Superconducting Materials for High Energy Colliders Luisa Cifarelli, 2001 The ELOISATRON ELN Project aims at a future proton supercollider with 100 500 TeV energy per beam and 10^{34} 10^{36} cm²s⁻¹ luminosity While the Large Hadron Collider LHC is being implemented at CERN it is very timely to study the feasibility of the next generation of hadron colliders at the extreme limits of energy and luminosity In this respect the achievement of extremely high magnetic fields and the production of accelerating rf cavities with very low losses are a crucial point in the actual construction design of such a collider The search for superconducting materials with suitable properties to be used in this field has gained a new impulse after the discovery of the so called high temperature superconducting compounds HTSCs with superconducting critical temperatures higher than 100 K Besides the critical temperatures the transport performances of this class of compounds are still very far from allowing applications in extremely high energy colliders On the other hand in the last few years the technological and scientific improvements obtained for both the HTSCs and the conventional superconducting materials are very promising This book reviews the recent status of R D on the rising generation of superconducting materials for accelerator magnets and cavities and discusses novel aspects and ideas in this domain *Post-Planck Cosmology* Cédric Deffayet, Patrick Peter, Benjamin Wandelt, Matías Zaldarriaga, Leticia F. Cugliandolo, 2015 This book gathers the lecture notes of the 100th Les Houches Summer School which was held in July 2013 These lectures represent a comprehensive pedagogical survey of the frontier of theoretical and observational cosmology just after the release of the first cosmological

results of the Planck mission The Cosmic Microwave Background is discussed as a possible window on the still unknown laws of physics at very high energy and as a backlight for studying the late time Universe Other lectures highlight connections of fundamental physics with other areas of cosmology and astrophysics the successes and fundamental puzzles of the inflationary paradigm of cosmic beginning the themes of dark energy and dark matter and the theoretical developments and observational probes that will shed light on these cosmic conundrums in the years to come **Novel ideas for accelerators, particle detection and data challenges at future colliders** Alessandro Tricoli, Patrizia Azzi, Petra Merkel, Vladimir Shiltsev, 2023-07-21 *T.D. Lee* Hai-Cang Ren, Yang Pang, 1998-07-28 This collection of papers by the renowned physicist T D Lee covers the four main areas of his work since 1985 soliton stars and black holes discrete physics condensed matter and many body systems and relativistic heavy ion collisions particle physics and field theory In addition the book contains several of Professor Lee s lectures on such topics as the evolution of physics in this century and the strong link between the sciences and the arts
