Outlines the scientific basis and experimental methods for a broad sample of surface analysis techniques drawing heavily from established principles of physical and analytical chemistry Sketches a simple low cost method of tracking particles in three dimensions **International Pulp and Paper Directory**, 1999 **Atmospheric Pressure Plasma Treatment of Polymers** Michael Thomas, K. L. Mittal, 2013-06-19 An indispensable volume detailing the current and potential applications of atmospheric pressure plasma treatment by experts practicing in fields around the world Polymers are used in a wide variety of industries to fabricate legions of products because of their many desirable traits However polymers in general and polyolefins in particular are innately not very adhesionable because of the absence of polar or reactive groups on their surfaces and concomitant low surface energy Surface treatment of polymers however is essential to impart reactive chemical groups on their surfaces to enhance their adhesion characteristic Proper surface treatment can endow polymers with improved adhesion without affecting the bulk properties A plethora of techniques ranging from wet to dry simple to sophisticated vacuum to non vacuum for polymer surface modification have been documented in the literature but the Atmospheric Pressure Plasma APP treatment has attracted much attention because it offers many advantages vis a vis other techniques namely uniform treatment continuous operation no need for vacuum simplicity low cost no environmental or disposal concern and applicability to large area samples Although the emphasis in this book is on the utility of APP treatment for enhancement of polymer adhesion APP is also applicable and effective to modulate many other surface properties of polymers superhydrophilicity superhydrophobicity anti fouling anti fogging anti icing cell adhesion biocompatibility tribological behavior etc The key features of Atmospheric Pressure Plasma Treatment of Polymers Address design and functions of various types of reactors Bring out current and potential applications of APP treatment Represent the cumulative wisdom of many key academic and industry researchers actively engaged in this key and enabling technology

Contamination Mitigating Polymeric Coatings for Extreme Environments Christopher J. Wohl, Douglas H. Berry, 2020-05-15 This volume provides perspectives on the approaches mechanisms test methods durability considerations and environmental concerns for contamination mitigating coatings and polymers with emphasis on their use in more extreme aerospace and marine terrestrial environments Parts of the Volume are devoted to application of biomimetics to contamination mitigation polymeric coatings low ice adhesion surfaces insect residue adhesion resistance coatings and marine biofouling mitigation materials By juxtaposing ice insect and marine mitigation approaches researchers and users may more easily identify threads of similarity that will assist in future developments and potential applications in these areas The volume is of interest to chemists and material scientists in providing awareness of both the need for efficacy in mitigating contamination and for appropriate coating durability to physicists in providing better understanding of the

interaction between the contaminant the coated surface and the surrounding environment and to engineers in describing the need for better scale up tests between laboratory and field environments **Paper and Timber** ,2000 **Directory of Published Proceedings** ,2001 **Appita Journal** ,2008 TAPPI Advanced Coating Fundamentals Symposium 1999, Toronto ,1999
