be both alive and dead at the same time and a particle can be in two places at once And that particle is also a wave everything in the quantum world can be described in terms of waves or entirely in terms of particles These interpretations were all established by the end of the 1920s by Erwin Schrödinger Werner Heisenberg Paul Dirac and others But no one has yet come up with a commonsense explanation of what is going on In this concise and engaging book astrophysicist John Gribbin offers an overview of six of the leading interpretations of quantum mechanics Gribbin calls his account agnostic explaining that none of these interpretations is any better or any worse than any of the others Gribbin presents The Copenhagen Interpretation promoted by Niels Bohr and named by Heisenberg The Pilot Wave Interpretation developed by Louis de Broglie The Many Worlds Interpretation The Decoherence Interpretation The Ensemble Non Interpretation The Timeless Transactional Interpretation which theorized waves going both forward and backward in time All of these interpretations are crazy Gribbin warns and some are more crazy than others but in the quantum world being more crazy does not necessarily mean more wrong
