**Smolin and Thoft's The Cornea**, 2005 *The Cornea* Gilbert Smolin, Richard A. Thoft, 1983 **Biochemistry of the Eye** Elaine R. Berman, 2013-11-22 My first introduction to the eye came more than three decades ago when my close friend and mentor the late Professor Isaac C Michaelson convinced me that studying the biochemistry of ocular tissues would be a rewarding pursuit I hastened to explain that I knew nothing about the subject since relatively few basic biochemical studies on ocular tissues had appeared in the world literature Professor Michaelson assured me however that two books on eye biochemistry had already been written One of them a beautiful monograph by Arlington Krause 1934 of Johns Hopkins Hospital is well worth reading even today for its historical perspective The other published 22 years later was written by Antoinette Pirie and Ruth van Heyningen 1956 whose pioneering achievements in eye biochemistry at the Nuffield Laboratory of Ophthalmology in Oxford England are known throughout the eye research community and beyond To their credit are classical investigations on retinal corneal and lens biochemistry beginning in the 1940s and continuing for many decades thereafter Their important book written in 1956 on the *Biochemistry of the Eye* is a volume that stood out as a landmark in this field for many years In recent years however a spectacular amount of new information has been generated in ocular biochemistry Moreover there is increasing specialization among investigators in either a specific field of biochemistry or a particular ocular tissue *Comprehensive Manual of Ophthalmology* Ahmed E, 2010-06-15 *Comprehensive Manual of Ophthalmology* in which sufficient information has been provided in easy to understand language with a definite and uniform format Many tables have been incorporated for summarizing key facts about different diseases Enough standard colored illustrations will be of immense help A short list of Further Readings has been added at the end of each chapter for those who want to pursue further on the particular topic I consider this humble endeavor as a mini textbook of ophthalmology in a refreshingly reader friendly fashion which I presume will be quite useful for both undergraduate and postgraduate students residents and even practicing ophthalmologists *Adler's Physiology of the Eye E-Book* Leonard A Levin, Siv F. *Immunology of Eye Diseases* S. Lightman, 2012-12-06 The eye can become involved in immune mediated diseases that affect it alone or as part of a multi organ disease process Much immunological attention has been focused on other organs affected by these processes and the subject of the immunology of eye diseases is a relatively new one Many of these diseases that involve the eye are not life threatening but can result in devastating loss of sight that if bilateral will have major effects on the patient's life Systemic immunological investigations are generally unhelpful in these patients and one of the major problems in this field has been the lack of diseased tissue available for examination to determine the pathological processes involved Our poor understanding of basic mechanisms of disease in the eye has meant that treatment of many of these conditions is often inadequate It has become possible to apply in the eye many of the techniques used to investigate the role of the immune system in other systems Animal models of many of the disease processes have also allowed dissection of the immune response both within and outside the eye It is my belief that a greater understanding of the mechanisms by which the structures in the eye become damaged will allow more specific and effective therapeutic strategies to be devised
