clinical cardiac electrophysiology became a recognized sub speciality of the American Board of Internal Medicine The formal

recognition of this highly specialized and technical field of medicine represents the culmination of thirty years of remarkable scientific and intellectual discovery Beginning in the 1950s cardiologists realized that cardiac arrhythmias were the cause of significant morbidity and the sudden death of at least 350 000 patients every year in the United States alone At that time the only tools available for analyzing abnormal heart rhythms were the standard EKG machine and careful deductive reasoning During the early 1960s cardiac pacemakers reflected the first foray in the electrical therapy of cardiac arrhythmias Pacemakers were first implanted in order to control syncopal episodes related to bradycardic heart rhythms Although crude and bulky devices their utility was immediately obvious to physicians and patients alike The recognition that electrical signals could be recorded from inside the heart and that the heart's rhythm could be controlled by the application of electrical energy began the era of clinical cardiac electrophysiology which was to follow In the late 1960s and early 1970s and at the peak of the Vietnam conflict a group of cardiologists with special training in cardiac electrophysiology were sequestered at the US Public Health Service Hospital at Staten Island

Practice and Progress in Cardiac Pacing and Electrophysiology Ali Oto, 2012-12-06 Developments in the electrical treatment of arrhythmias have been so fast over the last few years that access to available state of the art knowledge has become a major challenge The proceedings of scientific meetings are therefore most helpful in this regard This volume provides highlights of many of the recent and most important technological advances and concepts in cardiac electrotherapy written by the most prominent figures in the field for the internists clinical cardiologists and cardiologists who are practising in arrhythmias and antiarrhythmic therapy The book is divided into five parts each focusing on an exciting group of topics Part One is a highlight of some of the hot points in arrhythmology Part Two is a quick reference to the current concepts in non invasive electrocardiology Part Three cardiac pacing is enhanced by the introductory chapter of S Furman which gives the state of the art in electrical cardiac stimulation for 1995 This part also reviews the technical advances new perspectives in the indications of cardiac pacing as well as the management of complications Radiofrequency ablation as a challenging antiarrhythmic therapeutic strategy is thoroughly reviewed and the hottest topics are highlighted in Part Four Part Five is dedicated to implantable cardioverter defibrillators with several exciting topics including driving with implantable devices

Fundamentals of Cardiac Pacing Hilbert J.Th. Thalen, C.C. Meere, 2012-12-06 The VIth World Symposium on Cardiac Pacing in Montreal 1979 opened with a course meant to be an introduction for newcomers and an updating re fresher and link between the various fields of knowledge needed by experienced persons for cardiac pacing Invited guest lecturers were selected for their world recognized expertise in the individual subjects This book is a collection of the various presentations on historical clinical electrophysiological and technical aspects of cardiac pacing Together they cover the fundamentals of cardiac stimulation We hope that this book may become an introductory guide to the field of cardiac pacing and that it may contribute to a better understanding of the pacemaker system and a better treatment of the pacemaker patient Claude C Meere Hilbert J Th Thalen

How to face 'the faces' of CARDIAC PACING Erik Andries, Pedro Brugada, Roland Stroobandt, 2013-11-11. How to face the faces of cardiac pacing represents an editor's compiled selection of lectures on cardiac pacing and electrophysiology. Electrical stimulation of the heart is an ever changing and at times explosive field. The number of implanting centres is growing tremendously and pacing is not exclusively confined to arrhythmologists. Therefore the editors attempted to organize a course being both practical in daily clinical management and instructive in understanding technical concepts. The glossary of terms have to be clearly understood before one is able to interpret the complex electrocardiograms of DDD and especially DDDR pacemakers. Those electrocardiograms have to be approached in a systematic way using a step by step analysis. The main clinical symptom requiring pacemaker implantation is syncope. It cannot be over emphasized that syncope is a clinical diagnosis merely based on history and physical examination. The organization of a pacemaker follow up clinic depends on local facilities and needs. The effectiveness of pacing controls markedly increases when using a systematic approach. Repeated optimal adjustment of programmable functions is part of the control. Antiarrhythmic drugs are losing popularity in the treatment of

tachy arrhythmias Nonpharmacologic treatment antitachypacing implantable defibrillators and antiarrhythmic surgery at the present time have definite indications probably expanding in the future When complexity in electronic devices increases repercussions on expenses either by the government or social and private insurances needs consideration
