Clinical Target Volumes in Conformal and Intensity Modulated Radiation Therapy Vincent Gregoire,Pierre Scalliet,Kie-Kian Ang,2013-06-29 Conformal radiation therapy represents a new challenge for radiation oncologists It offers the prospect of either increasing the radiation dose to target tissues while delivering a similar dose to organs at risk or reducing the dose to organs at risk while maintaining the dose to target tissues First lymph node areas at risk are established using the available data from pathological examination of surgical specimens and or pattern of locoregional relapse Then based on a three dimensional description of the anatomical regions where the areas at risk are located guidelines for the delineation of the clinical target volumes are proposed The data presented should enable the reader to make appropriate decisions regarding the selection and delineation of the target volumes when confronted with the most frequent tumor types and sites The book will contribute to paving the way for more effective radiation oncology in the twenty first century *Soft Tissue Sarcomas* Angelo Paolo Dei Tos,2018-12-06 A guide to overcoming diagnostic challenges faced by surgical pathologists in examining the varying classifications of soft tissue sarcomas

Predictive Biomarkers in Oncology Sunil Badve,George Louis Kumar,2018-12-06 Precision personalized or stratified medicine refers to the tailoring of medical treatment or drug administration to the individual characteristics of each patient treatment It does not literally mean that a pharmaceutical company makes a drug for an individual patient for consumption and treatment but rather means the ability to stratify or classify individuals into sub populations that differ in their responsiveness to a specific drug A marker that provides information on the likely response to therapy i e either in terms of tumor shrinkage or survival of the patient is termed predictive biomarker Despite their promise in precision medicine and the explosion of knowledge in this area there is not a

single source on this subject that puts all this evidence together in a concise or richly illustrated and easy to understand manner This book provides a collection of ingeniously organized well illustrated and up to date authoritative chapters divided into five sections that are clear and easy to understand Section one provides an overview of biomarkers introduces the basic terminologies definitions technologies tools and concepts associated with this subject in the form of illustrations graphics photographs and concise texts Several recent biomarker endeavors that have been initiated and funded by the National Cancer Institute National Institutes of Health FDA and other International organizations are presented Section two involves the signaling pathways controlling cell growth and differentiation altered in cancer This section analyzes how predictive biomarkers are altered expressed or amplified across cancer types Section three explores how predictive biomarkers play a role in patient stratification and tailored treatment in relationship to specific cancers In addition it includes discussion on the various precision medicine initiatives that are going on across the globe e g TARGET NCI MATCH BATTLE SHIVA etc Section four discusses a how pharmaceutical companies validate predictive biomarker assays and accompanying companion diagnostics either internally or externally with partner companies such as central laboratories or clinical research organizations and b how predictive biomarker tests fall under the oversight of US FDA Centers for Medicare Medicaid Services CMS and state laws Section five wraps up novel agents and targets that are being used as targets for cancer therapeutics The biomarkers associated with these protocols will also be presented Throughout the book sidebars special interest boxes and illustrations are used to explain terms that are either newly introduced uncommon or specialized Predictive Biomarkers in Oncology will serve as a definitive guide for practicing pathologists oncologists basic researchers and personnel in the pharmaceutical or diagnostic industry interested in learning how predictive biomarkers are used in precision cancer therapy

Target Volume Definition in Radiation Oncology Anca-Ligia Grosu, Carsten Nieder, Nils Henrik Nicolay, 2024-02-19 This updated edition of the book provides radiation oncologists with a structured state of the art guide to target volume delineation for all major cancer types It provides an overview of recent advances in radiation treatment techniques and multimodal imaging for radiation treatment planning It also offers clear and structured guidelines for the contouring of target volumes and organs at risk taking into account the available imaging modalities including PET CT and multiparametric MR imaging Each chapter addresses the target volume concepts of a particular tumor type and has been written by experts in the field Covering all major tumor entities the book provides practicing radiation oncologists with a guide to defining target volumes based on multimodal imaging

Target Volume Delineation for Conformal and Intensity-Modulated Radiation Therapy Nancy Y. Lee, Nadeem Riaz, Jiade J. Lu, 2014-12-08 This textbook is designed to help the busy radiation oncologist to accurately and confidently delineate tumor volumes for conformal radiation therapy including IMRT The book provides an atlas of clinical target volumes CTVs for

commonly encountered cancers with each chapter illustrating CTV delineation on a slice by slice basis on planning CT images Common anatomic variants for each tumor are represented in individual illustrations with annotations highlighting differences in coverage The anatomy of each site and patterns of lymphatic drainage are discussed and their influence on the design of CTVs is explained in detail Utilization of other imaging modalities including MRI to delineate volumes is highlighted Key details of simulation and planning are briefly reviewed Although the emphasis is on target volume delineation for conformal techniques information is also provided on conventional radiation field setup and design when IMRT is not suitable

Biology-Driven Targeted Therapy of Pediatric Soft-Tissue and Bone Tumors: Current Opportunities and Future Challenges Thomas G. P. Grünewald, Simone Fulda, 2016-04-05 Recent advances in the understanding of the biological basis of pediatric soft tissue and bone tumors especially owing to the advent of omics technologies have led to an exponential increase in the current knowledge on the genetic and cellular patho mechanisms that drive these diseases This offers the unprecedented opportunity to develop and implement targeted therapies such as monoclonal antibodies small molecules oncolytic viruses and immunotherapies in standard and or personalized treatment regimens However to date only a few examples document a successful translation of discoveries from the bench to the bedside Recent international expert congresses further emphasize the urgent need for a more rapid and especially more successful translational process Hence we strongly believe that a Frontiers Research Topic aiming at this aspect would fit just in time and be relevant for a broad readership This Frontiers Research Topic intended to provide a platform for active and interdisciplinary discussion to summarize current state of the art knowledge on all basic research and translational aspects in pediatric soft tissue and bone tumors and to offer new perspectives on how to further promote and accelerate the translational process It comprises high quality original articles and timely reviews
