The Craft Of Prolog Logic Programming:

   The Craft of Prolog Richard O'Keefe,2009-12-07 The emphasis in The Craft of Prolog is on using Prolog effectively It presents a loose collection of topics that build on and elaborate concepts learned in a first course Hacking your program is no substitute for understanding your problem Prolog is different but not that different Elegance is not optional These are the themes that unify Richard O Keefe s very personal statement on how Prolog programs should be written The emphasis in The Craft of Prolog is on using Prolog effectively It presents a loose collection of topics that build on and elaborate concepts learned in a first course These may be read in any order following the first chapter Basic Topics in Prolog which provides a basis for the rest of the material in the book Richard A O Keefe is Lecturer in the Department of Computer Science at the Royal Melbourne Institute of Technology He is also a consultant to Quintus Computer Systems Inc Contents Basic Topics in Prolog Searching Where Does the Space Go Methods of Programming Data Structure Design Sequences Writing Interpreters Some Notes on Grammar Rules Prolog Macros Writing Tokenisers in Prolog All Solutions   *The Craft of Prolog* Richard A. Shapiro,1994 This second edition contains revised chapters taking into account recent research advances More advanced exercises have been included and Part II The Prolog Language has been modified to be compatible with the new Prolog standard This is a graduate level text that can be used for self study   *The Art of Prolog* Leon Sterling,1986   *Logic Programming* Lee Naish,1997 Covers the latest research in areas such as theoretical foundations constraints concurrency and parallelism deductive databases language design and implementation non monotonic reasoning and logicprogramming and the Internet 8 12 July 1997 Leuven Belgium The International Conference on Logic Programming is the main annual conference sponsored by the Association for Logic Programming It covers the latest research in areas such as theoretical foundations constraints concurrency and parallelism deductive databases language design and implementation non monotonic reasoning and logic programming and the Internet   <u>Computational Logic: Logic Programming and Beyond</u> A.C. Kakas,F. Sadri,2003-08-02 Alan Robinson This set of essays pays tribute to Bob Kowalski on his 60th birthday an anniversary which gives his friends and colleagues an excuse to celebrate his career as an original thinker a charismatic communicator and a forceful intellectual leader The logic programming community hereby and herein conveys its respect and thanks to him for his pivotal role in creating and fostering the conceptual paradigm which is its raison d tre The diversity of interests covered here reflects the variety of Bob s concerns Read on It is an intellectual feast Before you begin permit me to send him a brief personal but public message Bob how right you were and how wrong I was I should explain When Bob arrived in Edinburgh in 1967 resolution was as yet fairly new having taken several years to become at all widely known Research groups to investigate various aspects of resolution sprang up at several institutions the one organized by Bernard Meltzer at Edinburgh

University being among the first For the half dozen years that Bob was a leading member of Bernard s group I was a frequent visitor to it and I saw a lot of him We had many discussions about logic computation and language **Logic Program Synthesis and Transformation** Timothy P. Clement,Kung-Kiu Lau,2013-04-17 Logic programming synthesis and transformation are methods of deriving logic programs from their specifications and where necessary producing alternative but equivalent forms of a given program The techniques involved in synthesis and transformation are extremely important as they allow the systematic construction of correct and efficient programs and have the potential to enhance current methods of software production Transformation strategies are also being widely used in the field of logic program development LOPSTR 91 was the first workshop to deal exclusively with both logic program synthesis and transformation and as such filled an obvious gap in the existing range of logic programming workshops In attempting to cover the subject as comprehensively as possible the workshop brought together researchers with an interest in all aspects of logic including Horn Clause and first order logic and all approaches to program synthesis and transformation Logic Program Synthesis and Transformation provides a complete record of the workshop with all the papers reproduced either in full or as extended abstracts They cover a wide range of aspects both practical and theoretical including the use of mode input output in program transformation program specification and synthesis in constructive formal systems and a case study in formal program development in modular Prolog This volume provides a comprehensive overview of current research and will be invaluable to researchers and postgraduate students who wish to enhance their understanding of logic programming techniques The Practice of Prolog Leon Sterling,1990 Addressed to readers at different levels of programming expertise The Practice ofProlog offers a departure from current books that focus on small programming examples requiringadditional instruction in order to extend them to full programming projects It shows how to designand organize moderate to large Prolog programs providing a collection of eight programmingprojects each with a particular application and illustrating how a Prolog program was written tosolve the application These range from a simple learning program to designing a database formolecular biology to natural language generation from plans and stream data analysis Leon Sterlingis Associate Professor in the Department of Computer Engineering and Science at Case Western ReserveUniversity He is the coauthor along with Ehud Shapiro of The Art of Prolog Contents A SimpleLearning Program Richard O Keefe Designing a Prolog Database for Molecular Biology Ewing Lusk Robert Olson Ross Overbeek Steve Tuecke Parallelizing a Pascal Compiler Eran Gabber PREDITOR AProlog Based VLSI Editor Peter B Reintjes Assisting Register Transfer Level Hardware Design PaulDrongowski Design and Implementation of aPartial Evaluation System Arun Lakhotia Leon Sterling Natural Language Generation from Plans Chris Mellish Stream Data Analysis in Prolog Stott Parker *Logic for Applications* Anil Nerode,Richard A. Shore,2012-12-06 In writing this book our goal was to produce a text suitable for a first course in mathematical logic more attuned than the traditional textbooks to the re cent dramatic growth in the applications oflogic to computer science Thus

our choice oftopics has been heavily influenced by such applications Of course we cover the basic traditional topics syntax semantics soundnes5 completeness and compactness as well as a few more advanced results such as the theorems of Skolem Lowenheim and Herbrand Much ofour book however deals with other less traditional topics Resolution theorem proving plays a major role in our treatment of logic especially in its application to Logic Programming and PRO LOG We deal extensively with the mathematical foundations ofall three ofthese subjects In addition we include two chapters on nonclassical logics modal and intuitionistic that are becoming increasingly important in computer sci ence We develop the basic material on the syntax and semantics via Kripke frames for each of these logics In both cases our approach to formal proofs soundness and completeness uses modifications of the same tableau method in troduced for classical logic We indicate how it can easily be adapted to various other special types of modal logics A number of more advanced topics includ ing nonmonotonic logic are also briefly introduced both in the nonclassical logic chapters and in the material on Logic Programming and PROLOG **Principles and Practice of Declarative Programming** Gopalan Nadathur,2006-12-29 This book constitutes the refereed proceedings of the International Conference on Principles and Practice of Declarative Programming PPDP 99 held in Paris France in September October 1999 The 22 revised full papers presented together with three invited contributions were carefully reviewed and selected from a total of 52 full length papers submitted Among the topics covered are type theory logics and logical methods in understanding defining integrating and extending programming paradigms such as functional logic object oriented constraint and concurrent programming support for modularity the use of logics in the design of program development tools and development and implementation methods Foundations of Deductive Databases and Logic Programming Jack Minker,2014-05-12 Foundations of Deductive Databases and Logic Programming focuses on the foundational issues concerning deductive databases and logic programming The selection first elaborates on negation in logic programming and towards a theory of declarative knowledge Discussions focus on model theory of stratified programs fixed point theory of nonmonotonic operators stratified programs semantics for negation in terms of special classes of models relation between closed world assumption and the completed database negation as a failure and closed world assumption The book then takes a look at negation as failure using tight derivations for general logic programs declarative semantics of logic programs with negation and declarative semantics of deductive databases and logic programs The publication tackles converting AND control to OR control by program transformation optimizing dialog equivalences of logic programs unification and logic programming and parallel complexity Topics include parallelism and structured and unstructured data parallel algorithms and complexity solving equations most general unifiers systems of equations and inequations equivalences of logic programs and optimizing recursive programs The selection is a valuable source of data for researchers interested in pursuing further studies on the foundations of deductive databases and logic programming Logic Programming David S. Warren,1993 The Tenth International Conference on Logic Programming

sponsored by the Association for Logic Programming is a major forum for presentations of research applications and implementations in this important area of computer science Logic programming is one of the most promising steps toward declarative programming and forms the theoretical basis of the programming language Prolog and it svarious extensions Logic programming is also fundamental to work in artificial intelligence where it has been used for nonmonotonic and commonsense reasoning expert systems implementation deductive databases and applications such as computer aided manufacturing David S Warren is Professor of Computer Science at the State University of New York Stony Brook Topics covered Theory and Foundations Programming Methodologies and Tools Meta and Higher order Programming Parallelism Concurrency Deductive Databases Implementations and Architectures Applications Artificial Intelligence Constraints Partial Deduction Bottom Up Evaluation Compilation Techniques **Foundations of Disjunctive Logic Programming** Jorge Lobo,Jack Minker,Arcot Rajasekar,1992 **Logic for Programming, Artificial Intelligence, and Reasoning** Robert Nieuwenhuis,Andrei Voronkov,2003-06-30 This volume contains the papers presented at the Eighth International C ference on Logic for Programming Arti cial Intelligence and Reasoning LPAR 2001 held on December 3 7 2001 at the University of Havana Cuba together with the Second International Workshop on Implementation of Logics There were 112 submissions of which 19 belonged to the special subm sion category of experimental papers intended to describe implementations or comparisons of systems or experiments with systems Each submission was viewed by at least three program committee members and an electronic program committee meeting was held via the Internet The high number of submissions caused a large amount of work and we are very grateful to the other 31 PC members for their e ciency and for the quality of their reviews and discussions Finally the committee decided to accept 40papers in the theoretical ca gory and 9 experimental papers In addition to the refereed papers this volume contains an extended abstract of the invited talk by Frank Wolter Two other invited lectures were given by Matthias Baaz and Manuel Hermenegildo Apart from the program committee we would also like to thank the other people who made LPAR 2001 possible the additional referees the Local Arran gements Chair Luciano Garc a Andr es Navarro and Oscar Guell who ran the internet based submission software and the program committee discussion so ware at the LSI Department lab in Barcelona and Bill McCune whose program committee management software was used Programming Language Implementation and Logic Programming Jaan Penjam,1994-08-24 This volume constitutes the proceedings of the 6th International Symposium on Programming Language Implementation and Logic Programming PLILP 94 held in Madrid Spain in September 1994 The volume contains 27 full research papers selected from 67 submissions as well as abstracts of full versions of 3 invited talks by renowned researchers and abstracts of 11 system demonstrations and poster presentations Among the topics covered are parallelism and concurrency implementation techniques partial evaluation synthesis and language issues constraint programming meta programming and program transformation functional logic programming and program analysis and abstract interpretation

Computing Handbook, Third Edition Teofilo Gonzalez,Jorge Diaz-Herrera,Allen Tucker,2014-05-07 Computing Handbook Third Edition Computer Science and Software Engineering mirrors the modern taxonomy of computer science and software engineering as described by the Association for Computing Machinery ACM and the IEEE Computer Society IEEE CS Written by established leading experts and influential young researchers the first volume of this popular handbook examines the elements involved in designing and implementing software new areas in which computers are being used and ways to solve computing problems The book also explores our current understanding of software engineering and its effect on the practice of software development and the education of software professionals Like the second volume this first volume describes what occurs in research laboratories educational institutions and public and private organizations to advance the effective development and use of computers and computing in today s world Research level survey articles provide deep insights into the computing discipline enabling readers to understand the principles and practices that drive computing education research and development in the twenty first century **Programming Languages and Systems** Pierpaolo Degano,2003-03-14 Comparison is a powerful cognitive research tool in science since it does across studies to evaluate similarities and differences e g across taxa or diseases This book deals with comparative research on plant disease epidemics Comparisons are done in specifically designed experiments or with posterior analyses From the apparently unlimited diversity of epidemics of hundreds of diseases comparative epidemiology may eventually extract a number of basic types These findings are very important to crop protection Plant disease epidemiology being the ecological branch of plant pathology may also be of value to ecologists but also epidemiologists in the areas of animal or human diseases may find interesting results applicable to their areas of research **Computer Science Handbook** Allen B. Tucker,2004-06-28 When you think about how far and fast computer science has progressed in recent years it s not hard to conclude that a seven year old handbook may fall a little short of the kind of reference today s computer scientists software engineers and IT professionals need With a broadened scope more emphasis on applied computing and more than 70 chap **Static Analysis** Patrick Cousot,2003-05-15 This book constitutes the refereed proceedings of the 8th International Symposium on Static Analysis SAS 2001 held in Paris France in July 2001 The 21 revised full papers presented together with 2 invited papers were carefully reviewed and selected from 62 submissions also included are 5 abstracts of an invited session on security The papers are organized in topical sections on program transformation strictness and termination semantics abstraction logic and constraint programming data structures pointer analysis model checking and abstract model checking *Novice Programming Environments* Marc Eisenstadt,Mark Keane,Tim Rajan,2018-05-15 This book originally published in 1992 encapsulates ten years of research at the Open University s Human Cognition Research Laboratory The research investigates the problems of novice programmers and is strongly oriented toward the design and implementation of programming environments aimed at eliminating or easing novices problems A range of languages is studied Pascal SOLO Lisp Prolog and

Knowledge Engineering Programming The primary emphasis of the empirical studies is to gain some understanding of novices mental models of the inner workings of computers Such erroneous models are constructed by novices in their own heads to account for the idiosyncrasies of particular programming languages The primary emphasis of the implementations described in the book is the provision of automatic debugging aids i e artificial intelligence programs which can analyse novices buggy programs and make sense of them thereby providing useful advice for the novices Another related strand taken in some of the work is the concept of pre emptive design i e the provision of tools such as syntax directed editors and graphical tracers which help programmers avoid many frequently occurring errors A common thread throughout the book is its Cognitive Science Artificial Intelligence orientation AI tools are used for instance to construct simulation models of subjects writing programs in order to provide insights into what their deep conceptual errors are At the other extreme AI programs which were developed in order to help student debug their programs are observed empirically in order to ensure that they provide facilities actually needed by real programmers This book will be of great interest to advanced undergraduate postgraduate and professional researchers in Cognitive Science Artificial Intelligence and Human Computer Interaction
