Lapointe, 2008 Cigarette smoking during childhood and adolescence produces significant health problems among young people including cough and phlegm production an increase in the number and severity of respiratory illnesses decreased physical fitness an unfavourable lipid profile and potential retardation in the rate of lung growth and the level of maximum lung function in addition to leading to long term smoking and the numerous diseases connected with that including cancer and others In this new book adolescent smoking is researched pertaining to the health complications that young adults will endure as well as the different social aspects of what causes an adolescent to begin smoking in the first place including peer pressure Several methods of smoking cessation are discussed Smoking in Adolescence Barbara B. Moss, 1992 How to Help Your Teenager Stop Smoking Michael Mannion, 2000 Draws on smoking cessation research to explain how parents can help teenagers quit smoking while providing the emotional support they need to be successful in their efforts **The Oxford Handbook of Adolescent Substance Abuse** Robert A. Zucker, Sandra A. Brown, 2019-08-01 Adolescent substance abuse is the nation s 1 public health problem It originates out of a developmental era where experimentation with the world is increasingly taking place and where major changes in physical self and social relationships are taking place These changes cannot be understood by any one discipline nor can they be described by focusing only on the behavioral and social problems of this age period the characteristics of normal development or the pharmacology and addictive potential of specific drugs

They require knowledge of the brain's systems of reward and control, genetics, psychopharmacology, personality, child development, psychopathology, family dynamics, peer group relationships, culture, social policy, and more. Drawing on the expertise of the leading researchers in this field, this Handbook provides the most comprehensive summarization of current knowledge about adolescent substance abuse. The Handbook is organized into eight sections covering the literature on the developmental context of this life period, the epidemiology of adolescent use and abuse, similarities and differences in use, addictive potential and consequences of use for different drugs, etiology and course as characterized at different levels of mechanistic analysis ranging from the genetic and neural to the behavioural and social. Two sections cover the clinical ramifications of abuse and prevention and intervention strategies to most effectively deal with these problems. The Handbook's last section addresses the role of social policy in framing the problem in addressing it and explores its potential role in alleviating it.

Handbook of Adolescent Health Psychology William T. O'Donohue, Lorraine T. Benuto, Lauren Woodward Tolle, 2014-07-08

Adolescence is a pivotal period of development with respect to health and illness. It is during adolescence that many positive health behaviors are consolidated and important health risk behaviors are first evident; thus, adolescence is a logical time period for primary prevention. In addition, the predominant causes of morbidity and mortality in adolescence are quite different from those of adults, indicating that early identification and treatment of adolescent health problems must be directed to a unique set of targets in this age group. Moreover, because of the particular developmental issues that characterize adolescence, intervention efforts designed for adults are often inappropriate or ineffective in an adolescent population. Even when chronic illnesses are congenital or begin in childhood, the manner in which the transition from childhood to adolescence to young adulthood is negotiated has important implications for disease outcomes throughout the remainder of the person's life span.

Organized in five major sections: General Issues, Developmental Issues, Treatment and Training, Mental Health, and Physical Health, and 44 chapters, *Handbook of Adolescent Health Psychology* addresses the common and not so common health issues that tend to affect adolescents. Coverage includes Context and perspectives in adolescent health psychology; Health literacy, health maintenance, and disease prevention in adolescence; Physical disorders such as asthma, obesity, physical injury, and chronic pain; Psychological disorders such as substance abuse, attention deficit hyperactivity disorder, depression, and eating disorders; Congenital chronic diseases such as type 1 diabetes and spina bifida. *Handbook of Adolescent Health Psychology* is the definitive reference for pediatricians, family physicians, health psychologists, clinical social workers, rehabilitation specialists, and all practitioners and researchers working with adolescents.
