Use of the Normalized Difference Vegetation Index (NDVI) to Assess Land Degradation at Multiple Scales

Genesis T. Yengoh, David Dent, Lennart Olsson, Anna E. Tengberg, Compton J. Tucker III, 2015-11-11 This report examines the scientific basis for the use of remotely sensed data particularly Normalized Difference Vegetation Index NDVI primarily for the assessment of land degradation at different scales and for a range of applications including resilience of agro ecosystems Evidence is drawn from a wide range of investigations primarily from the scientific peer reviewed literature but also non journal sources The literature review has been corroborated by interviews with leading specialists in the field The report reviews the use of NDVI for a range of themes related to land degradation including land cover change drought monitoring and early warning systems desertification processes greening trends soil erosion and salinization vegetation burning and recovery after fire biodiversity loss and soil carbon This SpringerBrief also discusses the limits of the use of NDVI for land degradation assessment and potential for future directions of use A substantial body of peer reviewed research lends unequivocal support for the use of coarse resolution time series of NDVI data for studying vegetation dynamics at global continental and sub continental levels There is compelling evidence that these data are highly correlated with biophysically meaningful vegetation characteristics such as photosynthetic capacity and primary production that are closely related to land degradation and to agroecosystem resilience

Global Monitoring Report 2008 World Bank, 2008-04-14 Global Monitoring Report 2008 the fifth in an annual series is essential reading for those who wish to follow the global development agenda and debate in 2008 The year marks the midpoint toward the 2015 deadline for achieving the Millennium Development Goals MDGs It is also an important year to work toward a consensus on how the world is going to respond to the challenge of climate change building on the foundation laid at the Bali climate change conference in December 2007 The report spans this agenda It provides a comprehensive

assessment of progress toward the MDGs and related policies and actions It addresses the challenge of climate change and environmental sustainability and assesses its implications for development The report s assessment of MDGs at midpoint presents a mixed picture one of both significant progress and formidable challenges The first MDG reducing extreme poverty by half is likely to be met at the global level thanks to a remarkable surge in global economic growth over the past decade But on current trends the human development MDGs are unlikely to be met Prospects are gravest for the goals of reducing child and maternal mortality but shortfalls are also likely in the primary school completion nutrition and sanitation MDGs The potential effects of climate change compound the challenge of achieving the development goals and sustaining progress The report s messages are clear urgent action is needed to help the world get back on track to achieve the MDGs and urgent action is also needed to combat climate change that threatens the well being of all countries but particularly of poor countries and poor people The goals of development and environmental sustainability are closely related and the paths to those goals have important synergies **Toxicology and Human Environments** Ernest Hodgson,2012-09-28

Environmental toxicology is generally held to be the study of the potential of constituents of outdoor environments to impact either human health or the biological structure of the ecosystems involved This volume is a first attempt to integrate toxicological studies of all of the many human environments both indoor and outdoor and their complex interrelationships Included are considerations of natural environments the agroecosystem occupational urban and domestic environments as well as the environment associated with Superfund sites and military deployments The primary emphasis is on public health including the potential health effects of toxicants found in different environments the bioprocessing of such toxicants in humans and surrogate animals and the principles of risk analysis Approaches the toxicology of human environments in a new and unique way stressing the complex interrelationships of all human environments and the implication for human and environmental health Each chapter is written by an acknowledged expert and is addressed to those interested in the broader implications of the environmental modifications that are always associated with the activities of humans living and working in them Book Catalog of the Library and Information Services Division: Subject index Environmental Science Information

Center. Library and Information Services Division,1977 **Nature and Culture** Sarah Pilgrim,Jules N. Pretty,2010 There is a growing recognition that the diversity of life comprises both biological and cultural diversity But this division is not universal and in many cases has been deepened by the common disciplinary divide between the natural and social sciences and our apparent need to manage and control nature This book goes beyond divisive definitions and investigates the bridges linking biological and cultural diversity The international team of authors explore the common drivers of loss and argue that policy responses should target both forms of diversity in a novel integrative approach to conservation thus reducing the gap between science policy and practice While conserving nature alongside human cultures presents unique challenges this book forcefully shows that any hope for saving biological diversity is predicated on a concomitant effort to appreciate and protect
