Smith, Karlson Hargroves, Cheryl Desha, 2010 *Cents and Sustainability* is a clear sighted response to the 1987 call by Dr Gro Brundtland in *Our Common Future* to achieve a new era of economic growth that is forceful and at the same time socially and environmentally sustainable The Brundtland Report argued that not only was it achievable but that it was an urgent imperative in order to

achieve a transition to sustainable development while significantly reducing poverty and driving clean and green investment. With some still arguing for significantly slowing economic growth in order to reduce pressures on the environment, this new book *Cents and Sustainability* shows that it is possible to reconcile the need for economic growth and environmental sustainability through a strategy to decouple economic growth from environmental pressures combined with a renewed commitment to achieve significant environmental restoration and poverty reduction. Beginning with a brief overview of some of the most pressing environmental challenges of our time, the book then explains decoupling theory, overviews a number of factors that can undermine and even block efforts to decouple in both developed and developing countries, and then discusses a number of key considerations to assist the development of national decoupling strategies. The book then focuses on presenting evidence to support greater action, not just on climate change but also on decoupling economic growth from the loss of biodiversity and the deterioration of natural systems, freshwater extraction, waste production, and air pollution. In the lead up to the 2012 United Nations Earth Summit and beyond, *Cents and Sustainability* will be a crucial guide to inform and assist nations to develop strategies to significantly reduce environmental pressures, strengthen their economy, create jobs, and reduce poverty. I commend the team from The Natural Edge Project and their partners for undertaking to develop a response to Our Common Future to mark its 20th anniversary. Technology and Society, second edition Deborah G. Johnson, Jameson M. Wetmore, 2021-08-24. Writings by thinkers ranging from Rokeya Sakhawat Hossain to Bruno Latour that focus on the interconnections of technology, society, and values. Technological change does not happen in a vacuum; decisions about which technologies to develop, fund, market, and use engage ideas about values as well as calculations of costs and benefits. In order to influence the development of technology for the better, we must first understand how technology and society are inextricably bound together. These writings by thinkers ranging from Bruno Latour to Francis Fukuyama help us do just that: examining how people shape technology and how technology shapes people. This second edition updates the original significantly, offering twenty-one new essays along with fifteen from the first edition. The book first presents visions of the future that range from technological utopias to cautionary tales and then introduces several major STS theories. It examines human and social values and how they are embedded in technological choices and explores the interesting and subtle complexities of the technology-society relationship. Remedying a gap in earlier theorizing in the field, many of the texts illustrate how race and gender are intertwined with technology. Finally, the book offers a set of readings that focus on the sociotechnical challenges we face today, treating topics that include cybersecurity, geoengineering, and the myth of neutral technology. **Natural Capitalism** Paul Hawken, Amory Lovins, L. Visiting Fellow and Senior Economist American Council for an Energy Efficient Economy **Sustainable Fossil Fuels**

Mark Jaccard, 2006-01-16 More and more people believe we must quickly wean ourselves from fossil fuels oil natural gas and coal to save the planet from environmental catastrophe wars and economic collapse In this 2006 book Professor Jaccard argues that this view is misguided We have the technological capability to use fossil fuels without emitting climate threatening greenhouse gases or other pollutants The transition from conventional oil and gas to their unconventional sources including coal for producing electricity hydrogen and cleaner burning fuels will decrease energy dependence on politically unstable regions In addition our vast fossil fuel resources will be the cheapest source of clean energy for the next century and perhaps longer which is critical for the economic and social development of the world's poorer countries By buying time for increasing energy efficiency developing renewable energy technologies and making nuclear power more attractive fossil fuels will play a key role in humanity's quest for a sustainable energy system Solar Revolution

Travis Bradford, 2008-09-26 An innovative analysis that shows how the shift to solar energy in particular the use of photovoltaic cells is both economically advantageous and inevitable and will rival the information and communication technologies revolution in its transformative effects In Solar Revolution fund manager and former corporate buyout specialist Travis Bradford argues on the basis of standard business and economic forecasting models that over the next two decades solar energy will increasingly become the best and cheapest choice for most electricity and energy applications Solar Revolution outlines the path by which the transition to solar technology and sustainable energy practices will occur Developments in the photovoltaic PV industry over the last ten years have made direct electricity generation from PV cells a cost effective and feasible energy solution despite the common view that PV technology appeals only to a premium niche market Bradford shows that PV electricity today has become the choice of hundreds of thousands of mainstream homeowners and businesses in many markets worldwide including Japan Germany and the American Southwest Solar energy will eventually be the cheapest source of energy in nearly all markets and locations because PV can bypass the aging and fragile electricity grid and deliver its power directly to the end user fundamentally changing the underlying economics of energy As the scale of PV production increases and costs continue to decline at historic rates demand for PV electricity will outpace supply of systems for years to come Ultimately the shift from fossil fuels to solar energy will take place not because solar energy is better for the environment or energy security or because of future government subsidies or as yet undeveloped technology The solar revolution is already occurring through decisions made by self-interested energy users The shift to solar energy is inevitable and will be as transformative as the last century's revolutions in information and communication technologies **Issues**

Power to the People Vijay V. Vaitheeswaran, 2025-09-23 A guided tour of a revolution in the making that promises to change our lives. Global warming, rolling black outs, massive tanker spills, oil dependence, our profligate ways have doomed us to suffer such tragedies right. Perhaps, but Vijay Vaitheeswaran, the energy and environment correspondent for *The Economist*, sees great opportunity in the energy realm today and *Power to the People* is his fiercely independent and irresistibly entertaining look at the economic, political, and technological forces that are reshaping the world's management of energy resources. In it, he documents an energy revolution already underway, a revolution as radical as the communications revolution of the past decades. From the corporate boardroom of a Texas oil titan who denies the reality of global warming to a think tank nestled in the Rocky Mountains where a visionary named Amory Lovins is developing the kind of hydrogen fuel cell technology that could make the internal combustion engine obsolete, Vaitheeswaran gamely pursues the people who hold the keys to our future. Man's quest for energy is insatiable. It is also essential. By avoiding the traditional binaries that pit free markets against the wisdom of conservation and the need for clean energy, *Power to the People* is a book that debunks myths without debunking hope.

Przedsiębiorstwa biogazowe w rozwoju lokalnym w świetle koncepcji zakorzenienia JUSTYNA CHODKOWSKA-MISZCZUK, 2019 Powstawanie nowych przedsiębiorstw energetycznych na obszarach wiejskich z jednej strony stanowi wyzwanie, z drugiej zaś stwarza szansę rozwoju. Przejście od scentralizowanej energetyki konwencjonalnej w kierunku zdecentralizowanej energetyki odnawialnej wykorzystującej zasoby lokalne to proces wielopłaszczyznowy, dotyczy nie tylko zmian technologicznych, ale wymaga przede wszystkim przeobrażeń społecznych i przestrzennych. Przekształcenia w sektorze energetycznym kreślą te perspektywy indukowania nowych bodźców w rozwoju społeczno-gospodarczego danego obszaru i mobilizacji potencjału lokalnego. Działania w lokalnych układach budują się powoli, zakorzeniając się. Przedsiębiorstwa energetyczne stwarzają możliwości uruchomienia się napędowych lokalnych gospodarek. Tworzone relacje i pogłębiana współpraca to także doskonała platforma aszczyzna popularyzowania działań edukacyjnych w zakresie postaw i zachowań charakterystycznych dla społeczeństwa niskoemisyjnego. Formułowanie założeń skutecznych polityk lokalnych szczególnie w zakresie upowszechnienia się gospodarki niskoemisyjnej musi uwzględniać zidentyfikowane procesy odnoszące się do rangi powołania nowych podmiotów energetycznych a lokalnym otoczeniem.
