**Dimensions of Creativity** Margaret A. Boden, 1996 Dimensions of Creativity brings together original articles that draw on a range of discipline from the history and sociology of science psychology philosophy and artificial intelligence to ask how creative ideas arise and whether creativity can be objectively defined and measured Dimensions of Creativity brings together original articles that draw on a range of disciplines from the history and sociology of science psychology philosophy and artificial intelligence to ask how creative ideas arise and whether creativity can be objectively defined and measured Margaret Boden and her colleagues Simon Schaffer Gerd Gigerenzer David N Perkins Howard Gardner Colin Martindale and Hans J Eysenck demonstrate that creativity requires not only challenging new ideas but their acceptance by some relevant social group Although some new ideas can arise as novel associations others are generated by exploiting structural features of an existing conceptual space Strong motivations often drive the creators and those who evaluate and perpetuate their work The seven essays although very different are complementary The book can serve as an up to date introduction to the study of creativity in various disciplines The many references provide a way into the relevant literature A Bradford Book

**Artificial Intelligence and Literary Creativity** Selmer Bringsjord, David Ferrucci, 1999-09-01 Is human creativity a wall that AI can never scale Many people are happy to admit that experts in many domains can be matched by either knowledge based or sub symbolic systems but even some AI researchers harbor the hope that when it comes to feats of sheer brilliance mind over machine is an unalterable fact In this book the authors push AI toward a time when machines can autonomously write not just humdrum stories of the sort seen for years in AI but first rate fiction thought to be the province of human genius It reports on five years of effort devoted to building a story generator the BRUTUS 1 system This book was written for three general reasons The first theoretical reason for investing time money and talent in the quest for a truly creative machine is to work toward an answer to the question of whether we ourselves are machines The second theoretical reason is to silence those who believe that logic is forever closed off from the emotional world of creativity The practical rationale for this endeavor and the third reason is that machines able to work alongside humans in arenas calling for creativity will have incalculable worth

Plains and Peaks Regional Library Service System,1989      **The Turing Test** James H. Moor,2012-12-06 In 1950 Alan Turing 1912 1954 published his famous article Computing Machinery and Intelligence in the journal Mind This article is arguably the most influential and widely read article in the philosophy of artificial intelligence Indeed most of the debate in the philosophy of artificial intelligence over the last fifty years concerns issues that were raised and discussed by Turing Turing s genius was not only in developing the theory of computability but also in understanding the impact both practical and philosophical that computing machinery would have Turing believed that computers if properly designed and educated could exhibit intelligent behavior even behavior that would be indistinguishable from human intelligent behavior His vision of the possibility of machine intelligence has been highly inspiring and extremely controversial In this classic article Turing presented his well known imitation game and predicted that about the year 2000 an average interrogator will not have more than 70 per cent chance of making the right identification after five minutes of questioning in the imitation game Based on the results of the Loebner 2000 contest and the accomplishments in the field of AI as impressive as they are Turing s prediction remains unfulfilled      **Advertising: Principles and Practice** Sandra Moriarty,Nancy D. **Transformational Creativity** Robert J. Sternberg,Sareh Karami,2024-03-19 This edited volume brings together leading scholars in diverse disciplines to share their best thinking on how creativity can be conceived of taught for and deployed to serve rather than undermine humanity Transformational creativity as defined in this book is creativity deployed to make a positive meaningful and potentially enduring difference to the world Transformational creativity is compared to transactional creativity which is creativity deployed in search of a reward whether externally or internally generated Chapter 12 is available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com)      *Criminal Behavior* Jacqueline B. Helfgott,2008-03-13 This textbook provides an interdisciplinary overview of theories of crime explanations of how and why criminal typologies are developed literature reviews for each of the major crime categories and discussions of how theories of crime are used at different stages of the criminal justice process      Creativity and Innovation Simona Doboli,Jared B. Kenworthy,Ali A. Minai,Paul B. Paulus,2022-01-01 This book focuses on the emergence of creative ideas from cognitive and social dynamics In particular it presents data models and analytical methods grounded in a network dynamics approach It has long been hypothesized that innovation arises from a recombination of older ideas and concepts but this has been studied primarily at an abstract level In this book we consider the networks underlying innovation from the brain networks supporting semantic cognition to human networks such as brainstorming groups or individuals interacting through social networks and relate the emergence of ideas to the structure and dynamics of these networks Methods described include experimental studies with human participants mathematical evaluation of novelty from group brainstorming experiments neurodynamical modeling of conceptual combination and multi agent modeling of collective creativity The main distinctive features of this book are the breadth of perspectives considered the integration of experiments with theory and a focus on the combinatorial emergence of ideas      Managing Emergent Phenomena Stephen J. Guastello,2001-12-01 Chaos catastrophe self organization and complexity theories nonlinear dynamics now have practical and measurable roles in the functioning of work organizations Managing Emergent Phenomena begins by describing how the concept of an organization has changed from a bureaucracy to a humanistic and organic system to a complex adaptive system The dynamics concepts are then explained along with the most recent research methods for analyzing real data

Applications include work motivation personnel selection and turnover creative thinking by individuals and groups the development of social networks coordination in work groups the emergence of leaders work performance in organizational hierarchies economic problems that are relevant to organizations techniques for predicting the future and emergency management Each application begins with a tight summary of standard thinking on a subject followed by the new insights that are afforded by nonlinear dynamics and the empirical data supporting those ideas Unusual concepts are also encountered such as the organizational unconscious collective intelligence and the revolt of the slaved variables The net results are a new perspective on what is really important in organizational life original insights on familiar experiences and some clear signposts for the next generation of nonlinear social scientists
