The Matrix Explained
Maxime Drouin,2019-01-03 It s amazing how dominant information is in the modern world In fact it s so dominant that it begs the question What if information does not only define and shape our world what if it is in fact reality The 1999 film The Matrix and its sequels were predicated on just this idea Of late the sultans of Silicon Valley have become obsessed with this idea which is known as the simulation hypothesis Elon Musk himself has remarked There s a billion to one chance we re living in base reality Perhaps information doesn t just define and shape our reality Perhaps it s entangled in the fabric of reality through the mind of the observer Consider the philosophical thought experiment if a tree falls in the forest and no one is there to hear it does it make a sound It takes a mind to experience reality In this book I chronicle the journey that led me to discover the missing link between science and spirituality the information bit Legendary theoretical physicist John Wheeler s it from bit theory and my own Quantum Mind model are ultimately rooted in the same thing data Wheeler suggested that the reality of physics the it is based on patterns of information or bits I theorize that our actions in the real world unfold in sync with the underlying information thought blueprints that exist in our mind Buddha once said The mind is everything What you think you become This bi directional dialogue across the mind body connection may well occur at the Planck scale where the transition between quantum physics the bit and classical physics the it operates But where do the mind and body meet Purpose which emerges from knowing oneself unifies the wisdom of the East with the pragmatism of the West The energy derived from what has meaning to the self is the fuel that allows individuals to manifest in the physical reality via the

body the bit arrangement contained in the micro realm of their mind If its point of origin is love this route leads to inner peace and harmony and draws a vector unifying the mind heart and body *What About Us?* Edgar D. Johnson,2010-12-01

Over the past three decades the standards based reform movement has transformed K 12 education in the United States culminating with passage of the No Child Left Behind Act in 2002 Beyond making reasonable accommodations for special needs students standards based education pays little attention to other areas of student difference relying instead on a rational actor model of student experience and ignoring how differences in students backgrounds and orientations impact their particular experiences of schooling This book examines the development of standards based education with particular scrutiny of the roles of the National Governors Association and its National Education Summit events Examination of important documents emerging from those events provides an illustration of the conceptually impoverished understanding of student subjectivity motivation and agency inherent in standards based education In order to understand both problems with and alternatives to standards based education the author examines the roles of ideology rhetoric and audience in school policy In three case studies the author analyzes several non school models of education including Marine Corps bootcamp Ving Tsun kung fu training and an online school resistance community Johnson argues that examination of these learning contexts provides a better understanding of the shortcomings and dangers of the standards based model of student subjectivity and suggests a set of fourteen principles to inform the development of more student centered alternatives
