*What Is the Influence of the National Science Education Standards?* National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Science Education K-12, Steering Committee on Taking Stock of the National Science Education Standards: The Research, 2002-11-05. In 2001 with support from National Science Foundation the National Research Council began a review of the evidence concerning whether or not the National Science Education Standards have had an impact on the science education enterprise to date and if so what that impact has been. This publication represents the second phase of a three phase effort by the National Research Council to answer that broad and very important question. Phase I began in 1999 and was completed in 2001 with publication of *Investigating the Influence of Standards: A Framework for Research in Mathematics, Science, and Technology Education*. National Research Council 2002. That report provided organizing principles for the design, conduct, and interpretation of research regarding the influence of national standards. The Framework developed in Phase I was used to structure the current review of research that is reported here. Phase II began in mid 2001 involved a thorough search and review of the research literature on the influence of the NSES and concludes with this publication which summarizes the proceedings of a workshop conducted on May 10, 2002 in Washington DC. Phase III will provide input collected in 2002 from science educators, administrators at all levels, and other practitioners and policy makers regarding their views of the NSES, the ways and extent to which the NSES are influencing their work, and the systems that support science education and what next steps are needed.

*Human Systems Science In the Best Interest of the Child's Mental Health and Self-Awareness* Christopher K. Slaton EdD, 2025-06-27. Your Body wears trained states of Mind. Your Brain wears the Body which reveals the process states of your emotions. As energy, actions, and feelings traverse your Brain and Body, interaction, your senses transfer signals. This is because when the Body reacts, your Brain must send forward feedback from where you are in the Crisis of Self. The applied use of systems thinking led to human systems science as the study of the brain-body and sense events. Hence the applied use of human science led to the study of human cognitive and behavioral sciences. As a practitioner of human systems science, Christopher Slaton's interest has always focused on the study of human contact, human cognition, and human behavior. Human systems science fosters a child's capacity to learn who they are. This book aims to advance brain learning and the neurophysics of self by exploring the complex dance between a child's mental health and brain-body and sense messaging. Dr. Slaton decodes ways to foster a child's capacity to learn who they are within the context of self-research, self-help, and self-discovery in this volume of a new frontier of brain talk.
