Friedman, 2010-09-02 This book presents a provocative debate between parapsychological advocates who

claim that Western science's worldview is incomplete and counteradvocates who insist that parapsychological data is either spurious or can be explained by standard scientific principles. Despite ongoing and repeated attempts to prove or disprove the existence of parapsychological events, there are still no conclusive findings and certainly no consensus across the worldwide community of scholars, scientists, and proponents of psychic phenomena. Still, there is no shortage of information about this fascinating topic to allow everyone to draw their own conclusions. This book has been expressly written to make each chapter and topic accessible to a general audience despite containing a vast amount of theoretical material. The book is organized into two parts: in the first section, proponents of the validity of parapsychological data and critics who reject that validity state their respective positions. In the second part, each group responds to each other's statements in the form of a debate. Other experts from the United States as well as from Australia and Great Britain provide overviews and conclusions.

Process, Action, and Experience Rowland Stout, 2018-02-23 There has been a philosophical upheaval recently in our understanding of the metaphysics of the mind. The philosophy of mind and action has traditionally treated its subject matter as consisting of states and events and completely ignored the category of ongoing process. So the mental things that happen, experiences and actions, have been taken to be completed events and not ongoing processes. But events, by their very nature as completed wholes, are never present to the agent or subject; only ongoing processes can be present to a subject in the way required for conscious experience and practical self-knowledge. This suggests that a proper understanding of processes is required to understand subjective experience and agency. This volume explores the possibility and advantages of taking processes to be the subject matter of the philosophy of mind and action. The central defining feature of the process argument is its use of the progressive as opposed to the perfective aspect. But beyond this, philosophers working on the metaphysics of processes do not agree. The contributors to this volume take up this argument in the metaphysics of processes: Are processes continuants? Are they particulars at all, or should we rather be thinking of process activity as a kind of stuff? Process, Action, and Experience considers whether practical reasoning and practical self-knowledge require thinking of action in process terms and it considers arguments for the processive nature of conscious experience.

In this Beginner's Guide, renowned author and scientist Dr Caroline Watt explores the evidence behind such phenomena. In the last one hundred years, parapsychologists have tried to determine whether it is possible to examine paranormal activity using scientific methods. Packed full of interesting characters, surprising incidents, and novel experiments, this book takes the reader on a journey through this fascinating research. Parapsychology: A Beginner's Guide traces the history and evolution of parapsychology as a science and provides a thorough and critical analysis of the research and evidence in the field today.

Gabriela Goldstein, 2025-10-27 This book explores the concept of estrangement from a psychoanalytic perspective intertwining art and aesthetics to offer a paradigm of the aesthetic experience Gabriela Goldstein suggests that an unexpected encounter with a work of art may lead to a state of poetic estrangement promoting a possible reorganization of its subject's psychic economy The conceptual work is illuminated with vignettes exploring the experience of this state of estrangement reflecting on the encounter between the subject and the other Other between analyst and patient and in the framework provided by the analytical situation Finally Goldstein considers how the metapsychology of aesthetic experience and its research contribute to clinical understanding of processes of deficient symbolization Art and Psychoanalysis will be key reading for psychoanalysts artists researchers and teachers of art and psychoanalysis It will also be of great interest to art therapists students of art and the humanities as well as other readers interested in an in depth understanding of the aesthetic experience and creative processes **A Companion to Simone de Beauvoir** Laura Hengehold, Nancy
