## **The Corals Of Hong Kong:**

**The Corals of Hong Kong** P.J.B. Scott, 1984-05-01 This book provides a comprehensive and up to date review and critique of corporate governance reforms and related financial reforms in China during the country's transition to a market economy involving its enterprise banking and capital markets sectors      Perspectives on Marine Environmental Change in Hong Kong and Southern China, 1977-2001 Brian Morton, 2003-01-01 Here eminent marine scientists and local researchers who have attended the workshops express their views on the many changes in Hong Kong's surrounding waters      **The Sea Shore Ecology of Hong Kong** Brian Morton, John Morton, 1983-04-01 Hong Kong is strategically located between the temperate Japonic and the great tropical Indo West Pacific zoogeographic provinces Influenced by the currents of the South China Sea and the huge outflow of fresh water from the Pearl River Hong Kong's marine flora and fauna are extremely diverse Temperate species may appear if only briefly during the cooler winter months Conversely air and water temperatures remain high enough for a strong tropical component Hong Kong is comparatively rich in mangrove stands and reef corals are well developed subtidally There is a strong north west to south east salinity gradient further enhancing diversity Geologically the Hong Kong shore is a drowned coastline deeply incised and with former mountain peaks represented by numerous off shore islands This book reviews the factors creating and maintaining Hong Kong's living shore and describes the wide range of plants and animals found within the intertidal boundaries of the shore A full range from exposure to shelter is to be found from communities of the sheer rock faces beaten by the storm waves of the South China Sea to the denizens of mudflats in high shelter at the heads of harbours and inlets For the first time the occupants of these various shores are illustrated and described both as individual species and as components of a rich mosaic of life The factors of pollution and development that are destroying the diversity of the rich complex of shores are described      **The Marine Flora and Fauna of Hong Kong and Southern China V** Brian Morton, 2000-12-01 From 6-25 April 1998 the Tenth International Workshop on the Marine Flora and Fauna of Hong Kong and South China was convened at the Swire Institute of Marine Science of the University of Hong Kong Thirteen scientists from six countries and twenty two scientists and students from Hong Kong investigated aspects of the marine flora and fauna of the Cape d'Aguiar Marine Reserve and the southeastern waters of Hong Kong This was to obtain more information about the newly established reserve the only one in Hong Kong and the changes that had taken place on the seabed in the southern waters since they were dredged between 1992-1995 respectively and in the latter case to see if there had been any subsequent benthic recovery The Proceedings of the workshop contains thirty six original research papers dealing with aspects of the taxonomy and anatomy behaviour and physiology of marine life in Hong Kong and Southern China Papers also explore aspects of Hong Kong's marine parks and reserves including the pollution of Hong Kong's marine life with particular reference to the Cape d'Aguiar Marine Reserve established only in 1996 and the fauna of its territorial southern waters The Workshop was sponsored by the University of Hong Kong the Croucher Foundation and

the K C Wong Foundation so as to bring eminent overseas scientists to Hong Kong to work with their local colleagues and students The success of the workshop concept is self evident in the contents and scope of these proceedings This was the eighth workshop convened in Hong Kong since 1977 and these proceedings have become the single most important body of information on the long term changes that have taken place in its marine environment over an extended time frame The volumes are also the largest regional repository of information on the marine life of the territorial waters of Hong Kong and the northern rim of the South China Sea For those with any interest in Hong Kong s marine environment therefore this proceedings and its predecessors are essential reading

**Reef Fishes of Hong Kong** Yvonne Sadovy, Andrew S.

Cornish, 2000-01-01 This book documents the first comprehensive survey of reef fishes ever undertaken in Hong Kong It includes descriptions and colour photographs of over 320 fish species a third of which have never before been recorded here

*The Marine Biology of the South China Sea III* Brian Morton, 1998-07-01 The first conference on the Marine Biology of the South China Sea was convened in Hong Kong in 1990 to celebrate the opening of the Swire Institute of Marine Science The second was convened in Guangzhou China in 1993 The third conference returned to Hong Kong in 1996 and in a continuing pattern of growth was attended by 127 scientists and students from 14 countries and territories Of the 104 keynote addresses papers and posters presented at the meeting 42 are published here following critical peer review under the symposium categories of Taxonomy and Biological Diversity Biology and Ecology and Coastal Zone Management and Conservation of the Biological Resources of the South China Sea Each conference sets its own symposia themes but in view of the rapid perceived decline in the marine environment of the South China Sea and the overexploitation of its resources the 1996 meeting focused its attention on these issues There are many meetings related to marine science convened by the countries of the South China rim Some are national others are international but most are typically convened by agencies and attendance is restricted to an invited few usually senior scientists Europe hosts a European Marine Biology Symposium that is convened in a different country each year and which sets the meeting s themes The proceedings of those meetings constitute one of the most authoritative accounts of the marine biology of European waters The meeting itself provides a forum for scientists and students so that international collaborative research is now a key feature of European marine science First convened in 1996 the 32 symposia are a tribute to international co operation in research in a marine environment that of itself knows no boundaries The South China Sea countries also need such a forum free of political dogma This conference proceedings is the third to help promote such an event hopefully one day at a greater frequency than three years The fourth conference is to be convened in the Philippines in 1999 This volume then is an international perspective on the South China Sea by scientists who research it and

are concerned for its future It contains information that should appeal to marine biologists throughout the world and in particular to those in Asia **Asian Marine Biology 8 (1991)** Brian Morton,1991-12-31 This is the annual journal of the Marine Biological Association of Hong Kong It contains papers on marine subjects of interest to all Asian biologists
