here is distinctly different from that in most of the existing textbooks on international economics. Instead of model specific discussions of the basic issues it discusses the basic principles governing trade gains from trade and characteristics of international equilibrium in the context of a general trading environment of open economies. Subsequently specific models of trade are introduced as alternative theoretical explanations for the basic principles of trade. In the second part a wide range of policy issues are analysed including unilateral trade restrictions and promotions, reciprocity, trade policy choices through regionalism, product standards that regulate trade between developed and developing countries and implications of capital inflow, FDI, fragmentation and global value chains. In the third part the book discusses different currency and exchange rate regimes and their implications for a country's balance of payments and foreign exchange reserves. Drawing upon the basic theories it studies expenditure reducing and expenditure switching policies to correct for BoP imbalances under a pegged exchange rate regime. Finally some reflections on the choice of exchange rate regime and optimum currency area wind up discussions of monetary issues in international economics.
