Taming the Tiger Leon S. Levy, 2012-12-06 A small program is presented to motivate the concerns for programmer productivity and program quality that are the central issues of this set of essays The example is one which demonstrates the performance aspect of programming In order to achieve program quality where a program is understood and known to be correct we need a primary program description This primary program description not only describes the program but is also used to generate the program The method of applying primary program descriptions to produce programs is called metaprogramming and is described in Chapter 3 In the later chapters we show how the method can be analyzed from an economic point of view to address the issues of productivity as well 1 Introduction In thinking about programming over the last decade I have concluded that very little is known about the process of programming or the engineering of software 1 The consequence of having very little established truth to use as a basis for thinking about programming is that almost every conclusion must be reasoned out from first principles Also you cannot rely solely on textbooks but must use experimentation and direct observation to gain some experience with which to proceed *The Economics of Information Systems and Software* Richard Veryard, 2014-05-15 The Economics of Information Systems and Software focuses on the economic aspects of information systems and software including advertising evaluation of information systems and software maintenance The book first elaborates on value and values software business and scientific information as an economic category Discussions focus on information products and information services special economic properties of information culture and convergence hardware and software products materiality and consumption technological progress and software flexibility The text then takes a look at advertising to finance software perspectives on East West relations in economics and information and evaluation of information systems Topics include research on information systems knowledge on Eastern European information services GDR information institutes local databases GDR databases CMEA directions and theoretical propositions The manuscript reviews software reuse software methodology in the harsh light of economics quantitative aspects of software maintenance management and calibrating a software cost estimation model Concerns cover the need for calibration measuring maintainability prognosis of maintenance effort object oriented programming metaprogramming and software quality and reuse The text is a dependable reference for computer science experts and researchers wanting to explore further the economics of information systems and software **Encyclopedia of Software Engineering Three-Volume Set (Print)** Phillip A. C: A Software Engineering Approach Peter A. Darnell, Philip E. Margolis, 2012-12-06 This book describes the C programming language and software engineering principles of program construction The book is intended primarily as a textbook for beginning and intermediate C programmers It does not assume previous knowledge of C nor of any high level language though it does assume that the reader has some familiarity with computers While not essential knowledge of another programming language will certainly help in mastering C Although the subject matter of this book is the C language the emphasis is on software engineering making programs readable maintainable portable and efficient One of our main goals is to impress upon readers that there is a huge difference between programs that merely work and programs that are well engineered just as there is a huge difference between a log thrown over a river and a well engineered bridge The book is organized linearly so that each chapter builds on information provided in the previous chapters Consequently the book will be most effective if chapters are read sequentially Readers with some experience in C however may find it more useful to consult the table of contents and index to find sections of particular interest
