Evans, 2017-03-02 Curiosity and wonder are topics of increasing interest and importance to Renaissance and Enlightenment historians Conspicuous in a host of disciplines from history of science and technology to history of art literature and society both have assumed a prominent place in studies of the Early Modern period This volume brings together an international group of scholars to investigate the various manifestations of and relationships between curiosity and wonder from the 16th to the 18th centuries Focused case studies on texts objects and individuals explore the multifaceted natures of these themes highlighting the intense fascination and continuing scrutiny to which each has been subjected over three centuries From instances of curiosity in New World exploration to the natural wonders of 18th century Italy Curiosity and Wonder from the Renaissance to the Enlightenment locates its subjects in a broad geographical and disciplinary terrain Taken together the essays presented here construct a detailed picture of two complex themes demonstrating the extent to which both have been transformed and reconstituted often with dramatic results Devices of Curiosity Oliver Gaycken, 2015 Devices of Curiosity excavates a largely unknown genre of early cinema the popular science film Primarily a work of cinema history it also draws on the insights of the history of science Beginning around 1903 a variety of producers made films about scientific topics for general audiences inspired by a vision of cinema as an educational medium This book traces the development of popular science films over the first half of the silent era from its beginnings in England to its flourishing in France around 1910 Devices of Curiosity also considers how popular science films exemplify the circulation of knowledge These films initially relied upon previous traditions such as the magic lantern lecture for their representational strategies and they continually had recourse to established visual iconography but they also created novel visual paradigms and led to the creation of ambitious new film collections Finally the book discerns a transit between nonfictional and fictional modes seeing affinities between popular science films and certain aspects of fiction films

particularly Louis Feuillade's crime melodramas This kind of circulation is important for an understanding of the wider relevance of early popular science films which impacted the formation of the documentary educational and avant garde cinemas
