellular ratios although the latter makes more sense on theoretical grounds since depletion of white cells needs to be put in the context of any unintentional loss of red cells or platelets The end result of this intentional processing step therefore is generally expressed as the residual absolute number of white cells or as the degree of difference in white cell content the latter expressed as either a percentage change or as a logarithmic reduction

The HLA System John Lee,2012-12-06 This volume documents our growing understanding of the human major histocompatibility complex The application of this information is ever more important as the limits of transplantation continue to be reduced including the recent success of bone marrow transplantation between unrelated but closely matched individuals In addition the need to transfuse platelets in the face of immunologic barriers continues to challenge transfusion services Thus the serologic information summarized in this volume is essential for optimal patient care At the same time recombinant DNA technology has led to a revolution in our understanding of many aspects of basic biology Among the advances has been the initial characterization of the structure of some HLA loci While this will ultimately improve clinical services constant reference to serologic data is essential so that the powerful new techniques can be applied in the most effective ways The timing of the First Red Cross International Histocompatibility Workshop is fortunate as it brings together experts from around the world to address the state of the art We are all grateful to Dr John Lee and his colleagues for organizing the workshop and for bringing together in this volume the material to be presented in Beijing during October 17-23 1990 Leon W Hoyer M D Transfusion Therapy Roanne C.
