Terrestrial Eocene Oligocene Transition In North America:

The Terrestrial Eocene-Oligocene Transition in North America Donald R. Prothero, Robert J. Emry, 1996-06-13 The transition from the Eocene to the Oligocene epoch occurring approximately 47 to 30 million years ago was the most dramatic episode of climatic and biotic change since the demise of the dinosaurs The mild tropical climates of the Paleocene and early Eocene were replaced by modern climatic conditions and extremes including glacial ice in Antarctica The first part of this book summarizes the latest information in the dating and correlation of the strata of late middle Eocene through early Oligocene age in North America The second part reviews almost all the important terrestrial reptiles and mammals found near the Eocene Oligocene boundary in the White River Chronofauna from the turtles snakes and lizards to the common rodents carnivores oreodonts and deer of the Badlands This is the first comprehensive treatment of these topics in over sixty years and will be invaluable to vertebrate paleontologists geologists mammalogists and evolutionary biologists *Late Cretaceous and Cenozoic Mammals of North America* Michael O. Woodburne, 2004-04-21 This book places into modern context the information by which North American mammalian paleontologists recognize divide calibrate and discuss intervals of mammalian evolution known as North American Land Mammal Ages It incorporates new information on the systematic biology of the fossil record and utilizes the many recent advances in geochronologic methods and their results The book describes the increasingly highly resolved stratigraphy into which all available temporally significant data and applications are integrated Extensive temporal coverage includes the Lancia part of the Late Cretaceous and geographical coverage includes information from Mexico an integral part of the North American fauna past and present *The Evolution of North American Rhinoceroses* Donald R. Prothero, 2005-03-07 An essential reference for all researchers working on the evolution of North American mammals **The Beginning of the Age of Mammals** Kenneth D. The White River Badlands Rachel C. Benton, Dennis O. Terry, Emmett Evanoff, H. Gregory McDonald, 2015-05-25 This guide to the South Dakota region that houses the world's richest fossil beds does an excellent job of presenting the current state of knowledge Choice The forbidding Big Badlands in Western South Dakota contain the richest fossil beds in the world Even today these rocks continue to yield new specimens brought to light by snowmelt and rain washing away soft rock deposited on a floodplain long ago The quality and quantity of the fossils are superb most of the species to be found there are known from hundreds of specimens The fossils in the White River Group and similar deposits in the American west preserve the entire late Eocene through the middle Oligocene roughly 35 30 million years ago and more than thirty million years after non avian dinosaurs became extinct The fossils provide a detailed record of a period of abrupt global cooling and what happened to creatures who lived through it This book is a comprehensive reference to the sediments and fossils of the Big Badlands and also touches on National Park Service management policies that help protect such significant fossils Includes photos and illustrations A worthy successor to the work of O Harra *Journal of Vertebrate Paleontology* **Fossil Record 4**
