## **Target Earth The Search For Rogue Asteroids And Doomsday Comets That Threaten Our Planet:**

**Target Earth** Govert Schilling, 2025-04-15 An acclaimed science writer tells the story of cosmic projectiles that may be on a collision course with our Earth The impact of an asteroid led to the extinction of the dinosaurs Could another giant cosmic missile soon be heading our way In **Target Earth** acclaimed Dutch astronomy writer Govert Schilling provides a full account of what we know and need to know about all the extraterrestrial matter constantly bombarding our planet from microscopic dust particles and space debris to massive meteorites comets and asteroids Drawing on the latest scientific discoveries Schilling explores virtually every aspect of cosmic impacts from small meteorites to devastating collisions from the craters that mark our planet's surface to the impacts that left their mark on other celestial bodies and from searches for near miss lumps of rock to ways of protecting humanity from an assault from the cosmos Along the way he considers near misses in the past and the possibility of others in the future and ponders the positive side of these visitations from space If our planet had not been the target of cosmic rubble from its very formation life on Earth would likely never have gotten started

Rejuvenating the Sun and Avoiding Other Global Catastrophes Martin Beech, 2007-11-24 This book is about an audacious idea asteroengineering literally the physical engineering of a star especially the star we call our Sun It is an idea on the grandest of scales Part science fiction part science fact asteroengineering is a response to a very definite and a very real problem a problem that our distant descendants will one day have to face It is also a universal problem that will be experienced at some stage or other by every extraterrestrial civilization that has or will exist Indeed the problem to be addressed resides within the parent stars of each and every supporting planetary system within our galaxy In short stars puff up to become luminous red giants as they age and by doing this they vaporize those planets previously situated in the habitability zone where life can otherwise thrive As their parent star ages and approaches the red giant phase a civilization has two options open to it stay at home or pack up and leave The latter option would require the hapless civilization to cocoon itself within giant spaceships and then set itself adrift in the uncharted depths of space If a civilization chooses to stay put however then all life will end unless that is something is done about the demise of its parent star **Meteorite Impact!**

**The Story of Earth & Life** Terence McCarthy, Bruce Rubidge, 2013-07-10 Geologically speaking southern Africa is without equal a treasure house of valuable minerals with a geological history dating back some 3 600 million years In addition the evolution of plants and animals especially mammals and dinosaurs is well preserved in the region which also probably has the best record of the origin of modern man This book provides a fascinating insight into that remarkable history how southern Africa and to some extent the world came to be the way it is how its mineral deposits formed its life evolved and its landscape was shaped Along the way readers will be enthralled by accounts of the Big Bang that marked the beginning of time and matter by drifting and colliding continents folding and fracturing of rocks meteors colliding with the Earth the time when the Earth froze over volcanic eruptions and the start of life Anyone interested in the landscape and ecosystems in which we live will be intrigued to discover how our natural landmarks were formed from the deserts of Namibia to the mountains of the Western Cape or Mpumalanga Why is South Africa so rich in minerals How did glacial deposits come to be found in the Karoo Why did dinosaurs become extinct How did mammals develop from reptiles How closely related are we to the apes The answers to many such questions are found in this lavishly illustrated volume The authors also suggest how we can learn from the past in order to anticipate the future for instance to be able to predict earthquakes deal with volcanic eruptions and meet the challenges of global climate change

Rogue Asteroids and Doomsday Comets Duncan Steel, 1997-09-22 Could a giant asteroid or comet crash into Earth and destroy life as we know it Many astronomers who once discredited the risks are now convinced You will be too after reading Duncan Steel's critically acclaimed examination of the evidence of Earth's encounters with killer comets and asteroids Acclaim for Rogue Asteroids and Doomsday Comets A chilling and utterly convincing account of a cosmic menace that must not be ignored any longer This book is a welcome challenge to the scientific prejudice against catastrophism Paul Davies author of The Mind of God Written in clear prose for the layperson this gripping report advocates the creation of an international search program to detect intercept and divert Earth menacing asteroids and comets Publishers Weekly Steel writes clearly and ominously and he should be listened to The Daily Telegraph London A selection of the Astronomy Book Club A Library Journal Best Science Book of the Year selection

Meteorite!, 2002     Journal of the British Interplanetary Society ,2001     **Cabinet Of Curiosities, A: The Myth, Magic And Measure Of Meteorites** Martin Beech,2021-03-05 Hurtling through the atmosphere in a blaze of light and reverberating percussions the arrival of a meteorite on Earth is a magical rare and precious sight These characteristics have accordingly ensured a long yet often controversial history For all this meteorites are cosmic messengers They tell us about the entire history of the solar system their story carrying us from the very earliest moments when solid material first began to form in the solar nebula Indeed meteorites played a key role in the origins of Earth s oceans and the genesis of life Meteorites additionally tell us about the origin and evolution of the asteroids and they tell us about impacts upon the Moon as well as the volcanic history of planet Mars Much is known about the structure and chemistry of meteorites but for all this they still harbor many scientific mysteries that have yet to be resolved     *Encyclopedia of Space Science and Technology, 2 Volume Set* Hans Mark,2003 The online edition of the Encyclopedia of Space Science and Technology representing an ambitious collection of the underlying physical principles of rockets satellites and space stations This state of the art reference outlines what astronomers know about the sun planets galaxy and universe as well as the effect of the space environment on human and other biological systems The Encyclopedia also provides an in depth summary of the engineering involved in launching a rocket or satellite and the control systems involved on the ground in orbit or in deep space Manufacturing in space from planetary and other resources is also discussed     *Subject Guide to Books in Print* ,1996

**Journal of Geoscience Education** ,2000     *Astronomical Odds* Geoffrey Sommer,2005 Addresses the cosmic impact hazard the threat to the Earth posed by asteroids and comets as an extreme example of a low probability high consequence policy problem This analysis presents a comprehensive framework for dealing with the technical and societal uncertainties surrounding the impact hazard It reviews the physical nature of the threat and both the history and mechanisms of society s response to the hazard dwelling on the social costs of false positives The author constructs an illustrative cost benefit model on the foundations of prior work with parameters of social response added and then varied to assess the robustness of a proposed policy intervention social reassurance by means of a demonstrated mitigation capability He concludes by noting that a common flaw of prior analysis is to give lip service to low probability and to focus instead on high consequence that there is frequent confusion between ex ante and ex post perspectives that uncertain costs are often treated as nonexistent

costs and that warning is a social function not a technical function and those who issue warnings of a given hazard should not stand to benefit from those warnings     **Astronomy Now** ,2001     *Constructing America at the Peripheries* James A.
